A Review of "good Soldier" Activity in Organizations Emerald Group Publishing

This book presents the current state of knowledge concerning developments in organisational behaviour and human capital management in the new millennium. It features an in-depth study among managerial staff in the manufacturing sector in Malaysia to reflect employee perceptions of organisational justice, organisational citizenship behaviour, job satisfaction and manager-employee exchanges. Specifically, it seeks to establish the relationships between these constructs to better manage human capital. With globalisation and the increased career mobility of young talents, organisational citizenship behaviour is of paramount importance in order to retain these workers. The

study's greatest contribution is its identification of key indicators that influence organisational citizenship behaviour. Knowing which type of organisational justice is salient for each construct allows the management to proactively improve conditions at the workplace. In essence, this book is intended to draw attention to those aspects of managing human capital that ought to receive the most attention, but are often overlooked in practice. In light of ongoing global challenges, it seeks to improve governance at the workplace. It offers a valuable resource for researchers and practitioners alike, as well as graduate students writing their dissertations.

These articles describe ideas about contextual performance, organizational citizenship behavior (OCB), and similar patterns of behavior that have been developed by scholars working from very different research traditions. It seems that the different research traditions are converging on the same notion--that

besides formal job requirements, other patterns of behavior are also critical for organizational effectiveness and survival. These other patterns of behavior have been relatively ignored until recently, but now scholars are trying to define them, determine exactly why and how they are important for organizations, and identify their antecedents. The results of these research efforts--described by articles in this issue--will help to make it possible to develop new conceptual and practical tools for managing these important behaviors and in that way promote human performance and organizational effectiveness.

This book not only integrates the growing body of research and theory on charismatic leadership, but also pushes back the frontiers of our knowledge by introducing new theories and insights. The authors present a comprehensive model of the charismatic leadership process. The model is documented by extensive empirical research and richly illustrated with case examples of corporate leaders.

This book represents a ground-breaking attempt to assess the impact of public employees' perceptions on public sector performance in a Latin American and Caribbean context. It opens a window to a generally ignored public sector by illustrating the extent to which public employees' engagement in citizenship behaviors affect their organizations, as well as how these interdependent relationships underpin actual performance. It offers penetrating insights on public service motivation, transformational leadership, and employee satisfaction and trust. Apart from the psychological insights, this study also establishes a bridge for scholars to undertake comparative studies of public sector performance globally.

Bringing together several key elements needed to identify the most promising themes for future research in selection and classification, this book's underlying aim is to improve job performance by selecting the right persons and matching them most effectively with the right jobs. An emphasis is placed on current, innovative research approaches which in some cases depart substantially from traditional approaches. The contributors -- consisting of professionals in measurement, personnel research, and applied and military psychology -- discuss where the quantum advances of the last decade should take us further. Comprehensive coverage of the selection and classification domain is provided, including a broad range of topics in each of the following areas: performance conceptualization and measurement, individual differences, and selection and classification decision models. The presentations in each of these areas are integrated into a set of coherent themes. This integration was the product of structured group discussions which also resulted in a further evolution of some of the ideas presented.

This new volume is the first to bring together social and organizational psychologists to explore social identity theory in organizational contexts. The chapters are wide ranging - they deal with basic social identity theory, organizational diversity, leadership, employee turnover, mergers and acquisitions, organizational identification, cooperation and trust in organizations, commitment and work, and socialization and influence within organizations. This book is an integrative platform for a closer relationship between social psychologists and organizational psychologists who study social identity

processes in organizations.

How do the attitudes people bring with them to the workplace-attitudinal baggage-affect thoughts, feelings, and actions in organizations? How are the attitudes of those outside an organization (stockholders, customers, suppliers, government officials, and the public-at-large) affected by the organization? *Attitudes In and Around Organizations* provides a concise summary of what we know about attitudes and suggests what we might discover by adopting novel means, both conceptual and methodological, for studying attitudes in and around organizations. Arthur P. Brief provides an overview of the job satisfaction literature, including a redefinition of job satisfaction. In addition, he examines the various means by which attitudes have been measured, attitude formation and change, and the resistance of attitudes to change efforts. Groups whose attitudes are organizationally relevant (customers, for example) are examined in order to illustrate how organizations affect the attitudes of people beyond their boundaries and to determine how organizations can influence salient attitudes in their environments. The concluding chapter offers the reader a view of the future and suggests ideas for future research. Students, researchers, consultants, and organizational decision makers will find this a relevant, engaging, and thought-provoking resource.

Master's Thesis from the year 2019 in the subject Art - Arts Management, grade: very good, Arba Minch University (Arba Minch university), language: English, abstract: This research aims to investigate the effect of perceived organizational support on employee organizational citizenship behavior in the case of academic staffs of Arba Minch University. For the sake of achieving the objectives of this study, the information gathered through questionnaire from 282 respondents were analyzed using statistical analysis. The respondents were selected using stratified sampling followed by a simple random sampling technique. The most important findings of this study is that perceived organizational support has a positive and significant effect on organizational citizenship behavior. Results revealed that there is a significant difference between male and female academic staffs towards exhibiting organizational citizenship behavior and insignificance difference found on dimensions of perceived organizational support. Moreover, there is a significant difference in the perception of supervisory support, procedural justice, career development opportunities, decision-making involvement and exhibition of organizational citizenship behavior based on education level. The result of the Pearson correlation coefficient analysis showed that perceived organizational support dimensions have a significant and positive relationship with organizational citizenship behavior. The results of multiple linear regression showed that the best predictor of organizational citizenship behavior had been supervisory support. Based on findings, recommendations to Arba Minch university management and suggestions for other researchers are forwarded. Keywords; perceived organizational support, organizational citizenship behavior

Citizenship and Management in Public Administration is an exciting journey into the nexus between two separate but close worlds: citizenship orientations and citizenship behavior as reflected in political science theory on one hand, and organizational sciences, work studies, management, and public administration on the other. The authors have combined theoretical thinking with empirical findings to support their

theories, and the data presented has been collected over almost a decade of field studies and surveys of public organizations. Dealing with the nature and meaning of citizenship, this book looks at behavior and involvement in modern public worksites. The interdisciplinary studies are all concerned with achieving better integration of the theories and ideas on citizenship and bureaucracies, which are more frequently treated as independent domains in the social sciences. However, the authors suggest that they are closely related and should be analyzed in relation to one another. This unique book will appeal to academics of management and organizational behavior, public administration and those involved in researching the not-for-profit, or third, sector.

Examining Psychological and Contextual Perspectives Oxford University Press

During the last fifteen years, researchers have shown increasing interest in the exchange relationship between the employee and employer. Until now, the literatures examining the employment relationships have tended to operate either from the employer or the employee perspectives and have typically approached the topic from a single discipline be it psychology, sociology, human resource management, organizational behavior, industrial relations, law or economics. Failure to consider multiple perspectives has created a fragmented understanding of the employment relationship. This volume incorporates social exchange, economics, industrial relations, legal, and justice theory perspectives. In addition, chapters have been written by authors that reflect the full international body of research on the employment relationship and provide information about legislation, governance, and cultural differences across nations. The conceptual and empirical foundations for understanding the employment relationship from these different theoretical perspectives facilitates the establishment of the convergent and discriminant validity of the psychological contract and the investments-contributions models of the employment relationship in relation to related exchange constructs such as perceived organizational support and leader-member exchange. The interdisciplinary and international nature of the employment relationship literature reviewed and integrated in this volume provides richness that is rarely available in studies of the workplace, and many new and provocative ideas are presented in this volume. Bringing these perspectives together provides greater comprehensiveness, clarity, synthesis and understanding of the employment relationship. This volume is designed to promote the thinking of scholars in the employment relationship area. It will also have relevance to practitioners primarily through the implications of this multi-disciplinary perspective. The volume offers implications of a holistic, multi-disciplinary, international, conceptualization of the employment relationship for theory development, empirical research and measurement, and policy.

Current models of corporate citizenship largely consider business as one coherent entity. This view of business as a corporate force overlooks the growing evidence that most businesses are run by families. Family businesses are the most common form of business in existence – across countries, continents and geopolitical divides – and yet we know remarkably little about their approach to corporate citizenship. Where families run businesses, they create a concentration of family values that – for good or ill – influence the way business practices and behaviours develop. The role of the family in business has, therefore, an influence on the development of society that is partially mediated through corporate citizenship. This book pulls together current thinking from several diverse research fields that intersect with

family business research to offer insight into current research and examples of practice for those studying and researching in the fields of family business, business values and corporate practice. The book will also explore the fact that family businesses tend to take a longer-term approach to business and that this is reflected in their behaviour towards the environment, community engagement, employee development and innovation. Bringing together contributions from researchers in the diverse fields of family business, philanthropy, community engagement, corporate social responsibility, innovation and policy, this book explores the many ways in which family businesses contribute to the corporate citizenship agenda.

The predictors of organizational citizenship behavior (OCB) - performance that supports the social and psychological environment in which task performance takes place - have been studied extensively in previous research. Surprisingly, only a few studies have looked into OCB's effects on individuals who might benefit from it. The purpose of the current study was to explore effects of individual-level OCB on its recipients. Reception of OCB (ROCB) is described and proposed to be related to targets' performance, job stress and job strains. In addition, narcissism and proactive personality were explored as predictors of reception of OCB also as moderators of the relationships between reception of OCB and job-related outcomes. I sampled 372 employed students through online surveys. Results showed that ROCB is positively related to the recipients' proactive personality, narcissism, overall job performance, organizational citizenship behavior, job satisfaction, organizational affective commitment, and negatively associated with recipients' work interfere with family and turnover intention. Moreover, the study found no moderating effects of proactive personality or narcissism on these relationships. It was showed that ROCB is an important construct that needs to be taken into account in future organizational studies since it has significant relationships with other commonly studied organizational variables. Future studies should try to replicate the current results using different samples. Moreover, longitudinal design should be used to study the casual relationships between ROCB and organizational variables.

Why do so many people volunteer to help others in need in society today? What makes people give up the convenience of driving their car to benefit a better environment? And why are citizens, in general, quite prepared to pay taxes to ensure adequate health care, and support for the elderly and unemployed? These are examples of a more fundamental question addressed in this book: why do people cooperate for the welfare of their community, state, or organization? Cooperation in Modern Society is a unique collection of contributions from internationally reputed scholars across the social sciences.

The book consists of 35 extended chapters which have been based on selected submissions to the poster session organized during the 3rd Asian Conference on Intelligent Information and Database Systems (20-22 April 2011 in Daegu, Korea). The book is organized into four parts, which are information retrieval and management, data mining and computational intelligence, service composition and user-centered approach, and intelligent management and e-business, respectively. All chapters in the book discuss theoretical and practical issues related to integration of artificial intelligence and database technologies in order to develop various intelligent information systems in many different domains. Such combination of artificial intelligence and database technologies has been regarded as one of the

important interdisciplinary subfields of modern computer science, due to the sustainable development of networked information systems. Especially, service-oriented architecture and global multimedia systems used on a number of different purpose call for these developments. The book will be of interest to postgraduate students, professors and practitioners in the areas of artificial intelligence and database systems to modern information environments. The editors hope that readers of this volume can find many inspiring ideas and influential practical examples and use them in their future work.

In today's industrialized societies, the majority of parents work full time while caring for and raising their children and managing household upkeep, trying to keep a precarious balance of fulfilling multiple roles as parent, worker, friend, & child. Increasingly demands of the workplace such as early or late hours, travel, commute, relocation, etc. conflict with the needs of being a parent. At the same time, it is through work that people increasingly define their identity and self-worth, and which provides the opportunity for personal growth, interaction with friends and colleagues, and which provides the income and benefits on which the family subsists. The interface between work and family is an area of increasing research, in terms of understanding stress, job burn out, self-esteem, gender roles, parenting behaviors, and how each facet affects the others. The research in this area has been widely scattered in journals in psychology, family studies, business, sociology, health, and economics, and presented in diverse conferences (e.g., APA, SIOP, Academy of Management). It is difficult for experts in the field to keep up with everything they need to know, with the information dispersed. This Handbook will fill this gap by synthesizing theory, research, policy, and workplace practice/organizational policy issues in one place. The book will be useful as a reference for researchers in the area, as a guide to practitioners and policy makers, and as a resource for teaching in both undergraduate and graduate courses.

Organizational Citizenship Behavior: Its Nature, Antecedents, and Consequences examines the vast amount of work that has been done on organizational citizenship behavior (OCB) in recent years as it has increasingly evoked interest among researchers in organizational psychology. No doubt some of this interest can be attributed to the long-held intuitive sense that job satisfaction matters. Authors Dennis W. Organ, Philip M. Podsakoff, and Scott B. MacKenzie offer conceptual insight as they build upon the various works that have been done on the subject and seek to update the record about OCB.

As scientists toil in the fields of their disciplines, they rarely enjoy opportunities to step back from their work and evaluate where their efforts have taken them. Assessing a field's scientific progress, however, is critical if it is to have any hope of making meaningful advances. The time has come for a systematic self-examination of the state of the field of organizational behavior. Where has it been? Where is it now? And where is it going? The present book poses these questions to raise the self-consciousness of organizational scholars, causing them to question the field's values and its worth as a scientific and practical endeavor. Such a critical self-assessment of the state of organizational behavior is absolutely essential if the field is to prosper and make meaningful advances to behavioral science and to the welfare of individuals and society. This volume is a collection of essays by the field's most highly regarded scholars--experts who have contributed widely to the field, and who were invited to share their thoughts about its past, present, and future. By presenting their ideas about the state of organizational behavior, the discipline as a whole is invited to engage in critical self-reflection. No other book serves this function.

In this book, Alison E Barber delineates three separate stages of recruitment - generating applicants, maintaining applicant status and influencing job choice - and discusses existing knowledge

and important unanswered questions relevant to each of these stages. She also addresses the questions of whether and how recruitment influences organizational outcomes. Traditional recruitment topics such as recruitment source effects and

reactions to initial interviews are covered in detail, while alternative approaches to recruitment research, requiring different theoretical frameworks and different research methods, are also proposed.
