The purpose of this document is to provide guidance to national AIDS programmes and partners on the use of indicators to measure and report on the country response. The 2016 United Nations Political Declaration on Ending AIDS, adopted at the United Nations General Assembly High-Level Meeting on AIDS in June 2016, mandated UNAIDS to support countries in reporting on the commitments in the Political Declaration. The Political Declaration on Ending AIDS built on three previous political declarations: the 2001 Declaration of Commitment on HIV/AIDS, the 2006 Political Declaration on HIV/AIDS and the 2011 Political Declaration on HIV and AIDS.

This annual update reports on developments in the global HIV/AIDS epidemic and draws on the most recent data available to give global and regional estimates of its scope and human toll. Despite promising developments in global efforts to address the AIDS epidemic, including increased access to effective treatment and prevention programmes, the number of people living with HIV continues to grow, as does the number of deaths due to AIDS. Findings for 2006 include: the total number of people living with HIV is estimated at 39.5 million, 4.3 million new cases during the year and an estimated 2.9 million deaths. Sub-Saharan Africa continues to bear the brunt of the global epidemic with 63 per cent of all adults and children with HIV globally and with its epicentre in southern Africa. In the past two years, the number of people living with HIV increased in every region in the world, with the most striking increases in East Asia, Eastern Europe and Central Asia, where the number of people living with HIV in 2006 was over 21 per cent higher than in 2004.

How far have we come in the fight against AIDS since the Institute of Medicine released *Confronting AIDS: Directions for Public Health, Health Care, and Research* in 1986? This updated volume examines our progress in implementing the recommendations set forth in the first book. It also highlights new information and events that have given rise to the need for new directions in responding to this disease.

[Update on AIDS in Prisons and Jails](#) Omega Publications (OR) NATIONAL BESTSELLER! The bestselling biography of America's Anchorman by the journalist who knew him best "Chafets has seen more of the pundit's personal world than any other journalist." -The Washington Post People tend to remember the moment they first heard The Rush Limbaugh Show on the radio. For Zev Chafets, it was in a car in Detroit. The braggadocio, the outrageous satire, the slaughtering of liberal sacred cows performed with the verve of a rock and roll DJ-it seemed fresh, funny, and completely subversive. "They're never going to let this guy stay on the air," he thought. Almost two decades later Chafets met Rush and they spent hours together talking on the record about politics, sports, music, show business, religion, and modern American history. Rush opened his home and his world, introducing Chafets to his family, his closest friends, even his psychologist. What has emerged after months of correspondence revealing Rush Limbaugh's thoughts, fears, and ambitions, is a uniquely personal look at the man who was not only the most popular voice on the radio, but also one of the most influential figures in the conservative movement.

"Jonathan Quick offers a compelling and intensely readable plan to prevent worldwide infectious outbreaks. The End of Epidemics is essential reading for those who might be affected by a future pandemic—that is, just about everyone."—Sandeep Jauhar, bestselling author of *Heart: A History* The 2020 outbreak of coronavirus has terrified the world—and revealed how unprepared we are for the next outbreak of an infectious disease. Somewhere in nature, a killer virus is boiling up in the bloodstream of a bird, bat, monkey, or pig, preparing to jump to a human being. This not-yet-detected germ has the potential to wipe out millions of lives over a matter of weeks or months. That risk makes the threat posed by ISIS, a ground war, a massive climate event, or even the dropping of a nuclear bomb on a major city pale in comparison. In *The End of Epidemics*, Duke Global Health Institute faculty member and past Chair of the Global Health Council Dr. Jonathan D. Quick examines the eradication of smallpox and devastating effects of influenza, AIDS, SARS, Ebola, and other viral diseases. Analyzing local and global efforts to contain these diseases and citing firsthand accounts of failure and success, Dr. Quick proposes a new set of actions which he has coined "The Power of Seven," to end epidemics before they can begin. These actions include: - Spending prudently to prevent disease before an epidemic strikes, rather than spending too little, too late - Ensuring prompt, open, and accurate communication between nations and aid agencies, instead of secrecy and territorial disputes - Fighting disease and preventing panic with innovation and good science Practical and urgent, *The End of Epidemics* is crucial reading for citizens, health professionals, and policy makers alike. "Dr. Quick's urgent message makes one hope that this book will reach a huge audience and that its exhortations will be acted on everywhere."—The Wall Street Journal
