Sound Reproduction: The Acoustics and Psychoacoustics of Loudspeakers and Rooms, Third Edition explains the physical and perceptual processes that are involved in sound reproduction and demonstrates how to use the processes to create high-quality listening experiences in stereo and multichannel formats. Understanding the principles of sound production is necessary to achieve the goals of sound reproduction in spaces ranging

from recording control rooms and home listening rooms to large cinemas. This revision brings new science-based perspectives on the performance of loudspeakers, room acoustics, measurements and equalization, all of which need to be appropriately used to ensure the accurate delivery of music and movie sound tracks from creators to listeners. The robust website ([www.routledge.com/cw/toole](http://www.routledge.com/cw/toole)) is the perfect companion to this necessary resource.

In this personal journey through a unique performing art, David Copperfield profiles some of the world's most groundbreaking magicians. From the sixteenth-century magistrate who wrote an early book on conjuring, to the roaring twenties and the man who fooled Houdini, to the woman who levitated, vanished, and caught bullets in her bare hands, David Copperfield's *History of Magic* takes you on a wild journey through the remarkable feats of some of the greatest magicians in history. The result is a sweeping tale that reveals how these astonishing performers were outsiders who used magic to escape class, challenge conventions, transform popular culture, explore the innermost workings of the human mind, and inspire scientific discovery. Their incredible stories are complemented by more than 100 never-before-seen photographs of artifacts from Copperfield's exclusive Museum of Magic, including a sixteenth-century manual on sleight-of-hand; Houdini's straitjackets, handcuffs, and water torture chamber; Dante's famous sawing-in-half apparatus; Alexander's high-tech turban that allowed him to read people's minds; and even some coins that may have magically passed through the hands of Abraham Lincoln. By the end of the book, you'll be sure to share Copperfield's passion for the power of magic.

This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. This volume surveys our current scientific understanding of the terrestrial aurora. It is organized into eleven reviews detailing theoretical and observational aspects of characteristic auroral morphologies, and how these in turn are organized according to local time, latitude, and activity level. Popular descriptions often attribute the aurora to the interaction of charged particles from the solar wind with atoms in the upper atmosphere. In fact, most auroras are not the result of direct entry of solar wind particles. Rather, as detailed in this volume, auroral particle acceleration and generation of auroral forms occur primarily within the magnetosphere. Importantly, many key aspects of the aurora – most notably, the physical mechanisms responsible for the generation of discrete arcs – are still unexplained, and auroral physics continues to be an active area of scientific research. Each review chapter therefore includes a summary of open questions for further investigation. Providing the first comprehensive review of the terrestrial aurora in two decades, this book will aid both active researchers and newcomers interested in understanding the current state of the field. Previously published *Space Science Reviews* in the Topical Collection "Auroral Physics"
