Ecology, Resources, Environment Oxford University Press, USA
The region of the Fourth Nile Cataract in

northern Sudan is a hitherto little researched part of the Nile valley which will soon be flooded by the rising waters of a large hydro-electric dam. The reservoir will cause the irreversible loss of the rich cultural heritage of this remote part of the Middle Nile. As an answer to this threat the National Corporation for Antiquities and Museums of the Sudan inaugurated the Merowe Dam Archaeological Salvage Project, in which numerous international missions from several European countries and the United States participate. The volume assembles 20 papers from the ?

elds of archaeology, ethnography and geography originally presented at the 2nd International Conference on the Archaeology of the 4th Nile Cataract held at Humboldt University Berlin in 2005. The contributions span a wide thematic and temporal range from general survey results and site excavation reports from different concessions to specialised articles on burial types, pottery, rock art, inscriptional material, site preservation and on the modern life of the Manasir people.

Mongolia Health System Review

Leiden University Press

A concise and easy-to-read summary of all the latest and crucial aspects of ground-penetrating radar uses and data collection, analysis, and processing for archaeological mapping and exploration

Excavations at Geleen-Janskamperveld 1990/1991 New Riders Pub

Traditional archaeological excavation methods are sometimes daunting due to political or financial complications. Other times, an improperly planned dig can destroy or entirely overlook the features or artifacts being sought. In either case, Ground-Penetrating Radar, or GPR, is an increasingly applicable technology, but one that few archaeologists truly understand. That is where this book excels. It is tailored towards an archaeological community which is for the most part apprehensive about using "high tech" instruments and feel more comfortable on their hands and knees digging in the dirt. Its abundant illustrations and easy-to-understand tables help to keep this potentially daunting subject matter accessible. It also contains more complex equations and theory so that the more technically-oriented can use

it as a reference tool.

4th International Workshop, IWDW 2005, Siena, Italy, September 15-17, 2005, Proceedings Methuen Drama

There's something in the earth deep below Elise Kavanagh's territory. A shadow is falling upon local demons to devour their flesh and harvest their souls. And it's coming for Elise next. The Union has an easy way out. They want to send Elise into hiding again with her former partner, James Faulkner. All she has to do is surrender the territory and trust that they can protect the ethereal ruins, the dark gate, and the city she's come to know as home. Greater powers have other plans for Elise and her fabled power as Godslayer—plans that mean surrendering her life and blood to the most powerful demon alive. But if she descends, there's no turning back. Once she gazes into the abyss, it will gaze back into her...and Elise will be damned forever.

This book constitutes a pioneering and unique work on Lake Victoria. It is the world's second largest fresh-water lake and supports the livelihood of more than

30 million people. Surprisingly, there has been no comprehensive book addressing its problems and potentials. Ecology, environmental pollution and resource management are some of the issues addressed by this comprehensive insight into the limitations, challenges and opportunities facing Lake Victoria. *Engineer's Field Book (Classic Reprint)* CRC Press

This book constitutes the refereed proceedings of the 4th International Workshop on Digital Watermarking Secure Data Management, IWDW 2005, held in Siena, Italy in September 2005. The 31 revised full papers presented were carefully reviewed and selected from 74 submissions. The papers are organized in topical sections on steganography and steganalysis, fingerprinting, watermarking, attacks, watermarking security, watermarking of unconventional media, channel coding and watermarking, theory, and applications.

Physical Geology Harlequin / SB Creative Ground-penetrating radar (GPR) has become one of the standard tools in the archaeologist's array of methods, but users still struggle to understand what the

images tell us. In this book—illustrated with over 200 full-color photographs—Lawrence Conyers shows how results of geophysical surveys can test ideas regarding people, history, and cultures, as well as be used to prospect for buried remains. Using 20 years of data from more than 600 GPR surveys in a wide array of settings, Conyers, one of the first archaeological specialists in GPR, provides the consumer of GPR studies with basic information on how the process works. He shows how the plots are generated, what subsurface factors influence specific profiles, how the archaeologist can help the surveyor collect optimal data, and how to translate the results into useable archaeological information.

In December 1986, U.S. EPA's Assistant Administrator for Water initiated a major study of the Agency's surface water monitoring activities. The resulting report, entitled "Surface Water Monitoring: A Framework for Change", emphasizes the restructuring of existing monitoring

programs to better address the Agency's current priorities, e.g., toxics, nonpoint source impacts, and documentation of "environmental results." The study also provides specific recommendations on effecting the necessary changes. Principal among these are: 1. To issue guidance on cost-effective approaches to problem identification and trend assessment. 2. To accelerate the development and application of promising biological monitoring techniques. In response to these recommendations, the Assessment and Watershed Protection Division developed the rapid bioassessment protocols (RBPs) designed to provide basic aquatic life data for water quality management purposes such as problem screening, site ranking, and trend monitoring, and produced a document in 1989. Although none of the protocols were meant to provide the rigor of fully comprehensive studies, each was designed to supply pertinent, cost-effective information when applied in the appropriate context. As the technical guidance for biocriteria has been developed by EPA, states have found these protocols useful as a framework for

their monitoring programs. This document was meant to have a selfcorrective process as the science advances; the implementation by state water resource agencies has contributed to refinement of the original RBPs for regional specificity. This revision reflects the advancement in bioassessment methods since 1989 and provides an updated compilation of the most cost-effective and scientifically valid approaches. The primary purpose of this document is to describe a practical technical reference for conducting cost-effective biological assessments of lotic systems. The protocols presented are not necessarily intended to replace those already in use for bioassessment nor is it intended to be used as a rigid protocol without regional modifications. Instead, they provide options for agencies or groups that wish to implement rapid biological assessment and monitoring techniques. This guidance, therefore, is intended to provide basic, cost-effective biological methods for states, tribes, and local agencies that (1) have no established bioassessment procedures, (2) are looking for alternative methodologies, or (3) may need to supplement their existing

programs (not supersede other bioassessment approaches that have already been successfully implemented).

This is a January 2019 - December 2019 Planner and organizer with an abstract art cover design in shades of blue and black. The Planner consists of: A 2019 calendar across 2 pages with the first six months of the year on one page and the second 6 months on the facing page. 108 pages with one week per view with a Monday start date - meaning that one week is

spread over 2 adjacent pages with lined spaces for Monday, Tuesday and Wednesday on one page and Thursday, Friday, Saturday and Sunday on the facing page. 52 weeks over 104 pages and extra pages for the week from 31st December, 2018 - 6th January, 2019 and again from 30th December, 2019 - 5th January, 2020. 24 pages with monthly views - each month spread over 2 adjacent pages in a grid pattern layout - large boxes for each date for notes. 5 wide ruled pages for notes, phone numbers etc. - Can be used as a diary to write down notes on day to day life. - It can be useful as Christmas and New Year gifts for family, friends, colleagues, co-workers, associates and college and school students. - Will help to maintain reminders about appointments to keep and jobs to do. - Progress can be reviewed week by week. - Can be used as a travel diary to note down the itinerary on a day to day basis. - Soft, flexible cover fits in the bag and pockets than the stiff hardcover. - Perfect for the office or home study, this is a desktop week-to-view diary - Take a look inside to see how it compares to other daily journals!

Mayim's Vegan Table Proceedings of the

Second International Conference on the Archaeology of the Fourth Nile Cataract, Berlin, August 4th - 6th, 2005

On the cusp of summer, 1986, Rowan Brockman's mother asks if he will come home to Septimus in the Western Australian Wheatbelt to help with the final harvest. Rowan's brother, the natural heir to the farm, has died, and Rowan's dad's health is failing. Although he longs to, there is no way that Rowan can refuse his mother's request as she prepares the farm for sale. This is the story of the final harvest - the story of one young man in a place he doesn't want to be, being given one last chance to make peace before the past, and those he has loved, disappear.

The Prehistory of the Netherlands S.

Chand Publishing

Globalization has created an interconnected world, but has not diminished violence and militarism. The Economics of Killing describes how the power of global elites, entrenched under globalization, has created a deadly cycle of violence. In this groundbreaking work, Vijay Mehta shows how attempts at peaceful national development are routinely blocked by Western powers. He

centers the 2008 financial crisis in US attempts to block China's model of development. He shows how Europe and the US conspire with regional dictators to prevent countries from developing advanced industries, and how this system has fed terrorism. Mehata argues that a different world is possible, based on policies of disarmament, demilitarization, and sustainable development. This original and thought-provoking book will be of great interest to anyone concerned about the consequences of endless war fueled by the West.
