Bones and Joints: A Guide for Students - 6th Edition If bones provide the framework, the joints provide the flexibility by permitting movement. A joint, or articulation, is the junction between two or more bones. A joint, or articulation, is the junction between two or more bones. Musculoskeletal system: Main bones, joints & muscles | Kenhub The shapes of the articular surfaces of bones found at

a synovial joint determine the movements that occur at the joint, but play a minimal role in stabilizing the joint. Ligaments at a synovial joint prevent excessive or unwanted movements and help to stabilize the joint; the greater the number of ligaments at the joint, the greater the stability.
