Blow moulding
is a

manufacturing
process used
to form hollow
plastic parts.

It evolved
from the
ancient art of
glass blowing
and it is used
to particular
advantage
with plastic
materials.

Celluloid was
used first to
blow mould
baby rattles
and novelties
in the 1930s,

linear low-
density
polyethylene
was used in
the 1940s for
high
production
bottles and
these days
polyethylene
terephthalate
is used to
make
anything from
soda bottles,
to highly
sophisticated
multilayered
containers
and
automotive
fuel tanks in
the last
decade. When
designing a
product it is
important to
consider

aspects such
as a material's
characteristics
, the
processing
methods
available, the
assembly and
finishing
procedures,
and the life
cycle and
expected
performance
of the product.
This book
presents the
basics of blow
moulding as
well as the
latest state-of-
the-art and
science of the
industry. A
key feature is
the approach
of discussing
the 'basics'

and then taking the reader through the entire process from design development through to final production.
