'*Tap Dancing All The Way To Omaha Beach*' Turner Publishing Company vividly portrays his Mexican and Indian relatives and his confusing, often painful, childhood interactions with the dominant white society. He left childhood behind when he was sent to Vietnam. There he found hatred, terror, and camaraderie in equal measure. On returning from Vietnam, Mendoza faced professional, economic, and personal struggles but found consolation in love, family, and friendship. His moving account of his first wife's courageous, losing battle with.

*Education for Victory* U of Nebraska Press  
 At the conclusion of World War II, Americans anxiously contemplated the return to peace. It was an uncertain time, filled with concerns about demobilization, inflation, strikes, and the return of a second Great Depression. Balanced against these challenges was the hope in a future of unparalleled opportunities for a generation raised in hard times and war. One of the remarkable untold stories of postwar America is the successful assimilation of sixteen million veterans back into civilian society after 1945. The G.I. generation returned home filled with the same sense of fear and hope as most citizens at the time. Their transition from conflict to normalcy is one of the greatest chapters in American history. "The

Greatest Generation Comes Home" combines military and social history into a comprehensive narrative of the veteran's experience after World War II. It integrates early impressions of home in 1945 with later stories of medical recovery, education, work, politics, and entertainment, as well as moving accounts of the dislocation, alienation, and discomfort many faced. The book includes the experiences of not only the millions of veterans drawn from mainstream white America, but also the women, African Americans, Latinos, and Asian Americans who served the nation. Perhaps most important, the book also examines the legacy bequeathed by these veterans to later generations who served in uniform on new battlefields around the world.

Four months before the attack on Pearl Harbor on December 7, 1941, Mildred McClellan Melville, a member of the Denver Woman's Press Club, predicted that war would come for the United States and that its long arm would reach into the lives of all Americans. And reach it did. Colorado women from every corner of the state enlisted in the military, joined the workforce, and volunteered on the home front. As military women, they served as nurses and in hundreds of noncombat positions. In defense plants they riveted steel, made bullets, inspected bombs, operated cranes, and stored projectiles. They hosted USO canteens, nursed in civilian hospitals, donated blood, drove Red Cross vehicles, and led scrap drives; and they processed hundreds of thousands of forms and reports. Whether or not they worked outside the home, they wholeheartedly participated in a kaleidoscope of activities to support the war effort. In *Colorado Women in World War II* Gail M. Beaton interweaves nearly eighty oral histories—including interviews, historical studies, newspaper accounts, and organizational records—and historical photographs (many from the interviewees themselves) to shed light on women's participation in the war, exploring the dangers and triumphs they felt, the nature of their work, and the lasting ways in which the war influenced their lives. Beaton offers a new perspective on World War II—views from field hospitals, small steel companies, ammunition plants, college classrooms, and sugar beet fields—giving a rare look at how the war profoundly transformed the women of this state and will be a compelling new resource for readers, scholars, and students interested in Colorado history and women's roles in World War II. *United States Submarine Veterans, Inc* Lulu.com

The "remarkable" New York Times bestseller about the battle in the Pacific that turned the tide of World War II—from the author of *The Miracle of Dunkirk* (Los Angeles Times). On the morning of June 4, 1942, doom sailed on Midway. Hoping to put itself within striking distance of Hawaii and California, the Japanese navy planned an ambush that would obliterate the remnants of the American Pacific fleet. On paper, the Americans had no chance of winning. They had fewer ships, slower fighters, and almost no battle experience. But because their codebreakers knew what was coming, the American navy was able to prepare an ambush of its own. Over two days of savage battle, American sailors and pilots broke the spine of the Japanese war machine. The United States prevailed against momentous odds; never again did Japan advance. In stunning detail, Walter Lord, the #1 New York Times bestselling author of *Day of Infamy* and *A Night to Remember*, tells the story of one of the greatest upsets in naval history. "Graphic and realistic . . . not an impersonalized account of moves on the chessboard of war, [but] a story of individual people facing crucial problems." —The New York Times

The Greatest Generation Comes Home DIANE Publishing

THE KENEMAN CHRONICLES This is a unique form of career History; it consists of over 100 short stories covering a 22-year period of a U. S. Naval career, which began 72 years ago in 1937. In those days the entry pay of an Apprentice Seaman was \$21.00 a month or and average of about six cents an hour. The story's, in most cases, but not all, are basically inserted in the their order of occurrence. However, when the subject matter changes to individuals, ships aircraft battles, etc. The story's book location may have been controlled mostly by its subject matter. The fact remains that each story, regardless of time, is complete unto itself. Further, many of the stories herein include the author's analysis and personal opinion

of the event or individual being described. This was done for the purpose of making the story more complete or interesting. Please understand in almost every case each story is as true as possible based on personal experiences, observations, people I have known or met that have provided additional information to assist in completing the effort. The author at the tender age of 90 years, is still enjoying a retired life. He has made his computer a friend that will preserve his thoughts and opinions for long after he has reported to his last duty station!

The story of the 13 courageous black men who integrated the officer corps of the US Navy during World War II—leading desegregation efforts across America and anticipating the civil rights movement Through oral histories and original interviews with surviving family members, Dan Goldberg brings 13 forgotten heroes away from the margins of history and into the spotlight. He reveals the opposition these men faced: the racist pseudo-science, the regular condescension, the repeated epithets, the verbal abuse and even violence. Despite these immense challenges, the Golden Thirteen persisted—understanding the power of integration, the opportunities for black Americans if they succeeded, and the consequences if they failed. Until 1942, black men in the Navy could hold jobs only as cleaners and cooks. The Navy reluctantly decided to select the first black men to undergo officer training in 1944, after enormous pressure from ordinary citizens and civil rights leaders. These men, segregated and sworn to secrecy, worked harder than they ever had in their lives and ultimately passed their exams with the highest average of any class in Navy history. In March 1944, these sailors became officers, the first black men to wear the gold stripes. Yet even then, their fight wasn't over: white men refused to salute them, refused to eat at their table, and refused to accept that black men could be superior to them in rank. Still, the Golden Thirteen persevered, determined to hold their heads high and set an example that would inspire generations to come. In the vein of *Hidden Figures*, *The Golden Thirteen* reveals the contributions of heroes who were previously lost to history.

DIANE Publishing

Warship Builders is the first scholarly study of the U.S. naval shipbuilding industry from the early 1920s to the end of World War II, when American shipyards produced the world's largest fleet that helped defeat the Axis powers in all

corners of the globe. A colossal endeavor that absorbed billions and employed virtual armies of skilled workers, naval construction mobilized the nation's leading industrial enterprises in the shipbuilding, engineering, and steel industries to deliver warships whose technical complexity dwarfed that of any other weapons platform. Based on systematic comparisons with British, Japanese, and German naval construction, Thomas Heinrich pinpoints the distinct features of American shipbuilding methods, technology development, and management practices that enabled U.S. yards to vastly outproduce their foreign counterparts. Throughout the book, comparative analyses reveal differences and similarities in American, British, Japanese, and German naval construction. Heinrich shows that U.S. and German shipyards introduced electric arc welding and prefabrication methods to a far greater extent than their British and Japanese counterparts between the wars, laying the groundwork for their impressive production records in World War II. While the American and Japanese navies relied heavily on government-owned navy yards, the British and German navies had most of their combatants built in corporately-owned yards, contradicting the widespread notion that only U.S. industrial

mobilization depended on private enterprise. Lastly, the U.S. government's investments into shipbuilding facilities in both private and government-owned shipyards dwarfed the sums British, Japanese, and German counterparts expended. This enabled American builders to deliver a vast fleet that played a pivotal role in global naval combat.

How does a chemical engineer, discharged from the Navy, drafted into the Army and assigned to the Medics, get on the Manhattan Atom Bomb Project and become a Nuclear Engineer in the Twentieth Century? With a great deal of luck and a little talent. In addition to telling this story, the book is written for a lay audience, but for someone having technical and scientific interests, and wanting to better understand the development of nuclear technology in the US. Radiation safety, power economics, risk/benefit analyses, and the societal issues of nuclear waste disposal, including such politically non-touchable areas as -

"How many dollars to save a life?" and relatedly - "How safe is safe enough?" - are all discussed. Mr. Kupp's anecdotes of his youth, his home life, and his 30-year sailing history, all contribute to the realism of the book and round out the story of his life to more than just a technical career.
