 JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ

system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that "Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. " The Commission proceeded to recommend the education and training of substantial numbers of Primary Physicians who would, by assuming primary responsibility for the patient's welfare in sickness and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education. There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S. Prentice Hall

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Internet of Things-- Global Technological and Societal Trends builds on the ideas put forward by the European research Cluster on the Internet of Things Strategic Research Agenda. It presents global views and state-of-the-art results on the challenges the research, development, and deployment of Internet of Things (IoT) face at the global level. The objective of this book is to define the IoT in a global view and present the research agenda for IoT technologies by addressing the new technological developments and providing a global balanced coverage of the challenges and technical and industrial trends. Energy consumption by the data, communication, and networking devices and global CO2 emission are increasing exponentially. ICT has a dual role in this process, accounting for about two percent of global CO2 emissions and at the same the ICT, including IoT

technologies and applications that have a direct effect on lowering CO2 emissions. This increases energy efficiency, reduces power consumption, and achieves efficient waste recycling. IoT put together with the other emerging Internet developments such as Internet of Energy, Media, People, Services, and Business/Enterprises are the backbone of the digital economy and digital society and the foundation for the future knowledge based economy and innovation society. IoT developments show that we will have 16 billion connected devices by the year 2020, which will average out to six devices per person on earth. Devices like smart phones and machine to machine (M2M) or thing to thing communication will be the main drivers for further IoT development. The first direct consequence of the IoT is the generation of huge quantities of data where every physical or virtual object may have a digital twin in the cloud, which could be generating regular updates. The IoT contribution is in the increased value of information created by the number of interconnections among things and the transformation of the processed information into knowledge for the benefit of mankind and society. The IoT market is connected to industrial M2M systems, smart meters, and enabling technologies such as nanoelectronics, communications, sensors, smart phones, embedded systems, cloud computing, and software technologies that will create new products, new services, new interfaces by creating smart environments, and smart spaces with applications ranging from smart transport, cities, buildings, energy, grid, to smart health, and life. Technical topics discussed in Internet of Things-- Global Technological and Societal Trends include: * The Internet of Things: The Way Ahead * Internet of Things Strategic Research Agenda * Challenges of a Sustainable Roadmap for the Internet of Things * Technologies behind Internet of Things: From Nanoelectronics and Embedded Systems to Cloud Computing and Cognitive Systems * Machine to machine (M2M) communication and the emerging Internet of Things applications * The "Internet of Things" based on IPv6. Paving the way to Smart IPv6 Buildings * "Internet of Things - from Ubiquitous Computing to Ubiquitous Intelligence Applications" * Virtualization of network resources and Physical devices in Internet of Things applications* Validation and Interoperability challenges for IoT * Mobile devices enable IoT evolution from industrial applications to mass consumer applications * Interoperability, Standardisation and Governance in the era of Internet of Things (IoT) * Technologies, Applications, and Governance in the Internet of Things * Opportunities, Challenges for Internet of Things Technologies

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, Incidents in the Life of a Slave Girl, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all. Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications-in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion. Applications include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators.
