### Cases of Conflict Food & Agriculture Org.

The United Nations Framework Classification for Resources (UNFC) is a project-based classification and management system applicable to all energy and mineral resource projects including renewable energy, anthropogenic resource projects as well as injection projects for geological storage. Since the adoption of the Sustainable Development Goals (SDGs), managing energy and raw material resources in a sustainable manner has become paramount to all stakeholders such as Governments, companies and investors. This has to be viewed along with the Paris Climate Accord, which seeks low-carbon pathways in the appropriate developmental strategies. Successful resource management in the modern world requires relevant information on the resource base, understanding of the factors that are responsible for progressing the resources to production, adequate framework conditions set by the regulators and society and the enterprising capacity. A series of case studies on various resource projects from different countries are presented in this report to demonstrate how UNFC could be used for sustainable resource management.

### The University of Virginia Record IGI Global

The degradation of ecosystems, including forests, and the associated loss of biodiversity, particularly due to human-induced threats and climate change, has gained increased attention from scientists and policymakers. The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well-being to the impacts on ecosystems of changes in natural resources. The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity, supporting the idea that economic instruments – if appropriately applied, developed and interpreted – can inform policy- and decision-making processes. Only a few ecosystem services, however, have explicit market value and are traded in open markets: many – especially those categorized as having “passive-use” value – remain invisible and are rarely accounted for in traditional economic systems. The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity. Most ecosystem services are considered public goods and tend to be overexploited by society. Many methods have been applied to the economic valuation of ecosystem services. The use of these methods, as well as the interpretation of their results, requires familiarity with the ecological, political, normative and socio-economic context and the science of economics. Recognizing, demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well-being. The aim of this manual is to enhance understanding of ecosystem services and their valuation. The specific target group comprises governmental officers in planning units and field-level officers and practitioners in key government departments in

Bangladesh responsible for project development, including the Ministry of Environment and Forests and its agencies. Most of the examples and case studies presented herein, therefore, are tailored to the Bangladesh context, but the general concepts, approaches and methods can be applied to a broad spectrum of situations. This manual focuses on valuing forest-related ecosystem services, including those provided by trees outside forests. It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making. Among other things, the manual explores the basics of financial mathematics (e.g. the time value of money; discounting; cost-benefit analysis; and profitability and risk indicators); the main methods of economic valuation; examples of the valuation of selected ecosystem services; and inputs for considering values in decision making.

*Squandering America's Future—Why ECE Policy Matters for Equality, Our Economy, and Our Children* Springer Nature

The 'Addressing forestry and agroforestry in National Adaptation Plans: Supplementary guidelines' provide specific guidance for national adaptation planning in the forestry sector. They are intended to be used by national planners and decision-makers working on climate change issues in developing countries and authorities and experts who are contributing to climate change adaptation and NAP formulation and implementation.

*Recommendations on the Transport of Dangerous Goods* Asian Development Bank

Cases of Conflict focuses on times of dispute as important moments in the development of international environmental law. Conflict tests international law—both its content and its relevance become clearer in times of controversy—but conflict can also help shape the law. Drawing from a growing body of scholarship connecting the fields of international relations and international law, Cases of Conflict examines six prominent case studies to demonstrate how transboundary disputes have influenced the development of international environmental law and policy. Embracing their rich detail and real-world messiness, this book looks to develop a better understanding of the true content and potential of international environmental law.

*Addressing forestry and agroforestry in National Adaptation Plans* OECD Publishing

This volume presents the main environmental security challenges facing transition countries as well as practical methods and approaches for addressing them, which are equally applicable to all countries. Coverage also details lesson learned as illustrated via research and case studies as well as issues related to metals in the environment.

*Early Childhood Education and Care in a Global Pandemic* Springer Science & Business Media

Early Childhood Education and Care in a Global Pandemic is a book that highlights how the international early childhood education and care sector responded to the global COVID-19 pandemic. It shows the resiliency of the sector around the world as it grappled with a rapidly changing environment of uncertainty and complexity. Drawing on a diverse range of early childhood education and care contexts, the book captures real-life examples of how COVID-19 impacted children, educators and teachers, and families. Chapters present cases of the particular challenges that

COVID-19 presented in a wide range of countries and then how they responded to these challenges – challenges that tested the resilience of children, educators and teachers, and families. By forward anchoring, each chapter examines the opportunities that arose from these challenges and how new local knowledge was produced as new ways were found to support children, educators and teachers, and families during this time. This book offers early childhood education and care a timely resource on lessons learnt from a once-in-a-lifetime event. It offers the sector a way forward to commit to developing new ways of thinking and working that stem from the lessons learnt during the COVID-19 pandemic.

*Professional Learning in Early Childhood Settings* Routledge

In higher education, case studies can be utilized to have students put themselves into problems faced by a protagonist and, by doing so, address academic or career-related issues. Working through these issues provides students with an opportunity to gain applied perspective and experiences. Professors in higher education who choose this method of teaching require navigational tools to ensure that students achieve stated learning objectives. *Case Study Methodology in Higher Education* is an essential research publication that focuses on the history and theories relating to case study methodology including techniques for writing case studies and utilizing them in university settings to prepare students for real-life career-related scenarios. This publication features a wide range of topics such as educational leadership, case writing, and teacher education. It is essential for educators, career professionals, higher education faculty, researchers, and students.

*Research Anthology on Ecosystem Conservation and Preserving Biodiversity* Routledge

The technical problems confronting different societies and periods, and the measures taken to solve them form the concern of this annual collection of essays. Volumes contain technical articles ranging widely in subject, time and region, as well as general papers on the history of technology. In addition to dealing with the history of technical discovery and change, *History of Technology* also explores the relations of technology to other aspects of life -- social, cultural and economic -- and shows how technological development has shaped, and been shaped by, the society in which it occurred.

**History of Technology Volume 12** Bloomsbury Publishing

This book provides a basic understanding and state-of-the-art of urban metabolism. Urban centres are increasingly challenged by population increase and the resultant environmental concerns including the urban sprawl and climate change. Different patterns of urbanization contribute to the changing climate via differences in their urban metabolism represented by energy and matter. Urban metabolic studies in terms of energy and material inflows, outflows, and stocks can be associated with traditional evaluation techniques to help assess the magnitude and potential effects of variety of environmental challenges the world is facing today. Urban centres are critical real time observatories that indicate the impact anthropogenic activities have on global biogeochemical cycles. Urban processes have significant and lasting impacts on the global carbon budget. The technological and infrastructural advancements have fuelled an increase in urban inputs and outputs of material and energy. Therefore, more sustainable approaches need to be adopted in changing scenarios for urban planning, particularly for sustainable resource utilization and better waste management practices. The book emphasises on the sustainability in urban metabolism,

sustainable urban planning, ecosystem services, and disaster resilience to provide an interdisciplinary understanding of urban metabolism. The book also identifies an urgent need to develop new methodological approaches for real time and reliable evaluation of urban metabolism.

**Resources in Education** Kogan Page Publishers

Despite the widespread use of brick construction throughout the world, there has been no major investigation into its deterioration and durability. This book provides the results of a major international study led by West Germany which examines the causes of decay in addition to the treatment and methods of conserving brickwork and historic mortars. The deterioration mechanisms discussed cover bio deterioration, salt damage and the effects of air pollutants and moisture on masonry. Considerable attention is also devoted to historic mortars and renders, their analysis, behaviour under the stress of air pollution and the development of compatible modern formulations. Conservation methods for brick masonry, including de-salination, protective coatings and injection grouting are examined in detail. A useful and extensive range of case study material is also provided. This volume represents the most comprehensive, state of the art overview of the conservation of historic brick masonry, and will be an invaluable source of reference for all conservation practitioners and researchers working in this field.

*Conservation of Historic Brick Structures* BoD – Books on Demand

With considerable turmoil in international trade and logistics it is more important than ever to understand trade and customs issues and their impact on logistics operations. At every port and border international freight operations are exposed to trade and customs procedures. *Cross-Border Logistics Operations* serves as a comprehensive guide and companion to the cross-border trade and customs environment and its implications for international business supply chains and their control. Inspired by the World Customs Organization's Professional Standards (also known as the WCO PICARD Standards), it provides key insights into transporting goods across borders and effectively managing the requirements for compliance and enforcement. International students, business operators and government officials will find the book rich in detail with practical examples that include the political, administrative, regulatory, technological and economic context throughout. It covers all the critical operational and legal aspects of cross-border logistics operations, including: - prevailing trade, customs and border policy -tariffs and import taxes -border management and supply chain security practices -prohibitions and restrictions -enforcement and compliance practices -supply chain and logistics arrangements -disaster relief operations -frictionless trade and trade facilitation principles.

*Application of the United Nations Framework Classification for Resources* IGI Global

Human rights and the environment have become increasingly interconnected. This updated manual seeks to contribute to a better understanding of this relationship by taking into account the new pertinent case law of the European Court of Human Rights. While the European Convention on Human Rights does not guarantee a specific right to a healthy and sound environment, the general standards deriving from it may nonetheless also apply to environmental matters. The European Court of Human Rights regularly examines complaints in which individuals argue that a breach of their Convention rights is the result of adverse environmental factors. This manual also takes account of the relevant decisions of the European Committee of Social Rights which has interpreted

the right to protection of health under the European Social Charter as including a right to a healthy environment. Examples of good national practices have been compiled on the basis of the contributions of several member states and included in an appendix to the manual. The aim is to present the emerging principles on environmental protection in a systematic and accessible way. *Graduate Catalog* University of Toronto Press

The OECD Due Diligence Guidance for Responsible Supply Chains in the Garment and Footwear Sector helps enterprises implement the due diligence recommendations contained in the OECD Guidelines for Multinational Enterprises along the garment and footwear supply chain.

*Strategies to Enhance Environmental Security in Transition Countries* Food & Agriculture Org.

Little research exists on teacher dispositions, yet accrediting bodies such as the Council for the Accreditation of Educator Preparation (CAEP) require dispositional assessment as an integral part of teacher preparation programs. Furthermore, research has shown that dispositions are a key indicator in teacher success both in terms of instructional effectiveness and long-term retention.

Teacher preparation programs require research examples and support in understanding the desired dispositions of teachers as well as how to implement these qualities and characteristics into a robust curriculum. Teacher preparation programs also need help in articulating how to assess dispositional traits of teachers and how to provide remediation in this area. *Dispositional Development and Assessment in Teacher Preparation Programs* addresses dispositional development for teachers including the definition, instruction, practical application, and assessment of dispositional traits. It includes research involving teacher development and preparation for the enhancement of instructional practices and teacher retention. Covering topics such as culturally relevant pedagogy, social emotional learning, and teaching philosophy, this premier reference source is an excellent resource for preservice teachers, teacher preparation programs, faculty and administration of K-12 and higher education, academic libraries, accrediting bodies, researchers, and academicians.

*Undergraduate Announcement* Council of Europe

"Using case studies from the full range of educational institutions, this book provides an analytical overview of the quality debate in British education, illuminating the evolution of one of the most prevalent and forceful cultural phenomena in contemporary education. Lessons are learned from quality improvement in industry and public service, and the case studies show how procedural approaches like TQM, IIP and BS 5750 are being adapted to the educational context. Directed towards all involved in educational management, the book is of particular value those responsible for initiating and monitoring improvement in their institutions."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

*Quality Improvement in Education* Bloomsbury Publishing

"This remarkable book manages to pinpoint the critical issues in the care and education of young children with up-to-date research, and all of this in a pleasurable and lively style. This needs to be read widely, and right away." —Deborah Meier, MacArthur award-winning public school teacher, principal, and author "An ambitious book, unlike any other in early childhood policy . . . a must-read for all who care about kids." —Nancy Carlsson-Paige, professor emerita, Lesley University "Susan Ochshorn . . . shows us how a few dedicated people, schools, agencies, and institutions have made a difference in children's lives—a difference that is enhancing early development in this generation

and those to come." —Samuel J. Meisels, founding executive director, Buffett Early Childhood Institute University of Nebraska "Indispensable for policymakers, educators, and all who care about our future." —Riane Eisler, social scientist, attorney, and author "Sharp eyed, warm, and lively—a delightful read on a dead-serious topic." —Janet Gornick, professor of political science and sociology, City University of New York "An urgent call to action that could change the course of the nation's future." —Linda Darling-Hammond, Charles E. Ducommun Professor of Education, Stanford University "A kaleidoscope of stories and statistics to illustrate the profound injustices we are visiting on our children and the corresponding injuries we are inflicting on ourselves. We can only hope that Squandering America's Future will help to turn the tide." —Anne-Marie Slaughter, President and CEO, New America

*Conflicted Memories* Teachers College Press

The publication establishes a framework for a satellite account on education and training and discusses the methodology and the necessary data sources. The work was supported by pilot testing in 5 five countries with different circumstances and organization of the education system. An important aim of the guidelines is to help countries construct internationally comparable satellite accounts and thus, lead to improved cost-based measurement of human capital.

**Recommendations on the Transport of Dangerous Goods: Model ...** IGI Global

This book was inspired by the inaugural National Roundtable on Environmental and Sustainability Education in Canadian Faculties of Education (Roundtable 2016), which took place June 14-16, 2016, at Trent University in Peterborough, Ontario. Roundtable 2016 brought together over seventy participants from across Canada, including educators, researchers, policy-makers, consultants, and community organizations. Over the course of three days, participants took part in keynote addresses, research colloquia, networking socials, and collaborative inquiry activities focused on Environmental Sustainability Education in Teacher Education (ESE-TE). Roundtable 2016 resulted in the publication of a National Action Plan containing action-oriented recommendations for enhancing ESE-TE, and a position statement titled "The Otonabee Declaration," where delegates articulated their views regarding environmental degradation, the critical need for enhancing ESE-TE, and, the role educators, children, youth, educational institutions, policy makers, and Indigenous communities play in enhancing ESE-TE in Canada. This volume concludes with a discussion placing current Canadian ESE-TE theory and practice within an international context.

*International Commerce* BRILL

In today's rapidly evolving world, it has never been more critical to consider key environmental issues such as climate change, pollution, and endangered species. Society faces an unknown future where the fate of the environment is continuously in flux based on current preservation initiatives that governments develop. In order to ensure the world is protected moving forward, further study on the importance of securing environments, ecosystems, and species is necessary to successfully implement change. The Research Anthology on Ecosystem Conservation and Preserving Biodiversity considers the best practices and strategies for protecting our current ecosystems as well as the potential ramifications of failing to implement policies. Society is at a crossroads where if we continue to ignore the danger and warning signs brought about by environmental issues, we will be unable to maintain a healthy environment. Covering essential topics such as extinction, climate

change, and pollution, this major reference work is ideal for scientists, industry professionals, researchers, academicians, policymakers, scholars, practitioners, instructors, and students.
