Psychopathology has been designed to provide students with a comprehensive coverage of both psychopathology and clinical practice, including extensive treatment techniques for a range of mental health issues. The text is designed to be accessible to students at a range of different learning levels, from first year undergraduates to post-graduate researchers and those undergoing clinical training. Psychopathology is primarily evidence and research based, with coverage of relevant research from as recently as 2013, making it useful to researchers as well as clinicians. The emphasis in the book is on providing students

with a real insight into the nature and experience of mental health problems, both through the written coverage and by providing a range of video material covering personal accounts of mental health problems. The text is integrated with a wide variety of teaching and learning features that will enable facilitators to teach more effectively, and students to learn more comprehensively. Many of these features have been updated for the new edition and new material has been included to reflect the changes in DSM-5. Features include Focus Points that discuss contentious or topical issues in detail, Research Methods boxes showing how clinical psychologists do research on psychopathology, and Case Histories detailing a range of mental health problems. Online resources An all new student website is available at www.wiley-psychopathology.com. Escalating energy demand may be the most important issue facing the United States and the world today. There is little disagreement that research and development (R&D) is needed to develop new energy technologies for the future; however, there is less agreement over the specific research agenda to be pursued and how that agenda is funded. This book addresses the social importance of new energy technologies, illustrates policy-relevant applications of evaluation techniques and proposes new perspectives for a US energy investment strategy. Through detailed examples related to solar, geothermal, and vehicle technologies, the authors outline the need for robust evaluation methods to document social returns to taxpayers' R&D investments. They argue that such evaluations are necessary for the public sector to make rational decisions about the allocation of its scarce resources. The evaluation methods considered involve developing alternative technology and market pathways from which the benefits of government research can be measured. Researchers and graduate students, policy makers involved in energy technology, and energy R&D program managers will all find much of value in this important and timely book.

In this major reconsideration of Herman Melville's life and work, Michael Paul Rogin shows that Melville's novels are connected both to the important issues of his time and to the exploits of his patrician and politically prominent family—which, three generations after its Revolutionary War heroes, produced an alcoholic, a bankrupt, and a suicide. Rogin argues that a history of Melville's fiction, and of the society represented in it, is also a history of the writer's family. He describes how that family first engaged Melville in and then isolated him from American political and social life. Melville's brother and father-in-law are shown to link *Moby-Dick* to the crisis over expansion and slavery. *White-Jacket* and *Billy Budd*, which concern shipboard conflicts between masters and seamen, are related to an execution at sea in which Melville's cousin played a decisive part. The figure of Melville's father haunts *The Confidence Man*, whose subject is the triumph of the marketplace and the absence of authority. A provocative study of one of our supreme literary artists.

Although psychoanalytic theory is one of the most potent and influential tools in contemporary literary criticism, to date it has had very little impact on the study of African American literature. Critical methods from the disciplines of history, sociology, and cultural studies have dominated work in the field. Now, in this exciting new book by the author of *Domestic Allegories: The Black Heroine's Text at the Turn of the Century*, Claudia Tate demonstrates that psychoanalytic paradigms can produce rich and compelling readings of African American textuality. With clear and accessible summaries of key concepts in Freud, Lacan, and Klein, as well as deft reference to the work of contemporary psychoanalytic critics of literature, Tate explores African-American desire, alienation, and subjectivity in neglected novels by Emma Kelley, W.E.B. Du Bois, Richard Wright, Zora Neale Hurston, and Nella Larsen. Her pioneering approach highlights African American textual realms within and beyond those inscribing racial oppression and modes of black resistance. A superb introduction to psychoanalytic theory and its applications for African American literature and culture, this book creates a sophisticated critical model of black subjectivity and desire for use in the study of African American texts.
