Facilitating Community Research for Social Change asks: what does ethical research facilitation look like in projects that seek to move toward social change? How can scholars weave political and social justice through multiple levels of the research process? This edited collection presents chapters that investigate research facilitation in ways that specifically attempt to disrupt and challenge anti-Indigenous and anti-Black racism, ableism, homophobia, transphobia, patriarchy, and sexism to work toward social change. It also explores what it means to develop facilitation practices across multiple contexts and research settings, including specific facilitation methods considered by researchers working with visual and community-based methods with Black, Indigenous, and racialized communities. The complexities of how scholars negotiate decisions within their research with people and communities have an effect not only on how researchers construct their participants and communities, but also on the overall purpose of projects, the ways their projects are shared and disseminated, and what is learned in the doing of facilitation. This book will be of great interest to both emerging and established researchers working within the social sciences. It specifically attends to diverse fields within the social sciences that include health, media studies, environmental studies, social work, sociology, education, participatory visual research methodologies, as well as the evolving field of digital humanities.

A Population-Based Approach Mosby

Public health practice focuses on the prevention of disease and disability as a means of promoting the health of individuals and their communities. Achieving this is dependent on nurses and public health practitioners implementing the core functions of practice—assessment, assurance, and policy development. Because the public health workforce is composed of individuals from a number of disciplines with varying areas of expertise, there is a clear need for a thorough examination of the core competencies necessary for successful public health based on community needs. Developed as an advanced text for students in public and community health nursing, *Public and Community Health Nursing Practice* presents a comprehensive summary of the core functions of population-based practice. This practice is the cornerstone of the Healthy People 2010 national objectives, and the foundation upon which the health of a given community may be ensured. The book's population-based approach, theoretical content, and emphasis on evidence-based research are perfectly suited for faculty and students in nursing, public health, and behavioral medicine. Author Demetrius James Porche also includes current public health and nursing practice, making this a unique and indispensable reference for public and community health nurses and nursing administrators, as well as practitioners in other specialties, such as family or primary care nursing. The book also includes appendices, illustrations, tables, and chapter summaries that reiterate important public and community population-based health nursing content.

Working with Children and Their Parents SAGE

How do communities protect and improve the health of their populations? Health care is part of the answer but so are environmental protections, social and educational services, adequate nutrition, and a host of other activities. With concern over funding constraints, making sure such activities are efficient and effective is becoming a high priority. *Improving Health in the Community* explains how population-based performance monitoring programs can help communities point their efforts in the right direction. Within a broad definition of community health, the committee addresses factors surrounding the implementation of performance monitoring and explores the "why" and "how to" of establishing mechanisms to monitor the performance of those who can influence community health. The book offers a policy framework, applies a multidimensional model of the determinants of health, and provides sets of prototype performance indicators for specific health issues. *Improving Health in the Community* presents an attainable vision of a process that can achieve community-wide health benefits.

An Introduction to Community and Primary Health Care Springer Publishing Company

Public health nurses focus on population health through continuous surveillance and assessment of multiple health determinants to promote health and wellness, prevent disease, disability and premature death, and improve the quality of life. These RNs address population health priorities through identifying, implementing, and evaluating universal and targeted evidence-based programs and services that provide primary, secondary, and tertiary preventive interventions. Public health nursing practice emphasizes primary prevention with the goal of achieving health equity. The American Nurses Association convened a workgroup of nurse experts to create a definitive resource that addresses the interrelated issues of professional accountability, autonomy, and responsibilities of the public health nurse. With input from across the nursing profession, the workgroup developed *Public Health Nursing: Scope and Standards of Practice, 2nd Edition*. This comprehensive, up-to-date delineation of the competent level of nursing practice and professional performance of public health nurses applies in all practice levels and settings. The publication's scope of practice addresses what is expected of all public health nurses by specifying the who, what, where, when, why, and how of their practice. The detailed discussion of that scope of practice gives the context—the underlying assumptions, characteristics, environments and settings, education and training requirements, key issues and trends, and ethical and conceptual bases of the specialty—needed to understand and use the public health nursing standards of practice. All public health nurses are held accountable to these 17 standards, which provide a framework for evaluating outcomes, goals, and their specialty practice. The set of specific competencies accompanying each standard serves as evidence of minimal compliance with that standard. While this foundational volume is primarily for those directly involved with public health nursing practice, education, and research, other nursing and allied healthcare providers, researchers, and scholars will find value in this content. In addition, it is a resource for employers, insurers, lawyers, regulators, policy makers, and stakeholders. About ANA's Specialty Nursing Standards Since the late 1990s, ANA has partnered with other nursing organizations to establish a formal process for recognition of specialty areas of nursing practice. This includes the criteria for approving the specialty itself and the scope statement and an acknowledgment by ANA of the standards of practice for that specialty. Because of the significant changes in the evolving nursing and healthcare environments, ANA's approval of specialty nursing scope statements and its acknowledgment of specialty standards of practice remain valid for five years, starting from the publication date of the documents. The standards in this publication are based on language from ANA's *Nursing: Scope and Standards of Practice, Second Edition*, a helpful supplement to this specialty text, which in turn is of optimal use with two complementary ANA texts: *Nursing's Social Policy Statement: The Essence of the Profession and Guide to the Code of Ethics for Nurses: Interpretation and Application*. These three books are also available as a set, ANA's *Foundation of Nursing Package*, to guide nursing practice, thinking, and decision-making. The set is proving useful as a professional reference. Caring for the Public's Health Lippincott Williams & Wilkins

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and

knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
