Why It's a Holiday Heinemann Educational Books

Every day, ceramic artists encounter techniques, processes, materials, problems, and more that leave them with questions such as: How? Why? Where? Clay: A Studio Handbook answers those questions with authoritative, comprehensive coverage of topics ranging from studio safety, finding, making, and improvising tools and equipment, firing processes and theory, and much more. Drawing on more than 30 years of experience in ceramics, Pitelka has created the most practical, all-inclusive studio handbook for students, studio artists, educators, and all those interested in the art of clay. Ten chapters, addressing the full range of ceramic processes, bring a lifetime of ceramic knowledge directly into the hands of potters. Written with concern for safe and efficient studio operation, diligent attention is paid to safety practices. A thorough table of contents, glossary, and index make finding answers quick and convenient. Numerous step-by-step illustrations guide readers through the many techniques.

The Internet makes available an unparalleled, and seemingly unlimited, repository of resources and ideas for social studies teachers. This book provides guidance and explores how the Internet can become an essential element in a teacher's repertoire of tools for engaging students in social studies curriculum. Chapters in the book are: (1) "Effective Internet Searching" (Barbara Brehm); (2) "The Webmaster's Tale" (Tim Dugan); (3) "The Classroom Website" (Timothy A. Keiper and Linda Bennett); (4) "Teaching History" (C. Frederick Risinger); (5) "The Virtual Tour" (Eileen Giuffre Cotton); (6) "Teaching Geography" (Cheryl L. Mason and Marsha Alibrandi); (7) "Creating Teledemocracy" (Bruce Larson and Timothy A. Keiper); (8) "Civic Education" (Bruce Larson and Angie Harwood); (9) "Economics Education" (Lawrence A. Weiser and Mark C. Schug); (10) "Global Education" (Bob Coulson and Alma Vallisneri); (11) "Global Issues" (Gregory A. Levitt); (12) "Art-Based Resources" (David B.

Williams); (13) "Multiculturalism and the Internet" (Deborah A. Byrnes and Grace Huerta); (14) "Teacher Education" (D. Mark Myers); (15) "Problem-Based Learning" (Anthony W. Lorsbach and Fred Basolo, Jr.); (16) "Citizenship Projects" (John W. Saye and John D. Hoge); (17) "Civic-Moral Development" (Joseph A. Braun, Jr.); (18) "Safe Web Exploration" (Michael Berson and Eileen Berson); and (19) "Assessment" (Pat Nickell). (Each chapter contains references.) (BT)

This new edition of Soil Erosion Research Methods retains the themes and layout of the first edition. However, most chapters have been revised and some additional chapters have been added. There are new chapters on modeling wind and water erosion. Extensive revisions and updating have been done in chapters dealing with assessment of erosivity and erodibility, erosion, crop productivity, measuring sediment yield from river basins and field plot techniques. There is extensive updating of current statistics on the global magnitude of soil erosion by water and wind and on denudation rates. Several new authors have made significant improvements in revising and updating available information.

The Endangered Species Act McDougal Littell/Houghton Mifflin Landscapes are characterized by a wide variation, both spatially and temporally, of tolerance and response to natural processes and anthropogenic stress. These tolerances and responses can be analyzed through individual landscape parameters, such as soils, vegetation, water, etc., or holistically through ecosystem or

watershed studies. However, such approaches are both time consuming and costly. Soil erosion and landscape evolution modeling provide a simulation environment in which both the short- and long-term consequences of land-use activities and alternative land use strategies can be compared and evaluated. Such models provide the foundation for the development of land management decision support systems. Landscape Erosion and Evolution Modeling is a state-of-the-art, interdisciplinary volume addressing the broad theme of soil erosion and landscape evolution modeling from different philosophical and technical approaches, ranging from those developed from considerations of first-principle soil/water physics and mechanics to those developed empirically according to sets of behavioral or empirical rules deriving from field observations and measurements. The validation and calibration of models through field studies is also included. This volume will be essential reading for researchers in earth, environmental and ecosystem sciences, hydrology, civil engineering, forestry, soil science, agriculture and climate change studies. In addition, it will have direct relevance to the public and private land management communities.

As with all ecosystems, river systems involve a complex interaction of a rich diversity of micro-organisms, plants and animals with their physical and chemical environment. The river habitat presents unique problems for organisms exposed to unidirectional currents, seasonal variation in flow, and disturbance due to pollution and other human interference. The book starts with a description of the taxa, their adaptations and their ecologies, followed by chapters describing the ecosystem processes in terms of trophic interactions and the key production processes related to photosynthesis and decomposition. A major chapter then considers the principles, practices and problems associated with making reliable observations on river organisms, leading to final chapters investigating how river biota are impacted by human activity and how, in turn, they can be used as indicators of these effects in river-management programmes.

The Code of Hammurabi is a well-preserved Babylonian law code of ancient Mesopotamia, dating back to about 1754 BC. It is one of the oldest deciphered writings of significant length in the world. The sixth Babylonian king, Hammurabi, enacted the code, and partial copies exist on a man-sized stone stele and various clay tablets. The Code consists of 282 laws, with scaled punishments, adjusting "an eye for an eye, a tooth for a tooth" (lex talionis) as graded depending on social status, of slave versus free man. Nearly one-half of the Code deals with matters of contract, establishing, for example, the wages to be paid to an ox driver or a surgeon. Other provisions set the terms of a transaction, establishing the liability of a builder for a house that collapses, for example, or property that is damaged while left in the care of another. A third of the code addresses issues concerning household and family relationships such as inheritance, divorce, paternity, and sexual behavior. Only one provision appears to

impose obligations on an official; this provision establishes that a judge who reaches an incorrect decision is to be fined and removed from the bench permanently. A few provisions address issues related to military service. Hammurabi ruled for nearly 42 years, c. 1792 to 1750 BC according to the Middle chronology. In the preface to the law, he states, "Anu and Bel called by name me, Hammurabi, the exalted prince, who feared Marduk, the patron god of Babylon (The Human Record, Andrea & Overfield 2005), to bring about the rule in the land." On the stone slab there are 44 columns and 28 paragraphs that contained 282 laws. The laws follow along the rules of 'an eye for an eye'.

This collection of essays displays the range and breadth of Hitchcock scholarship and assesses the significance of his body of work as a bridge between the fin de siècle culture of the 19th century and the 20th century. It engages with Hitchcock's characteristic formal and aesthetic preoccupations.

Mitochondria, often referred to as the "powerhouses" of the cell, generate adenosine triphosphate (ATP) by oxidative phosphorylation or OXPHOS, and maintain cellular homeostasis. In addition to generating ATP, mitochondria are involved in regulation of cell cycle, proliferation, free radical production, innate immune responses and apoptosis. *Mitochondrial Function in Lung Health and Disease* fills the current gap in the literature and outlines the growing clinical relevance of mitochondrial dysfunction. Currently, there is no overview on the role of mitochondria in pulmonary diseases and this volume focuses on the mitochondrial metabolism, redox signaling, and mechanisms of mitochondrial pathways in lung injury, inflammation, repair and remodeling. Furthermore, in addition to their well-recognized role in cellular energy production and apoptosis, mitochondria appear to play a role in many respiratory diseases and lung cancer. Chapters are written by top notch researchers and clinicians and

outline the evidence for mitochondrial biogenesis in inhalational lung injury, COPD and asthma.

Charles Darwin and the Theory of Evolution Routledge

In the ongoing courageous struggle of a relatively small group of Chinese to prevent the completion of the Three Gorges Dam in China, Dai Qing is the outspoken leader whose eloquent voice is always heard despite threats and intimidation by the Chinese authorities to silence it. Dai Qing, an investigative journalist and author with a wide audience in China and abroad, compiled this book of essays and field reports assessing the impact of the Three Gorges megadam now under construction at Sandouping in China's Hubei province at great risk to her own freedom. This book is an effort to prevent history from repeating itself ten-fold (a reference to the great floods in 1975 during which over 60 dams collapsed and at least 100,000 people lost their lives) if the 39 billion cubic metres of water in the Three Gorges reservoir ever escapes by natural or man-made catastrophes. These comprehensive essays reveal the deep rooted problems presented by the Three Gorges project that the government is attempting to disguise or suppress. The main concerns are population resettlement and human rights, the irreversible environmental and economic impact, the loss of cultural antiquities and historical sites, military considerations, and hidden dam disasters from the past. Opponents of the dam are attempting to kill the project or at least reduce the size of the megadam now planned to be the biggest, most expensive and, incidentally, the most hazardous of all hydro-electric projects on this planet.
