This gives the equation for the ideal straight line as: $E_L(T) = 52.17 \cdot T$ (in μV). However, the example in the book is wrong, so a better solution would be based on $E(400) = -22131 \times 10^{-6} \text{ V}$, which gives $K = -22131$ Solutions - Luleå University of TechnologyDownload Solution Manual For Principles Of Measurement Systems By ... book pdf free download link or read online here in PDF.
