---

*Held at Picatinny Arsenal, October 27-29, 1976*  
Springer Science & Business Media  
This Festschrift documents the Proceedings of the First International Congress on Adhesion Science and Technology, held in honor of Dr. Kash Mittal on the occasion of his 50 birthday, in Amsterdam, The Netherlands, October 16-20, 1995. It contains the full accounts of the plenary and invited lectures, which

are divided into the following seven parts: Part 1: Fundamental aspects of adhesion and general topics; Part 2: Contact angle, wettability and surface energetics; Part 3: Surface modification: Relevance to adhesion; Part 4: Adhesives and adhesive joints; Part 5: Adhesion aspects of polymeric coatings, and polymer-polymer interphase; Part 6: Metal-polymer and metal-ceramic adhesion; and Part 7: General papers. The topics covered include many different aspects of adhesion science and technology, and both fundamental and applied issues are

addressed. The final section of this volume gives a listing of titles, authors and affiliations of the other 185 papers which were included in the technical program of the conference.

### **Moving Forward with 50 Years of Leadership in Advanced Materials**

Elsevier Science & Technology  
This second edition of the successful Handbook of Adhesion provides concise and authoritative articles covering many aspects of the science and technology associated with adhesion and adhesives. It is intended to fill a gap between the

necessarily simplified treatment of the student textbook and the full and thorough treatment of the research monograph and review article. The articles are structured in such a way, with internal cross-referencing and external literature references, that the reader can build up a broader and deeper understanding, as their needs require. This second edition includes many new articles covering developments which have risen in prominence in the intervening years, such as scanning probe techniques, the surface forces apparatus and the relation between adhesion and fractal surfaces. Advances in understanding polymer - polymer interdiffusion are reflected in articles drawing out the implications for adhesive bonding. In addition, articles derived from the earlier edition have been revised and updated where needed. Throughout the book there is a renewed emphasis on environmental implications of the use of adhesives and sealants. The scope of the Handbook, which features nearly 250 articles from over 60 authors, includes the background science - physics, chemistry and material science - and engineering, and also aspects of adhesion relevant to

the use of adhesives, including topics such as: Sealants and mastics Paints and coatings Printing and composite materials Welding and autohesion Engineering design The Handbook of Adhesion is intended for scientists and engineers in both academia and industry, requiring an understanding of the various facets of adhesion.

**Directory and Databook** Elsevier Over the last decade, or so, the growth in the use of adhesives, especially in ever more technically demanding applications, has been rapid and many major developments in the technology of adhesives have been reported. This growth has also led to attention being focused on somewhat more basic studies of the science of adhesion and adhesives, and in recent years our level of fundamental knowledge concerning the formation and mechanical performance of adhesive joints has increased dramatically. Such studies have, of course, been aided greatly by the development of the tools at the disposal of the investigators. For example, specific surface analytical techniques, such as X-ray photoelectron and secondary-ion mass spectroscopy,

and the increasingly sophisticated methods of stress analysis and fracture mechanics have been put to good use in furthering our understanding of the science of adhesion and adhesives. The present book attempts to review the multidisciplinary subject of adhesion and adhesives, considering both the science and technology involved in the formation and mechanical performance of adhesive joints. The author would like to thank his friends and colleagues for useful discussions and help in the preparation of this book. I am particularly grateful to P. Cawley, J. Comyn, W. A. Lees, A. C. Roulin-Moloney, W. C. Wake, J. G. Williams and R. J. Young who have read and commented on various chapters and P. Farr for preparing the diagrams.

Adhesion 6 Springer  
1994 ACCE Conference Proceedings. The latest developments in composite applications and technologies in the transportation industry Introductory and advanced information on polymer composite component design Material and aluminum metal matrix composites. In the past ten years, high volume, high performance applications of advanced

composites in transportation have skyrocketed. Starting with exotic aerospace applications and low volume marine uses, these materials now provide commercial users numerous benefits like performance and durability improvements, weight reduction, part integration and investment and cost advantages. This valuable reference source covers ten years of research in materials, processing, engineering mechanics and design that have produced a growing number of applications in the automotive and commercial transportation, aerospace, defense, marine and recreational industries. Subjects Covered: Vehicle body - adhesive bonding, analysis and test methods, and crash energy absorption Chassis - polymer and metal composite applications Powertrain - emerging materials as well as design and processing case studies Materials Science - new materials, their performance and theoretical treatment Manufacturing Processes - process modeling, fiber performing, and emerging manufacturing methods Infrastructure - applications as well as technical papers Additional - recycling and nondestructive testing.

A Symposium Sponsored by ASTM Committee B-8 on Metallic and Inorganic Coatings, Chicago, IL, 14-15 April 1986  
Society for Advancement of  
The Handbook of Adhesive Technology, Second Edition exceeds the ambition of its bestselling forerunner by reexamining the mechanisms driving adhesion, categories of adhesives, techniques for bond formation and evaluation, and major industrial applications. Integrating modern technological innovations into adhesive preparation and application, this greatly expanded and updated edition comprises a total of 26 different adhesive groupings, including three new classes. The second edition features ten new chapters, a 40-page list of resources on adhesives, and abundant figures, tables, equations.  
**Handbook of Adhesion** John Wiley & Sons  
This volume chronicles the proceedings of the Symposium on Adhesion Aspects of Polymeric Coatings held under the auspices of the Electrochemical Society in Minneapolis, MN, May 10-15, 1981. This event was cosponsored by the Dielectric and Insulation, and Electrothermics and Metallurgy Divisions. Polymeric coatings

are used for a number of purposes, e. g. , decorative, protective, functional (as dielectrics or insulators) and a special application of polymeric (organic) coatings is their use as lithographic materials for making integrated circuit elements. Irrespective of the purpose of the coating, it must adhere well to the underlying substrate. So the need to understand the factors which influence adhesion of organic coatings and the ways to attain desired adhesion is quite manifest. This Symposium was designed to bring together scientists and technologists interested in the adhesion aspects of polymeric coatings, to provide a forum for discussion of latest findings, and to provide an opportunity for cross-pollination of ideas. The technical program contained a total of 46 papers by authors from various corners of the world. The program comprised both invited overviews and contributed original research papers, as this blend is the best way to present the state of knowledge of a topic. The invited speakers were selected so as to represent widely differing disciplines and interests and they hailed from various academic and industrial research laboratories.

Handbook of Composite Reinforcements  
Handbook of Adhesives and Sealants  
Basic Concepts and High Tech Bonding  
 Handbook of Adhesives and Sealants is the most comprehensive Adhesives and Sealants Handbook ever published, with the cooperation of around 35 authors from all over the world – each one a specialist in their field. It will include 80 chapters dealing with general information, theory of bonding and sealing, design of bonding parts, technical characteristics, chemistry, types of adhesives, application, equipment, controls, standards etc. Industrial applications such as automotive, aeronautics, building and civil engineering, electronics, packaging, wood, furniture, metals, plastics and composites, textiles, footwear etc. Over 1,000 real-life examples illustrate the do's and don'ts of using adhesives Every scientific and technical issue concerning every chemical type in every industry Designed to help solve problems quickly, the content is structured to allow readers to navigate this comprehensive resource in 4 different ways  
 Structural Adhesives Society for Advancement of

This comprehensive single volume handbook covers every aspect of reinforcement science, from hands-on subjects, such as manual 'lay-up' processing, to theoretical discussions concerning rheology and modeling. Taken from the recently published six volume International Encyclopedia of Composites, this reference volume offers scholarly and practical knowledge of distinguished industry-experts, academics, and government researchers in one accessible and informative handbook. Fibers, processes, and composite reinforcement types, as well as relevant miscellaneous subjects such as property relationships, manufacturing, hybrid reinforcements, and modeling are given detailed treatment. Engineers, materials scientists, and technologists will find the Composite Reinforcement Handbook an invaluable tool.  
*A Collection of Technical Papers* VSP Part of the "Polymer Science and Technology" series, this text covers such areas as theories of adhesion, adhesive-substrate interface, surface characterization, adhesives types, testing, pretreatment of surfaces, primers,

environment and durability and engineering design.  
12th National SAMPE Technical Conference, Red Lion Inn/Sea TAC, Seattle, Washington, October 7-9, 1980 Springer Science & Business Media  
 Coatings are tested to confirm compliance with specifications, to monitor the operation of a coating process, and to evaluate coatings for various services. The ability of a coating to perform as intended usually depends on several characteristics, and the testing of a coating usually involves several different tests. At first glance the nature of a characteristic that is being tested may seem clear and the results of a test may seem to be unambiguous, however, the nature of a characteristic may be more complex than realized and the ability of a test to measure the characteristic may be less than expected. The members of the ASTM Committee B-8 on Metallic and Inorganic Coatings felt it was desirable to organize a symposium on the testing of the metallic and inorganic coatings so as to bring these problems to the attention of practitioners. This publication is based on the symposium, which was presented in

Chicago on April 14 and 15, 1986.

Twenty-five years is a considerable time  
 span in the life of any scientific discipline;  
 certainly in this twentieth century when  
 development is so rapid. For the science of  
 adhesion and the technology of adhesives  
 this is particularly true. For these, the  
 immediately past quarter century might  
 be compared with the Renaissance when  
 all the civilised world was alight with the  
 'new learning'. Certainly it has been a  
 period of immense advance both of  
 understanding and of application in this  
 an~a of scientific endeavour. It was in the  
 light of this situation that here at City  
 University we set about arranging the  
 Twenty-fifth Annual Conference on  
 Adhesion and Adhesives, of which this

volume presents the proceedings. A total  
 of seventeen papers from seven countries,  
 covering a span of topics from organic  
 chemistry through physical chemistry and  
 physics to engineering. Truly this  
 Conference has 'come of age' and is  
 acknowledged as the annual international  
 venue for the consideration of adhesion in  
 all its diversity. It is our earnest hope and  
 intention that it shall continue for many  
 more years. May I express my personal  
 gratitude to all those who make the event  
 possible; the audiences as well as the  
 speakers, all those in the University who  
 help in various ways, and the publishers  
 who make it possible for you, the wider  
 audience, to have these proceedings.

Surface Preparation Techniques for  
 Adhesive Bonding is an essential guide for  
 materials scientists, mechanical  
 engineers, plastics engineers, scientists  
 and researchers in manufacturing

environments making use of adhesives  
 technology. Wegman and van Twisk  
 provide practical coverage of a topic that  
 receives only cursory treatment in more  
 general books on adhesives, making this  
 book essential reading for adhesion  
 specialists, plastics engineers, and a wide  
 range of engineers and scientists working  
 in sectors where adhesion is an important  
 technology, e.g. automotive / aerospace,  
 medical devices, electronics. Wegman and  
 van Twisk provide a wealth of practical  
 information on the processing of substrate  
 surfaces prior to adhesive bonding. The  
 processing of aluminum and its alloys,  
 titanium and its alloys, steels, copper and  
 its alloys, and magnesium are treated in  
 the form of detailed specifications with  
 comparative data. Other metals not  
 requiring extensive treatment are also  
 covered in detail, as are metal matrix and  
 organic matrix composites, thermosets  
 and thermoplastics. This new edition has  
 been updated with coverage of the latest  
 developments in the field including the  
 sol-gel process for aluminum, titanium,  
 and stainless steel, atmospheric plasma  
 treatment for metals, plastics and rubbers  
 and treatments for bronze and nickel

alloys. Updated to include recent technological developments and chemicals currently prescribed for cleaning and surface preparation; a new generation of adhesives technologists can benefit from this classic guide Enables Materials and Process personnel to select the best process available for their particular application Practical coverage of a topic that receives only cursory coverage in more general books on adhesives: essential reading for adhesion specialists, plastics engineers, and a wide range of engineers and scientists working in sectors where adhesion is an important technology, e.g. automotive / aerospace, medical devices, electronics

 A worldwide directory of commercially available adhesive products for use in a wide range of engineering disciplines. Along with product names and suppliers, basic property data are tabulated and cross-referenced. The book is subdivided according to class of adhesive, with introductions to each class followed by

comparison tables and datasheets for each adhesive. The datasheets contain detailed information, from product codes to environmental properties and are therefore of interest across a broad readership. Standardized data will aid the user in cross-comparison between different manufacturers and in easily identifying the required information.
