A beginner's guide to Hydroponics gardening - Life is a Garden

A growing medium is simply the material that supports the roots of the plant and keeps it upright. In traditional gardening, soil is the most common growing medium. In hydroponics, most inert substances (ie difficult to break down) can be used to host the roots. Common hydroponic mediums include Rockwool, perlite, gravel, sand and coconut fibre.

Hydroponics - A Beginners Guide | DIY Garden

The modern concept is that hydroponics means growing plants without soil. However, a more accurate definition is growing plants by supplying all necessary nutrients in the plants water supply. Hydroponics Technology does not use soil, instead the root system is supported using an inert medium such as perlite, rockwool, clay pellets, peat moss, or vermiculite.

Hydroponics - optimal growing conditions. The term hydroponics derives from the Greek words for water (hydro) and work (ponos) - "working with water". In a hydroponic system plant roots do not grow in soil, but in nutrient-enriched water. This is how it works.
