Proven strategy for reducing production and operating costs while increasing profits As the growth of the Internet shifts power to consumers, the pressure on companies to keep prices low will continue to mount. Increasingly corporations are relying on "margin management" and supply chain management as a means of keeping prices low while raising profits.

Activity-based costing and management (ABC/M) data is key to succeeding in both these critical management strategies. This book explains how executives can effectively use the information furnished by cutting-edge ABC/M systems. The author, an acknowledged expert in the field, clearly defines the ABC/M system and explains how to use the information it provides for best results. He provides a rational framework for understanding the fifteen key defining characteristics of ABC/M and arms readers with an ABC/M Readiness Assessment test along with extremely user-friendly exhibits.

Handbook of Cost Management CRC Press

The book offers important guidelines in analyzing the technical, economic, financial, administrative and organizational, environmental, commercial, and institutional aspects of development projects. It also suggests a format for organizing these aspects into one comprehensive design as it emphasizes the need for analyzing investments in their entirety as opposed to analyzing them in separate segments.

Managers and technicians from national and local governments, business corporations, parastatals or public enterprises, non-governmental organizations, development and commercial banks, and national and international aid funding institutions who are directly or indirectly involved in planning and implementing development activities will find this book useful. Teachers and students in project management, finance, banking, economic analysis, and development management will also find valuable learning gains from the book. The concepts and procedure in designing and analyzing development projects are illustrated using hypothetical case studies. The discussions and illustrations will serve as important guidelines in the implementation of development projects.

(PMBOK, PMI, PMP and Project Management Professional are registered marks of the Project Management Institute, Inc.) A Systems Approach to Planning, Scheduling, and Controlling Createspace Independent Publishing Platform Proper cost accounting and financial management are essential elements of any successful construction job, and therefore make up essential skills for construction project managers and project engineers. Many textbooks on the market focus on the theoretical principles of accounting and finance required for head office staff like the chief financial officer (CFO) of a construction

firm. This book's unique practical approach focuses on the activities of the construction management team, including the project manager, superintendent, project engineer, and jobsite cost engineers and cost accountants. In short, this book provides a seamless connection between cost accounting and construction project management from the construction management practitioner's perspective. Following a complete accounting cycle, from the original estimate through cost controls to financial close-out, the book makes use of one commercial construction project case study throughout. It covers key topics like financial statements, ratios, cost control, earned value, equipment depreciation, cash flow, and pay requests. But unlike other texts, this book also covers additional financial responsibilities such as cost estimates, change orders, and project close-out. Also included are more advanced accounting and financial topics such as supply chain management, activity-based accounting, lean construction techniques, taxes, and the developer's pro forma.

Each chapter contains review questions and applied exercises and the book is supplemented with an eResource with instructor manual, estimates and schedules, further cases and figures from the book. This textbook is ideal for use in all cost accounting and financial management classes on both undergraduate and graduate level construction management or construction engineering programs.
