Sustainable Marketing is structured around the traditional "4Ps" of marketing and explains how marketing mix decisions can and do influence environmental outcomes. Throughout the book, Donald A. Fuller advocates the conversion of consumption systems to a sustainable paradigm that represents a circular use of resources, not the linear approach (materials [to] products [to] consumption [to] disposal) that leads to the pollution of ecosystems. The book's running theme is that marketers can reinvent strategy and craft "win-win-win" solutions, where customers win (obtaining genuine benefits), organizations win (achieving financial objectives), and ecosystems win (ecosystem functioning is preserved or enhanced). The theme is vividly illustrated by 49 in-text exhibits of successful corporate environmental initiatives.

Drawing upon cost accounting, mathematics, operations research, economics, and the behavioral sciences, Riahi-Belkaoui answers the call for a unique, multifaceted approach to the study of management accounting. His goal: to enhance performance in the essential tasks of cost estimation, allocation, planning, control, and performance evaluation. He covers the traditional techniques, but expands into quantitative methods and

applications, then extends further into the behavioral unification of these techniques. His book is state of the art, ingenious in the way it adapts quantitative methods' solutions to traditional cost accounting topics, and innovative in its use of the behavioral implications. The result is an important resource for professionals, academics, and upper-level students in the field. Riahi-Belkaoui arranges his various techniques chapter by chapter. First, he looks at cost allocation and then at cost-volume profit analysis under stochastic conditions. In Chapter three he treats regression for cost estimation; in Chapter Four, the learning curve for the same purpose. He takes up advanced planning analysis in Chapter Five, advanced control analysis in Chapter Six, and decentralizing and performance evaluation in Chapter Seven. He then finishes with an important discussion of transfer pricing.

The Routledge Companion to Accounting History presents a single-volume synthesis of research in this expanding field, exploring and analysing accounting from ancient civilisations to the modern day. No longer perceived as the narrow study of how a mysterious technique was used in past, the scope of accounting history has widened substantially. This revised and updated volume moves beyond the history of accounting technologies, accounting theories and practices and the accountants who applied them. Expert contributors from around the world explore the interfaces between accounting and the economy, society, culture and the polity. Accounting history is shown to offer important insights into such disparate phenomena as the evolution of capitalism, control of labour, gender and family relationships, racial exploitation, the operation of religious organisations, and the functioning of the state. Illuminating the foundation and development of accounting systems, this updated, classic book opens the field to a new generation of accounting scholars and historians around the world.

Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.
