REYNOLDS DANIELA

Food Security, Agricultural Policies and Economic Growth Disha Publications
 Using a political-economic approach supplemented with insights from human ecology, this volume analyzes the long-term dynamics of food security and economic growth. The book begins by discussing the nature of preindustrial food crises and the changes that have occurred since the 19th century with the ascent of technical science and the fossil fuel revolution. It explains how these changes improved living standards but that the realization of this improvement was usually dependent on government support for smallholder modernization. The author sets out how the evolution of food security in different regions has been influenced by farm policy choices and how these choices were shaped by local societal characteristics, international relations and changing configurations in metropolitan countries. Separate chapters are devoted to the interaction of this evolution with debates on food security and economic growth and with international economic policies. The final chapters highlight the new challenges for global food security that will arise as traditional sources of biomass production and the more easily extractable reserves of fossil biomass become depleted or can no longer be used. Overall, the book emphasizes the inadequacy of current explanations with regard to these challenges. It explores what is needed to ensure a sustainable future and calls for a rethinking of these issues; a necessary reflection in today's unstable global political situation.

Voyages in World History, Complete, Brief New Delhi: Indian Council for Cultural Relations

VOYAGES IN WORLD HISTORY, BRIEF EDITION, masterfully uses the theme of movement—the journeys of peoples, ideas, and goods—to help students make sense of the huge range of people, places, and events throughout history. Each chapter is framed around the story of a person who traveled within the time period and region under discussion. Students can practice being critical readers by evaluating the traveler's observations and attitudes. A primary source feature, "Movement of Ideas," helps students develop the core skill of analyzing sources by allowing them to compare multiple explanations of significant ideas. This brief text meets the needs of instructors who want a lively narrative style without sacrificing the themes and pedagogy that make world history understandable to students; it is also ideal for instructors who want to supplement a text with many primary sources.

Available in the following options: VOYAGES IN WORLD HISTORY, BRIEF EDITION, 2nd Edition (Chapters 1–32); Volume I: To 1600 (Chapters 1–16); Volume II: Since 1500 (Chapters 15–32).

Different aspects of the Mughal Empire-its power, wealth, stability, territoriality, exquisite, surreal character, and also its 'decline'-have engaged historians for several decades in a complex, contentious debate. This volume attempts to understand the divergent views and discussions that surround the withering of the empire and focuses on the different paradigms and assumptions that have shaped the interpretations on the decline of the Mughal Empire.

Science and Technology in India Routledge

Part II deals with agricultural science, alchemy, chemistry and chemical technology, mining and metallurgy military technology, textiles and manufacturing industries, mechanical technology, civil engineering, navigation and ship-building, medicine and pharmacy. Historians of Islamic science tend to limit their studies to the period up to the 16th century but, Part II of this volume also deals with the continuation of science and technology in the Ottoman Empire, India and Iran.

This textbook examines Marxism's enormous impact on the way historians approach their subject. Tackling current historiographical questions in an accessible way, the author offers a clear introduction to Marxist views of history, key Marxist historians and thinkers, and the relevance of Marxist theory and history to students' own work. This is a concise, thorough overview of an important area of historiography. The second edition incorporates significant new developments in research, including Marxist contributions to the emergence of global, maritime and transnational history; the discovery of Marx's

ecologism and the historical critique of fossil capitalism as a source of environmental disaster; a reassessment of gender oppression through social reproduction theory; and the contribution of Marxism to debates on race, Eurocentrism and whiteness.

The Geography of India Cambridge University Press

Social Science Learning in Schools: Perspective and Challenges locates the teaching and learning of social science within the larger perspective and aims of education. It emphasizes the need to take the teaching of social science beyond the confines of contemporary ideological debates, into the realm of pedagogical theory. It presents critical perspectives on curriculum design, textbook development and social science pedagogy. Discussions on pedagogy are situated in analyses of Eklayva's social science textbooks which were in use for over 15 years in government schools in Madhya Pradesh. The book explores the integral role of the teacher, importance of textbooks, and methods of social science enquiry in school teaching-learning. It interrogates integrated approaches to social science education, and notions of nationalism and identity. The book will serve as a seminal social science text for Indian elementary teacher education programmes. University departments of education, research institutions, NGOs and development organisations working in education, literacy and child development will find it an invaluable elementary education resource.

India, Modernity and the Great Divergence Oxford University Press, USA

Interest in the science, technology and medicine of India under British rule has grown in recent years and has played an ever-increasing part in the reinterpretation of modern South Asian history. Spanning the period from the establishment of East India Company rule through to Independence, David Arnold's wide-ranging and analytical survey demonstrates the importance of examining the role of science, technology and medicine in conjunction with the development of the British engagement in India and in the formation of Indian responses to western intervention. One of the first works to analyse the colonial era as a whole from the perspective of science, the book investigates the relationship between Indian and western science, the nature of science, technology and medicine under the Company, the creation of state-scientific services, 'imperial science' and the rise of an Indian scientific community, the impact of scientific and medical research and the dilemmas of nationalist science.

This book addresses the continuing controversy over the potential impact of genetically modified (GM) crops in developing countries. Supporters of the technology claim it offers one of the best hopes for increasing agricultural production and reducing rural poverty, while opponents see it as an untested intervention that will bring corporate control of peasant farming. The book examines the issues by reviewing the experience of GM, insect-resistant cotton, the most widely grown GM crop in developing countries. The book begins with an introduction to agricultural biotechnology, a brief examination of the history of cotton production technology (and the institutions required to support that technology), and a thorough review of the literature on the agronomic performance of GM cotton. It then provides a review of the economic and institutional outcomes of GM cotton during the first decade of its use. The core of the book is four country case studies based on original fieldwork in the principal developing countries growing GM cotton (China, India, South Africa and Colombia). The book concludes with a summary of the experience to date and implications for the future of GM crops in developing countries. This review challenges those who have predicted technological failure by describing instances in which GM cotton has proven useful and has been enthusiastically taken up by smallholders. But it also challenges those who claim that biotechnology can take the lead in agricultural development by examining the precarious institutional basis on which these hopes rest in most countries. The analysis shows how biotechnology's potential contribution to agricultural development must be seen as a part of (and often secondary to) more fundamental policy change. The book should be of interest to a wide audience concerned with agricultural development. This would include academics in the social and agricultural sciences, donor agencies and NGOs.
