HARRELL ORLANDO

Investigating Archaeological Cultures

Springer Science & Business Media

The book aims at speeding up undergraduates to attain interest in advanced concepts and methods in science and engineering.

Neolithic Farming in Central Europe

Oxbow Books

Agglutinated foraminifera are among the most widely distributed and abundant groups of marine meiofauna in some

environments (e. g. marshes, deep-sea). They are tolerant of environmental extremes, tending to live where the evolutionarily more advanced calcareous foraminifera cannot survive. However, largely because of historical reasons, the amount of scientific effort invested in this group has been small in comparison to studies of other marine organisms. The NATO Advanced Studies Institute conference on the paleoecology, biostratigraphy, paleoceanography and taxonomy of agglutinated foraminifera in Tübingen September 17-29, 1989, was a direct outgrowth of two previous

workshops on agglutinated foraminifers held in Amsterdam in September 1981 (IW AF I) and in Vienna in June 1986 (IW AF 11). As such, the TUBingen conference constitutes the Third International Workshop on Agglutinated Foraminifera (IW AF III) and was organised to provide a platform for synthesizing the current state of knowledge on this group of organisms, and to strengthen interactions between basic research and applied micropaleontology. One of the main underlying themes of the conference was to identify topics in the paleoecology, biostratigraphy, paleoceanography and taxonomy of agglutinated foraminifera which are in urgent need of further research. About 80 scientists and students from 5 continents participated

in the TUBingen conference, which is one measure of the growth in interest in agglutinated foraminifers over the past decade. During four days of technical sessions, scientific results were communicated in the form of 34 oral presentations and 15 poster displays. Design Media Publishing Limited
This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36

Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. 'Masterpieces of Swiss Entrepreneurship' brings unique

learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies -- without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the

path of high growth or of maximum control, as they are often mutually exclusive. Gina Domanig, Managing Partner, Emerald Technology Ventures, Zurich

New Techniques in Sediment Core Analysis Springer Science & Business Media

"Cookery and Dining in Imperial Rome" by Apicius is the oldest known cookbook in existence. There are recipes for cooking fish and seafood, game, chicken, pork, veal, and other domesticated animals and birds, for vegetable dishes, grains, beverages, and sauces; virtually the full range of cookery is covered. There are also methods for preserving food and revitalizing them in ways that are surprisingly still relevant.

Nutrition and Diet Therapy for Nurses

Woodhead Publishing

Perhaps assembled around the fifth century CE or earlier, Apicius, often known as *De re culinaria* or *De re coquinaria* (On the Subject of Cooking), is a body of Roman cooking recipes. With subsequent recipes adding Vulgar Latin (such as *ficatum* and *bullire*) to earlier recipes employing Classical Latin, its vocabulary is in many respects closer to Vulgar than to Classical Latin. Based on the fact that one of the two manuscripts is headed with the words "API CAE," or rather, because a few recipes are attributed to Apicius in the text, the book has been ascribed to an otherwise unknown Caelius Apicius: *Patinam Apicianam sic facies* (IV, 14). It has alternatively been ascribed to Marcus Gavius Apicius, a Roman gourmet who

flourished during Tiberius's rule sometime in the first century CE. Furthermore, numerous Roman chefs from the first century CE could have penned the book.

Cookery and Dining in Imperial Rome Springer

This honorary volume offered to Paolo Biagi for his 65th birthday brings together papers by his friends, former students and colleagues, who have shared with him research experiences on different geographical regions and topics. Paolo Biagi, one of the outstanding Italian prehistorians, was elected in 2009 as Honorary Fellow of the Society of Antiquaries of London in recognition of his original work in the field, studying the environmental contexts and lithic technologies of a

wide range of human cultures, from Europe to the Indian sub-continent. The twelve papers in this volume cover the fields of Paolo Biagi's scientific activity, extending from the prehistory from northern Italy, the Adriatic and the Aegean, to the Indus Valley. The topics covered include the Mesolithic-Neolithic transition, the Neolithization of the Mediterranean Basin, and archaeometric approaches to prehistoric archaeology. Other contributions are look at matters philosophical and theoretical, and offer an original view of the human past. *Rediscovering Recherche Bay* Cambridge University Press

Designing Food Shops requires different skills compared to other retail spaces. Firstly of all you need to consider the complexity of a public space that is subject to stringent hygiene and health and safety requirements. Also there is the functionality to consider. the space needs to work in that it is planned to avoid overloading, maintaining the flow of both workers, consumers and the food itself. Colours, Furniture, Materials and Lighting all need to be carefully selected to show off the food. With separate chapters on Exterior Design, Space Design, Food Service Counters, Display and Fixtures and Fittings the book uses full colour examples from different stores including Snog, Polka Gelato, Raoul's, Bea's of Bloomsbury and William

Curley's in London alongside many other's from around the world.

Tracking Environmental Change Using Lake Sediments Martino Fine Books

This volume details all British sites that have yielded fossil reptiles, describing in detail the fifty most important localities and providing an extensive bibliography of everything published on British Fossil reptiles since 1676.

The Roman Cookery Book Legare Street Press

This wide-ranging volume brings together the results of global research on weapon technology, hunting strategies, and technological organization spanning the Middle Paleolithic through the ethnographic present, and the geographical breadth of

the five inhabited continents. Integrating archaeological, experimental, and ethnoarchaeological perspectives, the book paints a vibrant picture of the technological know-how, decision-making processes, and organizational logistics associated with hunters armed with spears or arrows. Unlike most works on archaeological subjects, the findings presented here are bound to neither time nor place, but are applicable in any context in which spears, bows, and/or arrows are in use.

Masterpieces of Swiss Entrepreneurship Springer Science & Business Media
and Acknowledgements This book attempts to describe the earliest known Academy of Sciences). Without their assistance in planktonic foraminifera, of

the Jurassic, and to particular, our understanding of the early planktonic portray their evolution into the widespread and foraminifera would have been much the poorer. holoplanktonic taxa of the Early Cretaceous. Much of the SEM photography has been specially prepared for the book by two of the In doing this we estimate we have dealt with over 135 species, belonging to 26 genera. It has authors (M. K. B-F. and J. E. W.) on the University been our policy to illustrate, with SEM imagery College, London (Zeiss DSM 940) and The Natural History Museum's (Hitachi S 2500) whenever possible, holotypes or other primary types, topotypes and other reliable specimens. To instruments, respectively. Many more illustrations this end, we have been generously helped by

many have been digitized from the original negatives micropalaeontologists and other technical workers, held in both those institutions from earlier publications without whose assistance the book could not have been prepared. A new English interpretation of Fra Luca Pacioli's (the Father of Accounting) treatise on accounting, commemorating the 500th anniversary of its original

publication in Venice in 1494. His PARTICULARIS was the first codification of double-entry accounting & a guide for merchants on sound accounting & business practice: "If you are in business & do not know all about your money, it will go like flies, that is, you will lose it."--(Luca Pacioli) Originally written not in Latin, but in vernacular Italian, it was a tremendous success, & earned Pacioli his place in history. "...the name Pacioli is linked with famous artists, writers, & political figures of his day"--(THE WALL STREET JOURNAL, January 29, 1993). This very readable translation by Dr. Jeremy Cripps brings Pacioli's material to life, & captures the enduring nature of the underlying principles of accounting & business. To order: for U.S. orders, send \$45.00 check or money order (includes

shipping & handling); for foreign orders send \$60.00 (in U.S. dollars). Will accept purchase orders from U.S. institutions. Sorry, no credit cards. The Pacioli Society, Albers School of Business, Seattle University, 900 Broadway, Seattle, WA 98122.

Microfabrication and precision engineering is an increasingly important area relating to metallic, polymers, ceramics, composites, biomaterials and complex materials. Micro-electro-mechanical-systems (MEMS) emphasize miniaturization in both electronic and mechanical components. Microsystem products may be classified by application, and have been applied to a variety of fields, including medical,

automotive, aerospace and alternative energy. Microsystems technology refers to the products as well as the fabrication technologies used in production. With detailed information on modelling of micro and nano-scale cutting, as well as innovative machining strategies involved in microelectrochemical applications, microchannel fabrication, as well as underwater pulsed Laser beam cutting, among other techniques, Microfabrication and Precision Engineering is a valuable reference for students, researchers and professionals in the microfabrication and precision engineering fields. - Contains contributions by top industry experts - Includes the latest techniques and strategies - Special emphasis given to state-of-the art research and

development in microfabrication and precision engineering

The Irish Stone Age Springer

In this volume, recent advances in analytical and logging technology and their application to the analysis of sediment cores are presented.

Developments in providing access to core data and associated datasets, and advances in data mining technology in order to integrate and interpret new and legacy datasets within the wider context of seafloor studies are also discussed.

Microfabrication and Precision Engineering Springer

Hungary lies in the central part of the Pannonian Basin, surrounded by the ranges of the Alps, Carpathians, and Dinarides. The geology of the country can be summarized as a process

whereby complicated plate collision-type orogeny was followed by the formation of a young basin in which a relatively complete sequence of basin infill has been preserved. The handbook “Geology of Hungary” presents an outline of the main features of the geology and geohistory of the region in a single volume, illustrated by a great number of color figures and photos for the benefit of foreign geoscientists interested in this area. The volume follows the evolutionary history of the major structural units prior to their juxtaposition in the Tertiary and discusses the subsequent evolution of the Pannonian Basin. Due to the geohistorical approach to this study it was necessary to extend the scope of the discussion beyond the present-day

political boundaries of Hungary, to cover most of the Pannonian region.

Foundations of Classical Mechanics

Psychology Press

Pottery is the most ubiquitous find in most historical archaeological excavations and serves as the basis for much research in the discipline. But it is not only its frequency that makes it a prime dataset for such research, it is also that pottery embeds many dimensions of the human experience, ranging from the purely technical to the eminently symbolic. The aim of this book is to provide a cutting-edge theoretical and methodological framework, as well as a practical guide, for archaeologists, students and researchers to study ceramic assemblages. As opposed to the conventional typological approach,

which focuses on vessel shape and assumed function with the main goal of establishing a chronological sequence, the proposed framework is based on the technological approach. Such an approach utilizes the concept of chaîne opératoire, which is geared to an anthropological interpretation of archaeological objects. The author offers a sound theoretical background accompanied by an original research strategy whose presentation is at the heart of this book. This research strategy is presented in successive chapters that are geared to explain not only how to study archaeological assemblages, but also why the proposed methods are essential for achieving ambitious interpretive goals. In the heated debate on the equation stating that “pots equal

people”, which is a rather fuzzy reference to assumed relationships between (mostly) ethnic groups and pottery, technology enables us to propose with conviction the equation “pots equal potters”. In this way, a well-founded history of potters is able to achieve a much better cultural and anthropological understanding of ancient societies.

Inselbergs Springer Nature
2012 Reprint of 1958 New York Edition.
Exact facsimile of the original edition,
not reproduced with Optical Recognition
Software. This is an English translation of
the oldest known cookbook in existence.
The book was originally written for
professional cooks working in Ancient
Rome, and contains actual recipes
presented in the form of a cookbook. The

work is translated with the intention of
providing an actual cookbook rather than
as a scholarly translation of an ancient
text. Illustrated. The text is organized in
ten books which are arranged in a
manner similar to a modern cookbook:
Epimeles - The Careful Housekeeper
Sarcoptes - The Meat Mincer Cepuros -
The Gardener Pandecter - Many
Ingredients Ospreon - Pulse Aeropetes -
Birds Polyteles - The Gourmet Tetrapus -
The Quadruped Thalassa - The Sea
Halieus - The Fisherman

Text-book of Paleontology Рипол

Originally published in 1942, this book
was based upon archaeological fieldwork
carried out by the Harvard
Archaeological Expedition to Ireland from
1932 to 1936. The aim of the Expedition

'was to embody in the field three of the techniques of modern anthropology - physical anthropology, social anthropology and archaeology - directed towards research on the same problem: the origin and development of the races and cultures of Ireland.' Numerous illustrative figures and reference lists are also included. This book will be of value to anyone with an interest in the prehistory of Ireland, archaeology and anthropology.

American Publishers' Circular and Literary Gazette Bigfontbooks

This first monograph in the EARTH series, *The dynamics of non-industrial agriculture: 8,000 years of resilience and innovation*, approaches the great variety of agricultural practices in human terms.

It focuses on the relationship between plants and people, the complexity of agricultural processes and their organisation within particular communities and societies. Collaborative European research among archaeologists, archaeobotanists, ethnographers, historians and agronomists using a broad analytical scale of investigation seeks to establish new common ground for integrating different approaches. By means of interdisciplinary examples, this book showcases the relationship between people and plants across wide ranging and diverse spatial and temporal milieus, including crop diversity, the use of wild foodstuffs, social context, status and choices of food plants.
