An Introduction Vintage
The Ethics of Sex: An Introduction
systematically and comprehensively
examines the ethical issues surrounding

the concept of sex. It addresses important questions such as: How can we approach questions of sexual ethics in a philosophical way? Must we give affirmative consent to all sexual activity, and what would be the impact of implementing an affirmative consent standard into law? Can our dating preferences ever be considered a form of discrimination? Is BDSM sex

compatible with feminism? Should we promote monogamy as the best way to live? Is it harmful to have a relationship with a robot? Should sex work be decriminalized? Is there a right to sex? Including discussion questions and suggestions for further reading at the end of each chapter *The Ethics of Sex* is the perfect philosophical introduction to the perennially topical issue, and ideal reading for students taking courses within the fields of applied ethics, sociology, law, religion and politics.

The data behind a distinct form of racism in online dating *The Dating Divide* is the first comprehensive look at "digital-sexual racism," a distinct form of racism that is mediated and amplified through the impersonal and anonymous context

of online dating. Drawing on large-scale behavioral data from a mainstream dating website, extensive archival research, and more than seventy-five in-depth interviews with daters of diverse racial backgrounds and sexual identities, Curington, Lundquist, and Lin illustrate how the seemingly open space of the internet interacts with the loss of social inhibition in cyberspace contexts, fostering openly expressed forms of sexual racism that are rarely exposed in face-to-face encounters. *The Dating Divide* is a fascinating look at how a contemporary conflux of individualization, consumerism, and the proliferation of digital technologies has given rise to a unique form of gendered racism in the era of swiping right—or left. The internet is often heralded as an

equalizer, a seemingly level playing field, but the digital world also acts as an extension of and platform for the insidious prejudices and divisive impulses that affect social politics in the "real" world. Shedding light on how every click, swipe, or message can be linked to the history of racism and courtship in the United States, this compelling study uses data to show the racial biases at play in digital dating spaces.

"What does everyone in the modern world need to know? [The author's] answer to this most difficult of questions uniquely combines the hard-won truths of ancient tradition with the stunning revelations of cutting-edge scientific research. [The author discusses] discussing discipline, freedom, adventure and responsibility, distilling the world's wisdom into 12 practical and profound rules for life"-- Penguin

Most men today are sent off into society with a broken belief system, which they use to make choices, that get them terrible results with life and women. Men

have been conditioned to be the quintessential "nice guy." They're trained to be overly humble, kind to a fault, and that just "being themselves" is enough to attract and keep the woman of their dreams. Men are told to believe that conventional masculinity is toxic, and to put women ahead of their own interests, passions, and purpose. This has led to an entire generation of men forming very unhealthy attachments to women that they, unfortunately, often make their sole focus of their lives. The playbook to women and life has changed, but most men missed the memo. Do you want to succeed, and level up in every area of your life? If so, then this book explains: - The importance of maximizing your looks, money, social status, and game. - Why

it's essential to get genuine burning desire from a woman who wants to date you. - The top 20 red flags that you must vet women for a long term relationship. - How to become one of the top 20% of men that women swipe right for on online dating. - Why smart men avoid marriage. And much more. This book exposes the comforting lies you've been told throughout your life for what they really are. Enabling you to become a truly authentic Alpha that chases excellence, and leads a successful passion-filled life.

A Novel Penguin

"If online dating can blunt the emotional pain of separation, if adults can afford to be increasingly demanding about what they want from a relationship, the effect of online dating seems positive. But what

if it's also the case that the prospect of finding an ever more compatible mate with the click of a mouse means a future of relationship instability, a paradox of choice that keeps us chasing the illusive bunny around the dating track?" It's the mother of all search problems: how to find a spouse, a mate, a date. The escalating marriage age and declining marriage rate mean we're spending a greater portion of our lives unattached, searching for love well into our thirties and forties. It's no wonder that a third of America's 90 million singles are turning to dating Web sites. Once considered the realm of the lonely and desperate, sites like eHarmony, Match, OkCupid, and Plenty of Fish have been embraced by pretty much every demographic. Thanks to the increasingly efficient algorithms

that power these sites, dating has been transformed from a daunting transaction based on scarcity to one in which the possibilities are almost endless. Now anyone—young, old, straight, gay, and even married—can search for exactly what they want, connect with more people, and get more information about those people than ever before. As journalist Dan Slater shows, online dating is changing society in more profound ways than we imagine. He explores how these new technologies, by altering our perception of what's possible, are reconditioning our feelings about commitment and challenging the traditional paradigm of adult life. Like the sexual revolution of the 1960s and '70s, the digital revolution is forcing us to ask new questions about what

constitutes “normal”: Why should we settle for someone who falls short of our expectations if there are thousands of other options just a click away? Can commitment thrive in a world of unlimited choice? Can chemistry really be quantified by math geeks? As one of Slater’s subjects wonders, “What’s the etiquette here?” Blending history, psychology, and interviews with site creators and users, Slater takes readers behind the scenes of a fascinating business. Dating sites capitalize on our quest for love, but how do their creators’ ideas about profits, morality, and the nature of desire shape the virtual worlds they’ve created for us? Should we trust an industry whose revenue model benefits from our avoiding monogamy? Documenting the untold story of the

online-dating industry’s rise from ignominy to ubiquity—beginning with its early days as “computer dating” at Harvard in 1965—Slater offers a lively, entertaining, and thought provoking account of how we have, for better and worse, embraced technology in the most intimate aspect of our lives.

Get ready to question everything you’ve been told about charity, and to find out how you can truly succeed at making the world a better place. Many of us donate to charitable causes, and millions more work or volunteer for non-profit organizations. Yet virtually none of us have been taught what it means to succeed at doing good, let alone how to do so. In short, we’ve never been

encouraged to treat charity with the seriousness and rigor it deserves. How to be Great at Doing Good is a complacency-shattering guidebook for anyone who wants to actually change the world, whether as a donor, a volunteer, or a non-profit staffer. Drawing on eye-opening studies in psychology and human behavior, surprising interviews with philanthropy professionals, and the author's fifteen years of experience founding and managing top-rated non-profits, this book is an essential read for anyone who wants to do more good with their time and money. Find out how Bill Gates and a team of MIT grads are saving thousands of lives by applying business principles to charity work - and how we can too Peer inside our brains as we

donate, and discover how the same chemical forces that make us crave junk food and sex can steer us toward bad charity decisions See why following our passion and doing what we're good at can actually doom our efforts to improve the world Learn how two seemingly identical charities can have jaw-dropping differences in impact, and find out how to pick the best one when donating Sure to generate controversy among non-profits and philanthropists who prefer business as usual, How to be Great at Doing Good reveals that a more calculated, effective approach to charity work isn't just possible - it's absolutely necessary for those who want to succeed at changing the world.

The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware of it. The hidden brain decides

whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge

science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

A searing portrait of suburbia, friendship, and family strained by a devotion to false appearances. In an idyllic suburb, four young families quickly form a neighborhood clique, their friendships based on little more than the ages of their children and a shared sense of camaraderie. When one of the couples, Paige and Gene Edwards, adopt a four-year-old girl from Russia, the group's loyalty and morality is soon called into question. Are the Edwards unkind to their new daughter? Or is she a difficult child with hidden destructive

Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes and behavior. Yet attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that

other people—say, rich people— favor something may be sufficient to make another person favor it. People’s own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People’s belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes of *The Handbook of Attitudes* provide authoritative, critical surveys of theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. This second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations,

aggression, migrations, advertising, accounting, education, and the environment.

Conquering the dating market—from an economist’s point of view After more than twenty years, economist Paul Oyer found himself back on the dating scene—but what a difference a few years made. Dating was now dominated by sites like Match.com, eHarmony, and OkCupid. But Oyer had a secret weapon: economics. It turns out that dating sites are no different than the markets Oyer had spent a lifetime studying.

Monster.com, eBay, and other sites where individuals come together to find a match gave Oyer startling insight into the modern dating scene. The arcane

language of economics—search, signaling, adverse selection, cheap talk, statistical discrimination, thick markets, and network externalities—provides a useful guide to finding a mate. Using the ideas that are central to how markets and economics and dating work, Oyer shows how you can apply these ideas to take advantage of the economics in everyday life, all around you, all the time. For all online daters—and for anyone else swimming in the vast sea of the information economy—this book uses Oyer’s own experiences, and those of millions of others, to help you navigate the key economic concepts that drive the modern age.

A long-time chief data scientist at

Amazon shows how open data can make everyone, not just corporations, richer. Every time we Google something, Facebook someone, Uber somewhere, or even just turn on a light, we create data that businesses collect and use to make decisions about us. In many ways this has improved our lives, yet, we as individuals do not benefit from this wealth of data as much as we could. Moreover, whether it is a bank evaluating our credit worthiness, an insurance company determining our risk level, or a potential employer deciding whether we get a job, it is likely that this data will be used against us rather than for us. In *Data for the People*, Andreas Weigend draws on his years as a consultant for commerce, education, healthcare, travel and finance

companies to outline how Big Data can work better for all of us. As of today, how much we benefit from Big Data depends on how closely the interests of big companies align with our own. Too often, outdated standards of control and privacy force us into unfair contracts with data companies, but it doesn't have to be this way. Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us. Only then can we the people get back more from Big Data than we give it. Big Data is here to stay. Now is the time to find out how we can be empowered by it. Becoming your best self requires honesty, self-awareness, hard work and a little help. Through their website and podcasts, Max and Miller have already helped over one million guys take their first steps toward Ms. Right. They have collected all of their findings in *Mate*, an evidence-driven, seriously funny playbook that will teach you to become a

Bograd Weld Biography Award
Shortlisted for the J. Anthony Lukas Book Prize The deeply reported story of one indelible family transplanted from rural China to New York City, forging a life between two worlds In 2014, in a snow-covered house in Flushing, Queens, a village revolutionary from Southern China considered his options. Zhuang Liehong was the son of a fisherman, the former owner of a small tea shop, and the spark that had sent his village into an uproar—pitting residents against a corrupt local government. Under the alias Patriot Number One, he had stoked a series of pro-democracy protests, hoping to change his home for the better. Instead, sensing an impending crackdown, Zhuang and his wife, Little Yan, left their infant son with relatives

and traveled to America. With few contacts and only a shaky grasp of English, they had to start from scratch. In Patriot Number One, Hilgers follows this dauntless family through a world hidden in plain sight: a byzantine network of employment agencies and language schools, of underground asylum brokers and illegal dormitories that Flushing's Chinese community relies on for survival. As the irrepressibly opinionated Zhuang and the more pragmatic Little Yan pursue legal status and struggle to reunite with their son, we also meet others piecing together a new life in Flushing. Tang, a democracy activist who was caught up in the Tiananmen Square crackdown in 1989, is still dedicated to his cause after more than a decade in exile. Karen, a college

graduate whose mother imagined a bold American life for her, works part-time in a nail salon as she attends vocational school, and refuses to look backward. With a novelist's eye for character and

detail, Hilgers captures the joys and indignities of building a life in a new country—and the stubborn allure of the American dream.
