The main problems faced by scientists in
working with Big Data sets, highlighting

the main ethical issues, taking into account the legislation of the European Union. After a brief Introduction to Big Data, the Technology section presents specific research applications. There is an approach to the main philosophical issues in Philosophical Aspects, and Legal Aspects with specific ethical issues in the EU Regulation on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (Data Protection Directive - General Data Protection Regulation, "GDPR"). The Ethics Issues section details the specific aspects of Big Data. After a brief section of Big Data Research, I finalize my work with the presentation of Conclusions on research ethics in working with Big Data.

CONTENTS: Abstract 1. Introduction - 1.1 Definitions - 1.2 Big Data dimensions 2. Technology - 2.1 Applications - - 2.1.1 In research 3. Philosophical aspects 4. Legal aspects - 4.1 GDPR - - Stages of processing of personal data - - Principles of data processing - - Privacy policy and transparency - - Purposes of data processing - - Design and implicit confidentiality - - The (legal) paradox of Big Data 5. Ethical issues - Ethics in research - Awareness - Consent - Control - Transparency - Trust - Ownership - Surveillance and security - Digital identity - Tailored reality - De-identification - Digital inequality - Privacy 6. Innovation CreateSpace

In the present volume, I focus on a few aspects of the role played in your life by applied philosophy, philosophical practices, philosophical counseling and therapy. For this purpose, I am calling on the experience of thinkers devoted to philosophy and philosophical practice such as Lou Marinoff, Emmy van Deurzen, Aurel Codoban and others, as I believe that by presenting their ideas we can support understanding the importance of philosophical counseling in a communication-shaped world. The author

Johannine Christology CreateSpace

This book is open access and available on www.bloomsburycollections.com. It is funded by Knowledge Unlatched. Philosophy in a Meaningless Life

provides an account of the nature of philosophy which is rooted in the question of the meaning of life. It makes a powerful and vivid case for believing that this question is neither obscure nor obsolete, but reflects a quintessentially human concern to which other traditional philosophical problems can be readily related; allowing them to be reconnected with natural interest, and providing a diagnosis of the typical lines of opposition across philosophy's debates. James Tartaglia looks at the various ways philosophers have tried to avoid the conclusion that life is meaningless, and in the process have distanced philosophy from the concept of transcendence. Rejecting all of this, Tartaglia embraces nihilism ('we are here with nothing to do'), and uses

transcendence both to provide a new solution to the problem of consciousness, and to explain away perplexities about time and universals. He concludes that with more self-awareness, philosophy can attain higher status within a culture increasingly in need of it.

Cărți, albume, hărți Polimetrica s.a.s. The central focus of this volume is social constructionism in all its dimensions, including its sociological, ontological, epistemological, methodological, ethical, and pragmatic features. It pays particularly close attention to the social construction of reality as a communicative action, extending this area to include social pragmatics. It also interprets social action as a discursive-seductive strategy of exercising power in

the public space, utilising a constructionist understanding, in which public space is represented by any part of the co-construction of reality through social or communicative action. In addition, at the methodological level, the book proposes a new semiotic strategy, called "fractal constructionism", which analyses the interpretative drift of certain key concepts that are valued as social constructs.

National Library of Medicine Current Catalog Editura Lumen

"Functional neuroanatomy of the brain" gathers an immense material from different sources (books, papers, works of great neuroanatomists mentioned in the references etc.) and makes a precise and complete synthesis of the structure and functions of the brain, the most

complex system in the universe. The book starts with the history of neuroscience, data and ideas referring to soul, mind and brain, the way they have been imagined and conceived by healers, witches and philosophers since old times. On the other hand the book aims at revealing some basic and recent data about mind and brain, making them accessible to students, doctors, psychologists, biologists and all those interested in this vast topic and research field - the brain - who are studying by themselves. The first volume of "Functional neuroanatomy of the brain" has eight chapters, as it follows: HISTORY OF THE BRAIN AND MIND, INTRODUCTION IN THE NERVOUS SYSTEM, MEDULLA OBLONGATA (OR BULB), PONS, MIDBRAIN, RETICULAR

FORMATION, CEREBELLUM and DIENCEPHALON. The second part presents in nine chapters of detailed information: THE BASAL GANGLIA, LIMBIC LOBE AND LIMBIC SYSTEM, HIPPOCAMPAL FORMATION, AMYGDALA, OLFACTORY SYSTEM, GUSTATORY SYSTEM, FRONTAL LOBES, PARIETAL LOBE and TEMPORAL LOBES. At least the third part gathers essential information split in seven chapters: OCCIPITAL LOBE, WHITE MATTER OF CEREBRAL HEMISPHERE, CORPUS CALLOSUM, CEREBRAL CORTEX, VENTRICULAR SYSTEM AND MENINGES, CEREBRAL ASYMMETRY in nonhumans, THE NEURAL BASIS OF CONSCIOUSNESS. Even if this book is not written by a neuroanatomist, but it represents a textbook assembled by a genius of neurosurgery, with a huge

professional experiences, Academician Professor Doctor Leon Danaila, who describes himself some reasons of this special work: "As a neurosurgeon who has performed over 40 000 surgeries on the central and peripheral nervous system during my 50 years of continuous neurosurgical activity, I can comprehend the structural and functional complexity of the brain. In order not to disturb the highly functional areas of the central nervous system, I was forced to get familiar with the details of the brain map, which, taking into consideration my experience, varies from individual to individual, and I can say that each person, healthy or sick, is unique. I have been an assiduous reader of many books and papers in order to have a better documentation in this

area, but I could not find any manual or book to contain relatively complete and up-to-date information on the anatomy and physiology of the brain. The existing neuroanatomy textbooks are not thorough enough, in my opinion, as they do not explain the morphological and neurophysiological complexity of white and grey matter. To keep up with the vast literature in this research field, and with the investigations of the brain as a whole has been for me a real challenge or better said an impossible task, an unreachable goal. The clinical information has been of great help in understanding the basic scientific concepts and the way in which the central nervous system, especially the brain, operates and interacts in the presence of various internal and external

harmful factors, or in abnormal, pathological situations. Publishing this book concurs with an enormous explosion of knowledge about the morphology and physiology of the central nervous system and its vast reciprocal connections and plasticity. Consequently, I found it hard to keep up with the multitude of works published during the past ten years about functional neuroimaging, neuropharmacology, computational modulation, rehabilitation methods, theories of thinking, of memory, attention, frontal functions, language etc., as well as the structures and the immense number of neural connections and columns that build them. I keep the doors open to corrections, additions and novelty and, why not, to reinterpretation.

It's me who will do it or maybe others will do it better than I did."

Big Data Ethics in Research IGI Global
Romanian surgeon Leon Danaila is a revolutionary doctor in neurology, one of the most impressive and complex fields of study. Doctor Danaila has performed more than 40,000 brain surgeries during his lifetime and has published numerous articles and books as President of the Romanian Neurosurgery Society and a well-respected university professor. This mastermind offers vital information for all medical students interested in neuroscience. With books covering every aspect of neurology from the basic division of the brain stem to major neurological diseases, the most recent work of doctor Danaila is a must-have collection for all the medical school

libraries around the world. His work should be compulsory for medical graduates that wish to pursue a career in research or to practice general or brain surgery, so that they can keep up with the latest developments in the field of neurology. The premium learning pack includes the latest editions of the followings: Functional Neuroanatomy of the Brain, volumes I-III; Normal and Pathological Venous System of the Brain, volumes I-II; The Cells of the Brain: A review book; Cerebrovascular Abnormalities - A book-atlas of macroscopic and microscopic aspects research.

 Discover the latest edition of the cornerstone reference on periodontology and implant dentistry that combines scholarship and science with practical

clinical instruction The Seventh Edition of Lindhe's Clinical Periodontology and Implant Dentistry brings together a distinguished team of periodontal specialists and academics who deliver another must-have resource for students, researchers, and practitioners specializing in periodontal care and implant dentistry. Seamlessly integrating the foundational science behind periodontology with practical clinical protocols in two comprehensive volumes, the chapters cover anatomy, microbiology, occlusion trauma, pathology, tissue regeneration, treatment planning protocols, infection control, reconstructive therapy, occlusal and prosthetic therapy, and more. The Seventh Edition of Lindhe's Clinical Periodontology and Implant Dentistry:

Provides an introduction to anatomy, including periodontal tissues, the edentulous ridge, the mucosa at teeth and implants, and osseointegration
Discusses the epidemiology of periodontal and peri-implant diseases
Explores the microbiology, including dental biofilms and calculus, periodontal infections, peri-implant infections, the pathogenesis of gingivitis and periodontitis, and the genetic susceptibility to periodontal disease
Includes the latest perio- and peri-implant disease classifications
Contains updated evidence-based preventive and treatment modalities for the treatment of periodontal and peri-implant diseases
Features the latest evidence-based therapeutic alternatives on the use of dental implants to rehabilitate the lost

dentition Perfect for postgraduate dental students, researchers, and practitioners specializing in periodontal care and implant dentistry, Lindhe's Clinical Periodontology and Implant Dentistry continues to be the cornerstone reference work on periodontology.

This book summarizes basic knowledge of atomic, nuclear, and radiation physics that professionals need for efficient and safe use of ionizing radiation.

Concentrating on the underlying principles of radiation physics, it covers prerequisite knowledge for medical physics courses on the graduate and post-graduate levels, providing the link between elementary physics on the one hand and the intricacies of the medical physics specialties on the other.

Edited by Drs. Mathes and

Hentz in its last edition, this six-volume plastic surgery reference now features new expert leadership, a new organization, new online features, and a vast collection of new information - delivering all the state-of-the-art know-how you need to overcome any challenge you may face. Renowned authorities provide evidence-based guidance to help you make the best clinical decisions, get the best results from each procedure, avoid complications, and exceed your patients' expectations. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Compatible with Kindle®, nook®, and other popular devices. Apply the very latest advances in every area of plastic surgery and

ensure optimal outcomes with evidence-based advice from a diverse collection of world-leading authorities. Master the latest on stem cell therapy, tissue engineering, and inductive therapies • aesthetic surgical techniques and nonsurgical treatments • conjoined twin separation and other craniofacial surgery advances • microsurgical lymphatic reconstruction, super microsurgery, and sternal fixation • autologous lipofilling of the breast • nerve transfers in hand surgery, hand allotransplantation, and functional prosthetics • and much, much more. Easily find the answers you need with a new organization that features separate volumes covering Principles • Aesthetic • Craniofacial, Head and Neck Surgery • Lower Extremity, Trunk and Burns • Breast • and Hand and Upper

Extremity, plus a more templated, user-friendly, high-yield presentation. Visualize procedures more clearly through an abundance of completely redrawn full-color illustrations and new color clinical photographs. Access the complete, fully searchable contents of each volume online, download all the tables and figures, view 160 procedural videos, and take advantage of additional content and images at www.expertconsult.com!

Social Construction of Reality as Communicative Action McGraw-Hill/Glencoe

This book gathers the proceedings of the 13th International Conference on Management Science and Engineering Management (ICMSEM 2019), which was held at Brock University, Ontario,

Canada on August 5–8, 2019. Exploring the latest ideas and pioneering research achievements in management science and engineering management, the respective contributions highlight both theoretical and practical studies on management science and computing methodologies, and present advanced management concepts and computing technologies for decision-making problems involving large, uncertain and unstructured data. Accordingly, the proceedings offer researchers and practitioners in related fields an essential update, as well as a source of new research directions.

formare si dezvoltare Bloomsbury Publishing

Authored by the foremost experts in the field, this compact reference serves the

student and clinician by relating basic science to successful treatment planning. It demonstrates how the best instrument in dental medicine is often the practitioner's knowledge of the body's biologic growth principles. Donald H. Enlow, MS, PhD, the acknowledged pioneer and research leader in facial growth study for the past twenty years, provides comprehensive insights into normal and abnormal craniofacial growth and development. His colleague, Mark G. Hans, DDS, MSD, contributes a concrete understanding of the importance of these concepts in clinical practice. It delves into the interrelationships between soft tissue and skeletal growth, and examines the impact of function upon development. And it stresses the ways in which these biological principles

and concepts affect treatment planning, selection, results, relapse, tooth movement, and nonbiological prosthetic implants during growth. Detailed illustrations make key concepts and developmental processes simple to grasp, and a user-friendly organization allows for quick comprehension and convenient referral.

Expert Consult - Online Cambridge Scholars Publishing

Covering the core clinical specialties, the Oxford Handbook of Clinical Specialties contains a comprehensive chapter on each of the clinical areas you will encounter through your medical school and Foundation Programme rotations. Now updated with the latest guidelines, and developed by a new and trusted author team who have contemporary

experience of life on the wards, this unique resource presents the content in a concise and logical way, giving clear advice on clinical management and offering insight into holistic care. Packed full of high-quality illustrations, boxes, tables, and classifications, this handbook is ideal for use at direct point of care, whether on the ward or in the community, and for study and revision. Each chapter is easy to read and filled with digestible information, with features including ribbons to mark your most-used pages and mnemonics to help you memorize and retain key facts, while quotes from patients help the reader understand each problem better, enhancing the doctor/patient relationship. With reassuring and friendly advice throughout, this is the ultimate

guide for every medical student and junior doctor for each clinical placement, and as a revision tool. This tenth edition of the Oxford Handbook of Clinical Specialties remains the perfect companion to the Oxford Handbook of Clinical Medicine, together encompassing the entire spectrum of clinical medicine and helping you to become the doctor you want to be.

Gentle Non-Invasive Methods for Healing Cavities and Creating Strong Healthy Teeth Springer

Johannine Christology explores the formation of Christology in the Fourth Gospel, the Hellenistic and Jewish contexts, the literary character of these writings, and Christology's application for various audiences.

An Initial Assessment of Romania's

Lobbying Potential in the View of EU Membership W B Saunders Company

This comprehensive resource presents all aspects of endodontics, both surgical and nonsurgical. The very latest materials and methods used in providing endodontic treatment are explained thoroughly and effectively -- and are highlighted visually through the generous use of illustrations, many in full-color. Key topics include diagnosis, access, working length determination, instrumentation, obturation, retreatment of failed nonsurgical cases, flap design, root-end resection, crypt management, root end filling, post and core techniques, and core placement. Case examples with full-color clinical photos. Detailed discussion of diagnosis and treatment planning Comprehensive

coverage of restoration with case examples Discussion of traumatic injury with case examples of many types of injury Chapter devoted to legal considerations Concise, orderly approach to procedures Coverage of state-of-the-art techniques and materials such as the newer methods of digital radiography

and electronic apex locators, and nickel-titanium files Full-color format Contributions from world renowned authorities
