Cassia Spohn and Katharine Tellis assess the criminal justice system's response to sexual assault, exploring the complex dynamics that shape the actions of police

and prosecutors. The authors draw on unparalleled access to Los Angeles detectives, prosecutors, and case files to make sense of the factors that affect the outcomes of sexual assault claims. Following cases from victim report, to police investigation, to the decision to charge or not to charge, they provide new insights into why shockingly few sexual assault claims lead to an eventual criminal conviction.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be

preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The Conflict Over Kosovo Routledge

In discussing a management topic, scholars, educators, practitioners, and the media often toss out the name of a theorist (Taylor, Simon, Weber) or make a sideways reference to a particular theory (bureaucracy, total quality management, groupthink) and move on, as if assuming their audience possesses the necessary background to appreciate and integrate the reference. This is often far from the case. Individuals are frequently forced to seek out a hodgepodge of sources varying in quality and presentation to provide an overview of a particular idea. This work is designed to serve as a core reference for anyone interested in the essentials of contemporary management theory.

Drawing together a team of international

scholars, it examines the global landscape of the key theories and the theorists behind them, presenting them in the context needed to understand their strengths and weaknesses to thoughtfully apply them. In addition to interpretations of long-established theories, it also offers essays on cutting-edge research as one might find in a handbook. And, like an unabridged dictionary, it provides concise, to-the-point definitions of key concepts, ideas, schools, and figures. Features and Benefits: Two volumes containing over 280 signed entries provide users with the most authoritative and thorough reference resources available on management theory, both in terms of breadth and depth of coverage. Standardized presentation format, organized into categories based on validity and importance, structures entries so that readers can assess the fundamentals, evolution, and impact of theories. To ease navigation between and among related entries, a Reader's Guide groups entries thematically and each entry is followed by Cross-References. In the electronic version, the Reader's Guide combines with the Cross-References and a detailed Index to provide robust search-

and-browse capabilities. An appendix with a Chronology of Management Theory allows readers to easily chart directions and trends in thought and theory from early times to the present. An appendix with Central Management Insights allows readers to easily understand, compare, and apply major theoretical messages of the field. Suggestions for Further Reading at the end of each entry guide readers to sources for more detailed research and discussion. Key themes include: Nature of Management Managing People, Personality, and Perception Managing Motivation Managing Interactions Managing Groups Managing Organizations Managing Environments Strategic Management Human Resources Management International Management and Diversity Managerial Decision Making, Ethics, and Creativity Management Education, Research, and Consulting Management of Operations, Quality, and Information Systems Management of Entrepreneurship Management of Learning and Change Management of Technology and Innovation Management and Leadership Management and Social / Environmental Issues PLUS: Appendix of

Chronology of Management Theory PLUS: Appendix of Central Management Insights The Vocational Education Act of 1963 MDPI

Fractals are characterized by the repetition of similar patterns at ever-diminishing scales. Fractal geometry has emerged as one of the most exciting frontiers on the border between mathematics and information technology and can be seen in many of the swirling patterns produced by computer graphics. It has become a new tool for modeling in biology, geology, and other natural sciences. Anthropologists have observed that the patterns produced in different cultures can be characterized by specific design themes. In Europe and America, we often see cities laid out in a grid pattern of straight streets and right-angle corners. In contrast, traditional African settlements tend to use fractal structures-circles of circles of circular dwellings, rectangular walls enclosing ever-smaller rectangles, and streets in which broad avenues branch down to tiny footpaths with striking geometric repetition. These indigenous fractals are not limited to architecture; their recursive patterns echo throughout many disparate African designs and

knowledge systems. Drawing on interviews with African designers, artists, and scientists, Ron Eglash investigates fractals in African architecture, traditional hairstyling, textiles, sculpture, painting, carving, metalwork, religion, games, practical craft, quantitative techniques, and symbolic systems. He also examines the political and social implications of the existence of African fractal geometry. His book makes a unique contribution to the study of mathematics, African culture, anthropology, and computer simulations. *Rice Production Worldwide* Tata McGraw-Hill Education

Buildings are one of the main causes of the emission of greenhouse gases in the world. Europe alone is responsible for more than 30% of emissions, or about 900 million tons of CO₂ per year. Heating and air conditioning are the main cause of greenhouse gas emissions in buildings. Most buildings currently in use were built with poor energy efficiency criteria or, depending on the country and the date of construction, none at all. Therefore, regardless of whether construction regulations are becoming stricter, the real challenge nowadays is the energy

rehabilitation of existing buildings. It is currently a priority to reduce (or, ideally, eliminate) the waste of energy in buildings and, at the same time, supply the necessary energy through renewable sources. The first can be achieved by improving the architectural design, construction methods, and materials used, as well as the efficiency of the facilities and systems; the second can be achieved through the integration of renewable energy (wind, solar, geothermal, etc.) in buildings. In any case, regardless of whether the energy used is renewable or not, the efficiency must always be taken into account. The most profitable and clean energy is that which is not consumed.

Land Investment in Europe and Its Place Impacts Legare Street Press

The international multi-topic conference IMTIC 2008 was held in Pakistan during April 11-12, 2008. It was a joint venture between Mehran University, Jamshoro, Sindh and Aalborg University, Esbjerg, Denmark. Apart from the two-day main event, two workshops were also held: the Workshop on Creating Social Semantic Web 2.0 Information Spaces and the

Workshop on Wireless Sensor Networks. Two hundred participants registered for the main conference from 24 countries and 43 papers were presented; the two workshops had overwhelming support and over 400 delegates registered. IMTIC 2008 served as a platform for international scientists and the engineering community in general, and in particular for local scientists and the engineering community to share and cooperate in various fields of interest. The topics presented had a reasonable balance between theory and practice in multidisciplinary topics. The conference also had excellent topics covered by the keynote speeches keeping in view the local requirements, which served as a stimulus for students as well as experienced participants. The Program Committee and various other committees were experts in their areas and each paper went through a double-blind peer review process. The conference received 135 submissions of which only 46 papers were selected for presentation: an acceptance rate of 34%.

Lessons and Perspectives A&C Black

The older paradigm for photojournalists was to simply record events, with the

hope and frequently the expectation that people and their governments would be moved to respond to the injustices pictured; as witnessed by the impact of certain images during the Civil Rights movement and the Vietnam War. Given evolving media and political climates, however, including the billions of images now available online from all kinds of sources, the purpose and effectiveness of media, in particular of visual journalism, has been called into question. *Bending the Frame: Photojournalism, Documentary, and Citizenship*, by author and critic Fred Ritchin, addresses the new and emerging potentials for visual media to impact society. Ritchin examines the historical and contemporary uses of photography and related media to inspire social change. From the unintended consequences of citizen journalism and leaked images such as those from Abu Ghraib, to the new strategies by visual journalists and the targeted human rights projects by documentary photographers, the intention of this book is to provide a much-needed critical approach to the issues involved in such efforts. Also encompassing online efforts, uses of

video, and a diverse range of books and exhibitions, *Bending the Frame* aims for as wide-ranging and far-reaching a discussion as possible, asking the critical question: how can images promote new thinking and make a difference in the world?

African Fractals Hodder & Stoughton

I'm just as good as bloody Pierrepoint. In his small pub in Oldham, Harry is something of a local celebrity. But what's the second-best hangman in England to do on the day they've abolished hanging? Amongst the cub reporters and sycophantic pub regulars, dying to hear Harry's reaction to the news, a peculiar stranger lurks, with a very different motive for his visit. Don't worry. I may have my quirks but I'm not an animal. Or am I? One for the courts to discuss. *Martin McDonagh's Hangmen* premiered at the Royal Court Theatre, London, in September 2015.

Economic Evaluation of Innovative Technologies for Energy Efficiency Lynne Rienner Pub

With exponentially increasing population across the globe and shrinking resources, the concern of food security is looming large over the world community. To catch

up with the fierce pace of growth in all the sectors of development, ensuring uninhibited availability of food resources is a prime agenda. The growing global demand for food, feed, fiber and bio-based renewable materials, such as bio-fuels, is changing the conditions for genetic resources development and bio-resource production worldwide. The crucial role in ensuring food security is played by the agro-based industries and enterprises. Advances in plant genetic resources coupled with traditional knowledge of the local tribes and native practices facilitate achievement of food security.

Dictionary of Acronyms and Technical Abbreviations Free Press

This Dictionary covers information and communication technology (ICT), including hardware and software; information networks, including the Internet and the World Wide Web; automatic control; and ICT-related computer-aided fields. The Dictionary also lists abbreviated names of relevant organizations, conferences, symposia and workshops. This reference is important for all practitioners and users in the areas mentioned above, and those who consult or write technical material.

This Second Edition contains 10,000 new entries, for a total of 33,000.

Sewage Treatment Plants: Economic Evaluation of Innovative Technologies for Energy Efficiency aims to show how cost saving can be achieved in sewage treatment plants through implementation of novel, energy efficient technologies or modification of the conventional, energy demanding treatment facilities towards the concept of energy streamlining. The book brings together knowledge from Engineering, Economics, Utility Management and Practice and helps to provide a better understanding of the real economic value with methodologies and practices about innovative energy technologies and policies in sewage treatment plants.

I will ever be grateful for the almost psychic gift that enabled me to write Blithe Spirit in five days during one of the

darkest years of the war.' Written in 1941, *Blithe Spirit* remained the longest-running comedy in British Theatre for three decades thereafter. Plotted around the central role of one of Coward's best loved characters, a spirit medium Madame Arcati (originally performed by Margaret Rutherford) Coward's play is an escapist comedy about a man whose two previous wives return to haunt him. "A minor comic masterpiece of the lighter sort" Professor Allardyce Nicoll

Wireless Networks Information

Processing and Systems Faber & Faber *IoT Security Issues* looks at the burgeoning growth of devices of all kinds controlled over the Internet of all varieties, where product comes first and security second. In this case, security trails badly. This book examines the issues surrounding these problems, vulnerabilities, what can be done to solve the problem, investigating the stack for the roots of the problems and how programming and attention to good security practice can combat the problems today that are a result of lax security processes on the Internet of Things. This book is for people interested in understanding the vulnerabilities on the

Internet of Things, such as programmers who have not yet been focusing on the IoT, security professionals and a wide array of interested hackers and makers. This book assumes little experience or knowledge of the Internet of Things. To fully appreciate the book, limited programming background would be helpful for some of the chapters later in the book, though the basic content is explained. The author, Alasdair Gilchrist, has spent 25 years as a company director in the fields of IT, Data Communications, Mobile Telecoms and latterly Cloud/SDN/NFV technologies, as a professional technician, support manager, network and security architect. He has project-managed both agile SDLC software development as well as technical network architecture design. He has experience in the deployment and integration of systems in enterprise, cloud, fixed/mobile telecoms, and service provider networks. He is therefore knowledgeable in a wide range of technologies and has written a number of books in related fields.

Changing the Subject Diane Publishing Company

This book addresses aspects of rice

production in rice-growing areas of the world including origin, history, role in global food security, cropping systems, management practices, production systems, cultivars, as well as fertilizer and pest management. As one of the three most important grain crops that helps to fulfill food needs all across the globe, rice plays a key role in the current and future food security of the world. Currently, no book covers all aspects of rice production in the rice-growing areas of world. This book fills that gap by highlighting the diverse production and management practices as well as the various rice genotypes in the salient, rice-producing areas in Asia, Europe, Africa, the Americas, and Australia. Further, this text highlights harvesting, threshing, processing, yields and rice products and future research needs. Supplemented with illustrations and tables, this text is essential for students taking courses in agronomy and production systems as well as for agricultural advisers, county agents, extension specialists, and professionals throughout the industry.

New Money in Rural Areas Naval Inst Press

This report examines the reasons

Slobodan Milosevic, the then president of the Federal Republic of Yugoslavia, decided on June 3, 1999, to accept NATO's conditions for terminating the conflict over Kosovo. Drawing in part upon the testimony of Milosevic and other senior Serb and foreign officials who directly interacted with Milosevic, the report analyzes (1) the assumptions and other calculations that underlay Milosevic's initial decision to defy NATO's demands with regard to Kosovo, and (2) the political, economic, and military

developments and pressures, and the resulting expectations and concerns that most importantly influenced his subsequent decision to come to terms. While several interrelated factors, including Moscow's eventual endorsement of NATO's terms, helped shape Milosevic's decision to yield, it was the cumulative effect of NATO air power that proved most decisive. The allied bombing of Serbia's infrastructure targets, as it intensified, stimulated a growing interest among both the Serbian public and Belgrade officials to

end the conflict. Milosevic's belief that the bombing that would follow a rejection of NATO's June 2 peace terms would be massively destructive and threatening to his continued rule made a settlement seem imperative. Also examined are some implications for future U.S. and allied military capabilities and operations. *Sewage Treatment Plants* IWA Publishing
