Architecture/Environment How to design buildings that heat with the sun, cool with the wind, light with the sky, and move into the future using on-site renewable resources Developed for rapid use during schematic design, this book clarifies relationships between form and energy and gives designers tools for designing sustainably. It also: * Applies the latest passive energy and lighting design research * Organizes information by architectural elements at three scales: * building groups, individual buildings, and building parts * Brings design strategies to life with examples and practical design tools * Features: * 109 analysis techniques and design strategies * More than 750 illustrations, sizing graphs, and tables * Both inch-pound and metric units

Occupational Safety and Hygiene presents selected papers from the International Symposium on Occupational Safety and Hygiene - SHO2013 (Guimarães, Portugal, 14-15 February 2013), which was organized by the Portuguese Society for Occupational Safety and Hygiene (SPOSHO). The contributions from 15 different countries focus on: - Occupational safety - Risk assessment - Safety management - Ergonomics - Management systems - Environmental ergonomics - Physical environments - Construction safety - Human factors The papers included in the book are

mainly based on research carried out at universities and other research institutions, but they are also based on practical studies developed by Occupational Health & Safety (OHS) practitioners within their companies. As a result, this book will be useful to get acquainted with the state-of-the-art of the research within the aforementioned domains, as well as with some practical tools and approaches that are currently used by OHS professionals worldwide.

Whether in a small backyard or a larger farm or forest, trees are vital to the web of life. Protecting and planting trees can restore wildlife habitat, heal degraded land, conserve soil, protect watersheds, diversify farm or garden products, beautify landscapes, and enhance the economic and ecological viability of land use systems. Careful planning and sound information is needed to reach these goals. The Overstory Book distills essential information about working with trees into 134 short, easy-to-read, single-subject chapters. Each chapter shares key concepts and useful information, so readers can get back to planting and protecting more trees, gardens, and forests, more effectively. * Discover time-tested agricultural and conservation techniques from indigenous and traditional peoples * Work with beneficial microorganisms, from mycorrhizal fungi to nitrogen-fixing bacteria and more * Create abundance with fruit trees, timber trees, vine crops, vegetables, mushrooms, and more * Form alliances with animals, from wildlife, birds, and insects to integrated, free-range livestock * Design effective tree-based windbreaks, noise barriers, live fences, and erosion buffers * Understand how to grow or obtain the highest quality seeds, seedlings, and plant materials * Restore fertility, productivity, and biodiversity with trees * Work with multipurpose plants including trees, palms, bamboos, and more * Market products effectively to improve economic returns sustainably * Locate helpful internet sites, organizations, people, and publications * And much more!

Esta obra aborda o Estatuto da Cidade como lei federal para políticas urbanas e a importância da inspeção predial e da acessibilidade nas edificações. Apresenta o Código de Ética

Profissional do Sistema Confea/Crea, além das regras para empresas construtoras como mecanismo de relacionamento duradouro com o mercado da construção civil. Mostra a relevância da conduta ética nos contratos, que são balizados pelos Códigos Civil e de Defesa do Consumidor. Discute as leis de uso e ocupação do solo, o licenciamento e a aprovação de projetos de edificações, bem como as normas regulamentadoras e de segurança do trabalho da ABNT. Por fim, explica a legislação ambiental e a importância social e comercial da certificação para edificações sustentáveis. O conteúdo pode ser aplicado para os cursos técnicos em Arquitetura, Desenho de Construção Civil, Design de Interiores, Edificações, entre outros. Possui material de apoio ao professor em www.editorasaraiva.com.br para download. NFPA 14, Standard for the Installation of Standpipe and Hose Systems, 2019 Edition Building Research Establishment

Os sistemas de combate a incêndio são equipamentos normatizados e especializados que agem na extinção do fogo nas situações de emergências. Visando a proteção dos usuários de uma universidade, este trabalho tem como objetivo avaliar o sistema de combate a incêndio em uma Instituição Pública de Ensino Superior, verificando se a mesma está em conformidade com o Código de Segurança Contra Incêndio e Pânico do Estado do Rio Grande do Norte. Na metodologia foram realizadas cinco vistorias em três prédios: um de salas de aulas, um de salas de professores e o outro de laboratórios educacionais. A análise dos dados obtidos comprovou que o sistema de combate a incêndio da instituição não está conforme as normas solicitadas pelo Corpo de Bombeiros do Estado e que é necessário à correção dos projetos de combate a incêndio utilizados na universidade.

Review of previous edition: "Trevor Kletz's book makes an invaluable contribution to the systematic, professional and scientific approach to accident investigation". The Chemical Engineer Fully revised and updated, the third edition of Learning from Accidents provides more information on accident investigation, including coverage of accidents involving liquefied gases, building collapse and other incidents that have occurred because faults were invisible (e.g. underground pipelines). By analysing accidents that have occurred Trevor Kletz shows how

we can learn and thus be better able to prevent accidents happening again. Looking at a wide range of incidents, covering the process industries, nuclear industry and transportation, he analyses each accident in a practical and non-theoretical fashion and summarises each with a chain of events showing the prevention and mitigation which could have occurred at every stage. At all times *Learning from Accidents*, 3rd Edition emphasises cause and prevention rather than human interest or cleaning up the mess. Anyone involved in accident investigation and reporting of whatever sort and all those who work in industry, whether in design, operations or loss prevention will find this book full of invaluable guidance and advice.

With the advent of computers, very large datasets have become routine. Standard statistical methods don't have the power or flexibility to analyse these efficiently, and extract the required knowledge. An alternative approach is to summarize a large dataset in such a way that the resulting summary dataset is of a manageable size and yet retains as much of the knowledge in the original dataset as possible. One consequence of this is that the data may no longer be formatted as single values, but be represented by lists, intervals, distributions, etc. The summarized data have their own internal structure, which must be taken into account in any analysis. This text presents a unified account of symbolic data, how they arise, and how they are structured. The reader is introduced to symbolic analytic methods described in the consistent statistical framework required to carry out such a

summary and subsequent analysis. Presents a detailed overview of the methods and applications of symbolic data analysis. Includes numerous real examples, taken from a variety of application areas, ranging from health and social sciences, to economics and computing. Features exercises at the end of each chapter, enabling the reader to develop their understanding of the theory. Provides a supplementary website featuring links to download the SODAS software developed exclusively for symbolic data analysis, data sets, and further material. Primarily aimed at statisticians and data analysts, *Symbolic Data Analysis* is also ideal for scientists working on problems involving large volumes of data from a range of disciplines, including computer science, health and the social sciences. There is also much of use to graduate students of statistical data analysis courses.

ABC of Resuscitation CRC Press

As instalações hidráulicas e sanitárias, em geral, lideram a ocorrência de patologia nos edifícios, e a maior parte das manifestações patológicas é ocasionada por falhas de projeto. O projeto hidráulico-sanitário é indispensável em uma obra, pois evita inúmeros erros na montagem das instalações, falhas de concepção sistêmica, falhas de compatibilização com os projetos arquitetônico e estrutural e erros de dimensionamento. Além de um bom projeto, é necessário o emprego de materiais de qualidade comprovada, pois os reparos nos sistemas prediais sempre apresentam custos elevados. Pelo fato de as instalações do edifício ficarem embutidas (ocultas), pouca importância é dada ao seu projeto, sendo muito comum a execução de obras ricas em improvisações na busca de maior economia, práticas que, somadas à baixa qualificação da mão de obra, acabam por comprometer a qualidade final da obra. Em trinta anos de atuação como projetista de instalações hidráulico-sanitárias, o engenheiro e professor Roberto de Carvalho Júnior constatou vários problemas relacionados à elaboração, à leitura e à compreensão do projeto hidráulico-sanitário por parte dos projetistas e de outros profissionais que atuam na construção civil. Embora no mercado existam bons livros sobre o tema, o autor observou a carência e a importância de uma bibliografia que atendesse de forma mais didática, prática e simplificada às necessidades de aprendizado dos principais conceitos necessários para a elaboração de projetos de instalações prediais hidráulico-sanitárias (instalações de água fria e quente, esgoto e águas

pluviais). Esta edição foi elaborada usando a bibliografia tradicional e a experiência conquistada pelo autor como projetista de instalações hidráulicas e sanitárias e como professor da disciplina de Instalações Prediais em cursos de graduação em Engenharia Civil e Arquitetura e Urbanismo.

Durante trinta anos atuando como projetista de instalações, o

engenheiro Roberto de Carvalho Júnior constatou vários problemas de compatibilização entre os projetos arquitetônicos e os de instalações prediais hidráulico-sanitárias e elétricas. Como professor de disciplinas de instalações prediais em faculdades de Engenharia Civil e Arquitetura e Urbanismo, o autor observou a carência e a importância de uma bibliografia que atendesse às necessidades de aprendizado e consulta sobre as interfaces físicas e funcionais do projeto arquitetônico com as instalações hidráulicas prediais. Na parte 1 deste livro, são apresentados os principais conceitos de instalações prediais de água fria e quente, segurança contra incêndios, esgoto e águas pluviais. Na parte 2, são abordados: as principais interfaces, as novas tecnologias e os conceitos dessas instalações com enfoque no projeto arquitetônico. O livro foi desenvolvido com a finalidade de apresentar a arquitetos, engenheiros civis e alunos dos cursos de Arquitetura e Urbanismo e Engenharia Civil uma visão conceitual mais didática, prática e simplificada cada dos vários subsistemas das instalações hidráulicas prediais, bem como de mostrar a necessidade da integração dessas instalações com os demais subsistemas construtivos envolvidos na construção do edifício.

A Coleção de Segurança e Saúde no Trabalho foi elaborada com base nas diretrizes curriculares do Ministério da Educação. O processo de trabalho, de modo geral, requer do trabalhador competências técnicas muito bem desenvolvidas e habilidades

que lhe permitam um exercício com excelência. Neste sentido, esta coleção espera contribuir com estudantes, professores e pesquisadores, no que diz respeito à Segurança do Trabalho no Brasil, sem, no entanto, esgotar o assunto. Os três volumes da coleção abordam temas como: princípios da administração e gestão empresarial, conceitos básicos, ergonomia, ética, empreendedorismo, psicologia, relação com a comunidade, legislação, sistema de gestão, redação técnica, tecnologia da informação, técnicas de treinamentos e comunicação, meio ambiente, gerenciamento de riscos, prevenção e combate a incêndios, estatística, desenho técnico, primeiros socorros, higiene ocupacional entre outros.
