Jazz hot: No. 1 à 12.
Octobre 1945 MIT Press
Magic is something
unauthorised, an
alternative perhaps, even
a deliberate cultivation of
dark, evil powers. But for
the Anglo-Saxon age, the
neat division between
mainstream and occult,
rational and superstitious,

Christian and pagan is not
always easy to discern. To
maintain its authority, the
church drew a formal line
and outlawed a number of
dubious practices, such as
divination, spells, and folk
healing while at the same
time conducting very
similar rituals itself. It
would seem that there
was a convergence of the
two cultures, native and
Christian and this may
effect the tendency to
view pagan gods as near

omnipotent beings.

" Il était amoureux du
jazz, ne vivait que pour le
jazz, n'entendait, ne
s'exprimait qu'en jazz... "
Ainsi Henri Salvador
évoque-t-il son ami Boris
Vian. Dans ce recueil de
plus de trois cents
chroniques, parues dans
Jazz Hot, Combat, Art, Jazz
News, l'auteur de L'Écume
des jours témoigne de

cette passion née dès l'adolescence, alors qu'il allait applaudir Benny Carter ou Duke Ellington, et qui le conduisit à devenir lui-même trompettiste dans l'orchestre de Claude Abadie, puis au " Tabou ". Il explore au fil de ces écrits tous les univers du jazz, inconditionnel des grands classiques en même temps qu'attentif à l'innovation, pourfendant plagiaires ou suiveurs avec une verve inégalable. Aucune dimension ne lui est étrangère : technique

musicale, coulisses du spectacle et de la production, signification d'une musique qui, après avoir été l'expression majeure des Noirs américains, porte les aspirations et la révolte de la jeunesse française. En même temps qu'une clef essentielle de sa personnalité et de son oeuvre, ce livre demeure une somme irremplaçable pour tous les amateurs de jazz.

A concise and self-contained introduction to causal inference, increasingly important in data science and machine learning. The

mathematization of causality is a relatively recent development, and has become increasingly important in data science and machine learning.

This book offers a self-contained and concise introduction to causal models and how to learn them from data. After explaining the need for causal models and discussing some of the principles underlying causal inference, the book teaches readers how to use causal models: how to compute intervention distributions, how to infer

causal models from observational and interventional data, and how causal ideas could be exploited for classical machine learning problems. All of these topics are discussed first in terms of two variables and then in the more general multivariate case. The bivariate case turns out to be a particularly hard problem for causal learning because there are no conditional independences as used by classical methods for solving multivariate cases. The authors

consider analyzing statistical asymmetries between cause and effect to be highly instructive, and they report on their decade of intensive research into this problem. The book is accessible to readers with a background in machine learning or statistics, and can be used in graduate courses or as a reference for researchers. The text includes code snippets that can be copied and pasted, exercises, and an appendix with a summary of the most important technical concepts.

Aristotle's zoological writings with their wealth of detailed investigations on diverse species of animals have fascinated medieval and Renaissance culture. This volume explores how these texts have been read in various traditions (Arabic, Hebrew, Latin), and how they have been incorporated in different genres (in philosophical and scientific treatises, in florilegia and encyclopedias, in theological symbolism, in

moral allegories, and in manuscript illustrations). This multidisciplinary and multilinguistic approach highlights substantial aspects of Aristotle's animals.
