In the Information Society, the smart card, or smart device with its processing power and link to its owner, will be the potential human representation or delegate in Ambient Intelligence (Pervasive Computing), where every appliance or computer will be connected, and where control and trust of the personal environment will be the next decade challenge. Smart card research is of increasing importance as the need for information security grows rapidly. Smart cards will play a very large role in ID management in secure systems. In many computer science areas, smart cards introduce new dimensions and opportunities. Disciplines like hardware design, operating systems, modeling systems, cryptography and distributed systems find new areas of applications or issues; smart cards also create new challenges for these domains. CARDIS, the IFIP Conference on Smart Card Research and Advanced Applications, gathers researchers and technologists who are focused in all aspects of the design, development, deployment, validation and application of smart cards or smart personal

devices. This volume contains the 20 papers that have been selected by the CARDIS Program Committee for presentation at the 6th International Conference on Smart Card Research and Advanced Applications (CARDIS 2004), which was held in conjunction with the IFIP 18th World Computer Congress in Toulouse, France in August 2004 and sponsored by the International Federation for Information Processing (IFIP). With 20% of the papers coming from Asia, 20% from America, and 60% from Europe, the competition was particularly severe this year, with only 20 papers selected out of 45 very good submissions. Smart Card Research and Advanced Applications VI presents the latest advances in smart card research and applications, and will be essential reading for developers of smart cards and smart card applications, as well as for computer science researchers in computer architecture, computer security, and cryptography.

If you're reading this, I'm assuming it's because you want to become more prepared for an EMP (electromagnetic pulse) attack. After all, the name of this book is "EMP Attack Survival Manual" is it not? When the light goes out across the country because of an EMP attack, they are going to stay out for a long, long time. It will take over a decade for the United States to fully recover, and it's estimated that up to 90% of the population would die during that time. And there is a strong possibility of an EMP happening in your lifetime because guess what, if our enemies want to cripple us, they'll do it by knocking down our power grid. If you're smart, you'll prepare for an EMP attack, and if you're even more smart, you'll prepare for it the way smart people prepare for it. That's exactly what this book is about: teaching you how you can prepare for an EMP attack like a smart person through ten very simple steps. These ten steps are: Step #1: Will You Survive The EMP Blast? (Considerations For An EMP Attack) Step #2: Supplies, Supplies, Supplies Step #3: Your Security Plan Step #4: Bartering (Your Economic Life After The EMP) Step #5: Faraday Cage All The Way Step

#6: Building Alliances Step #7: Consider Hygiene Issues Step #8: The Actions You'll Be Taking Right After The EMP Step #9: Will It Really Be That Bad? (What Life Will Be Like After The EMP) Step #10: The Effects of the EMP On Your Body Now if you're already a smart person who's fully prepared for an EMP attack like a smart person should, there's probably not much that this book is going to teach you. But if you're just a normal person without any preparations for an EMP whatsoever and you're looking to start your research on how you should prepare for an EMP attack? I would be wise and turn the page and start reading.
