The Man who Fell in Love with the Moon Baen Publishing Enterprises

A Behind-the-Scenes Look At NASA's incredible Journey to the Moon Space journalist and insider Nancy Atkinson weaves together the riveting story of NASA's mission to complete "the greatest adventure on which humankind ever embarked." This incredible account is a keepsake celebrating some of the most important and dramatic events in modern history. Told through over 60 personal interviews and oral histories, as well as personal photographs, this tribute to the men and women who made the Apollo 11 mission a reality chronicles the highs and lows that accompanied the race to the Moon: the devastating flash fire that killed the crew of Apollo 1; the awe of those who saw their years-in-the-making contributions to space exploration blast off from Cape Canaveral; the knuckle-biting descent of Apollo 11 to the lunar surface; a near-catastrophic event on the crew's flight home; the infectious excitement and jubilation across the world

after the astronauts returned safely to Earth. These little-known stories of the dedicated engineers, mathematicians and scientists in the 1960s reveal the "hows" of the Apollo missions and bring to life the wonder and excitement of humanity's first steps on the Moon.

The Moon Maid Chronicle Books

An intimate portrait of the Earth's closest neighbor--the Moon--that explores the history and future of humankind's relationship with it Every generation has looked towards the heavens and wondered at the beauty of the Moon. Fifty years ago, a few Americans became the first to do the reverse--and shared with Earth-bound audiences the view of their own planet hanging in the sky instead. Recently, the connection has been discovered to be even closer: a fragment of the Earth's surface was found embedded in a rock brought back from the Moon. And astronauts are preparing to return to the surface of the Moon after a half-century hiatus--this time to the dark side. Oliver Morton explores how the ways we have looked at the Moon have shaped our perceptions of the Earth: from the controversies of early astronomers such as van Eyck and Galileo, to the Cold War space race, to the potential use of the Moon as a stepping stone for

further space exploration. Advanced technologies, new ambitions, and old dreams mean that men, women, and robots now seem certain to return to the Moon. For some, it is a future on which humankind has turned its back for too long. For others, an adventure yet to begin.

The Man Who Remembered the Moon Simon and Schuster
The story of the lunar landing and the events that led up to it, told in text and visually stunning 3-D images. July 2019 marks the fiftieth anniversary of Apollo 11's epochal lunar landing, when Neil Armstrong and Buzz Aldrin walked on the surface of the moon. This visually rich book offers a new perspective on that historic accomplishment, telling the story of the lunar landing and the events that led up to it with text and 3-D images. A 3D viewer, designed by astrophysicist (and lead guitarist with the rock group Queen) Brian May is included with the book. Mission Moon 3-D offers unique access to the Apollo astronauts and what they saw. It tells the story of the US-Soviet space race, from Sputnik and the space dog Laika to Mercury, Gemini, and Apollo. In 1961, President John F. Kennedy declared that America would put a man on the moon by the end of the decade. On July 20, 1969, Neil Armstrong guided the Eagle to a safe landing on the edge of the moon's Sea of Tranquility. President Richard Nixon told the astronauts, and the nation, that it was "the greatest week in the history of the world since the Creation." Mission Moon 3-D recounts all this and more in memorable and visually stunning fashion.

Who Owns the Moon? Anchor

While the Moon was once thought to hold the key to space exploration, in recent decades, the U.S. has largely turned its sights toward Mars and other celestial bodies instead. In *The Value of the Moon*, lunar scientist Paul Spudis argues that the U.S. can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy. Spudis explores three reasons for returning to the Moon: it is close, it is interesting, and it is useful. The proximity of the Moon not only allows for frequent launches, but also control of any machinery we place there. It is interesting because recorded deep on its surface and in its craters is the preserved history of the moon, the sun, and indeed the entire galaxy. And finally, the moon is useful because it is rich with materials and energy. The moon, Spudis argues, is a logical base for further space exploration and even a possible future home for us all. Throughout his work, Spudis incorporates details about man's fascination with the moon and its place in our shared history. He also explores its religious, cultural, and scientific resonance and assesses its role in the future of spaceflight and our national security and prosperity.

The Man Who Went to the Far Side of the Moon Macmillan + ORM
Former NASA Astronaut Harrison Schmitt advocates a private, investor-based approach to returning humans to the Moon—to extract Helium 3 for energy production, to use the Moon as a platform for science and manufacturing, and to establish permanent human colonies there in a kind of stepping stone community on the way to deeper space. With governments playing a supporting role—just as they have in the development of modern commercial aeronautics and agricultural production—Schmitt believes that a fundamentally private enterprise is the only type of organization capable of sustaining such an effort and, eventually, even making it pay off.

The Value of the Moon ABRAMS

"Explores and analyzes the historical context and significance of Neil Armstrong's iconic photograph of Buzz Aldrin"--

Mission Moon 3-D Hachette UK

"It's not just Murakami but also the shadow of Borges that hovers over this mesmerizing book... [and] one may detect a slight bow

to the American macabre of E.A. Poe. Ogawa stands on the shoulders of giants, as another saying goes. But this collection may linger in your mind -- it does in mine -- as a delicious, perplexing, absorbing and somehow singular experience." -- Alan Cheuse, NPR
Sinister forces collide---and unite a host of desperate characters---in this eerie cycle of interwoven tales from Yoko Ogawa, the critically acclaimed author of *The Housekeeper and the Professor*. An aspiring writer moves into a new apartment and discovers that her landlady has murdered her husband. Elsewhere, an accomplished surgeon is approached by a cabaret singer, whose beautiful appearance belies the grotesque condition of her heart. And while the surgeon's jealous lover vows to kill him, a violent envy also stirs in the soul of a lonely craftsman. Desire meets with impulse and erupts, attracting the attention of the surgeon's neighbor---who is drawn to a decaying residence that is now home to instruments of human torture. Murderers and mourners, mothers and children, lovers and innocent bystanders---their fates converge in an ominous and darkly beautiful web. Yoko Ogawa's *Revenge* is a master class in the macabre that will haunt you to the last page. An NPR Best Book of 2013

Sex on the Moon Watkins Media Limited

First man on the Moon Neil Armstrong reveals the adventure of the first Moon landing, and how the Earth and the Moon came to be, in this unique non-fiction picture book. A young boy sits up in bed and gazes at the distant Moon through his window. He wonders if, one day, a human will stand on its surface and look back at the Earth. But Earth is already being studied from the Moon. An all-seeing Moon rock of almost impossible age, called Bok, has been looking down at our blue and green planet for millennia. Geologists - people who study rocks - have a saying: 'Rocks remember'. During his time, Bok has witnessed some truly wondrous things. Created in the Earth-shattering collision 4.5 billion years ago that led to the formation of the Moon, he has seen stars burst into being and meteors streak through the solar system. He has seen his own Moon surface be transformed with craters, and he has watched a fiery, volcanic planet transform into the haven we know today - as mountain ranges rose up, oceans appeared and dinosaurs roamed the Earth. And he found himself rudely awoken one early lunar morning by a strange creature picking him up and throwing him into a box. That is how Bok and Neil Armstrong first met, and this is their (true) story.

The First Men Who Went to the Moon Praeger

Award-winning former investigative reporter Basil Hero chronicles the life lessons humanity can learn from the twelve remaining Apollo astronauts who went to the Moon. In rare in-depth interviews, the twelve remaining lunar explorers, for the first time, talk at length about the real right stuff; the true source of courage, leadership, and the quiet patriotism that it took to risk their lives going to the moon. Hero begins each chapter with key life lessons that readers can gain from these honorable men whom he calls the Eagles. He describes how they mastered their emotions and learned to conquer their fears through techniques that can be used from the classroom to the boardroom. More importantly their voyages to the Moon led them to the most incredible discovery of all: our home planet and its precious place in the universe. They fear for Earth's future and offer sensible solutions to its mounting crises and the path to future space exploration. In *The Mission Of A Lifetime*, the Eagles share their wisdom and urge us to reframe our view of Earth to theirs: no identifiable nations, borders, or races; just Earthlings working together as a collective civilization.

The Astronaut Who Painted the Moon: The True Story of Alan Bean Smithsonian Institution

"The authoritative masterpiece" (L. A. Times) on the Apollo space

program and NASA's journey to the moon This acclaimed portrait of heroism and ingenuity captures a watershed moment in human history. The astronauts themselves have called it the definitive account of their missions. On the night of July 20, 1969, our world changed forever when Neil Armstrong and Buzz Aldrin walked on the moon. Based on in-depth interviews with twenty-three of the twenty-four moon voyagers, as well as those who struggled to get the program moving, *A Man on the Moon* conveys every aspect of the Apollo missions with breathtaking immediacy and stunning detail. *A Man on the Moon* is also the basis for the acclaimed miniseries produced by Tom Hanks, *From the Earth to the Moon*, now airing and streaming again on HBO in celebration of the 50th anniversary of Apollo 11.

The Man Who Sold the Moon and Orphans of the Sky

Health Research Books

"When the moon disappears, Daniel Hale is shocked to find that he's the only person who remembers it. He is quickly committed. As he struggles to comprehend what might have happened to the moon - and to himself - only his doctor, the tenacious Marvin Pallister, holds out hope that Daniel might be cured of his delusion - now dubbed Hale-Pallister's Lunacy."--Publisher.

Marketing the Moon Phaidon Press

A biography of the astronaut, Michael Collins, who circled the moon in the Apollo 12 space capsule while his colleagues Neil Armstrong and Buzz Aldrin landed the lunar module and walked on the moon.

We Never Went to the Moon MIT Press

In spring 1961 James E. Webb, a North Carolina farm boy turned Washington insider, took charge of the grandest exploration project ever known: America's bid for the Moon. He persuaded JFK to support him and gained control of 5 per cent of the US federal budget. Webb's NASA controlled half a million workers across America as they built new machines, launch pads and control centres. But when a spacecraft caught fire in 1967, killing three astronauts, the press exposed a series of failures and the profiteering of Webb's business partners. To protect NASA's future, Webb took the heat for the corruption and deaths and enabled his colleagues to land on the Moon by the end of the decade. America had won the Space Race but the name of the man who made it possible was wiped from history. *The Man Who Ran the Moon* reveals the secret history of Project Apollo and the true cost of America's victory in Space.

Sevener University of Arizona Press

JFK issued the historic moon landing challenge. These are the stories of the visionaries who helped America complete his vision with the first lunar landing fifty years ago. *A Companion Book to the AMERICAN EXPERIENCE®* Film on PBS® Going in depth to explore their stories beyond the PBS series, writer/producer Robert Stone—called "one of our most important documentary filmmakers" by *Entertainment Weekly*—brings these important figures to brilliant life. In 1961, President John F. Kennedy proposed the nation spend twenty billion dollars to land a man on the Moon before the end of the decade. Based on eyewitness accounts and newly discovered archival material, *Chasing the Moon* reveals for the first time the unknown stories of the fascinating individuals whose imaginative work across several decades culminated in America's momentous achievement. More than a story of engineers and astronauts, the moon landing—now celebrating its fiftieth anniversary—grew out of the dreams of science fiction writers, filmmakers, military geniuses, and rule-breaking scientists. They include • Science fiction author Arthur C. Clarke, whose writing inspired some of the key players in the Moon race. A scientific paper he wrote in his twenties led to the U.S. beating Russia in one area of space: communications satellites. • Wernher von Braun, the former Nazi military genius

who oversaw Hitler's rocket weapons program. After working on ballistic missiles for the U.S. Army, he was recruited by NASA to manage the creation of the Saturn V moon rocket. • Astronaut Frank Borman, commander of the first mission to circumnavigate the Moon, whose powerful testimony before Congress in 1967 decisively saved the U.S. lunar program from being cancelled. • Poppy Northcutt, a young mathematician who was the first woman to work in Mission Control. Her media exposure as a unique presence in this all-male world allowed her the freedom to stand up for equal rights for women and minorities. • Edward Dwight, an African American astronaut candidate, recruited at the urging of the Kennedy White House to further the administration's civil rights agenda—but not everyone welcomed his inclusion. Setting these key players in the political, social, and cultural climate of the time, and including captivating photographs throughout, *Chasing the Moon* focuses on the science and the history, but most important, the extraordinary individuals behind what was undoubtedly the greatest human achievement of the twentieth century.

Man in the Moon Page Street Publishing

From the Apollo 17 commander and NASA veteran, "an exciting, insider's take on what it was like to become one of the first humans in space" (*Publishers Weekly*). Eugene Cernan was a unique American who came of age as an astronaut during the most exciting and dangerous decade of space flight. His career spanned the entire Gemini and Apollo programs, from being the first person to spacewalk all the way around our world to the moment when he left man's last footprint on the moon as commander of Apollo 17. Between those two historic events lay more adventures than an ordinary person could imagine as Cernan repeatedly put his life, his family, and everything he held dear on the altar of an obsessive desire. Written with New York Times bestselling author Don Davis, *The Last Man on the Moon* is the astronaut story never before told—about the fear, love, and sacrifice demanded of the few who dare to reach beyond the heavens. "Thrilling highlights . . . a book not just about space flight but also about the often-brutal competition that went on between the US and the Soviet Union." —*Washington Times* "A fascinating book." —*Charlotte Observer*

Revenge Dumagrad

"China convinces the world that America never landed on the moon. Ex-astronaut Peter Novak must prove we were first, for his father, for his country and for the future."--Dust cover.

Eight Years to the Moon Picador

Science fiction-roman.

The Book of Bok Macmillan + ORM

The unfinished sci-fi masterpiece by the author of *Stranger in a Strange Land*—completed by the Hugo Award-winning author of *The Stardance Trilogy*. Joel Johnston has found the love of his life in Jinny Hamilton. Life would be perfect if only he earned enough money to support a family. But now that Jinny knows his love is true, she reveals an incredible secret: she is really Jinny Conrad, granddaughter of Richard Conrad, the wealthiest man in the solar system. And now that Joel proven his love for Jinny, her family has a plan for him. Joel is to be groomed for a place in the vast Conrad empire and sire a dynasty to carry on the family business. Most men would jump at the opportunity. But to Jinny's surprise, and even his own, Joel turns down her generous offer and sets off on the mother of all benders. When he wakes up on a colony ship heading into space, he decides it's time to forget Jinny and make a life among the stars. But his plans—and the plans of billions of others—are shattered by a cosmic cataclysm so devastating it will take all of humanity's strength and ingenuity just to survive. When an outline for *Variable Star* was found among Robert A. Heinlein's papers, *Spider Robinson* was commissioned to

complete the novel. The result is a thrilling new work of science fiction from two of the genre's greatest minds.

The Man who Sold the Moon Random House Books for Young Readers

From the #1 New York Times bestselling author of *Anathem*, *Reamde*, and *Cryptonomicon* comes an exciting and thought-provoking science fiction epic—a grand story of annihilation and survival spanning five thousand years. What would happen if the world were ending? A catastrophic event renders the earth a ticking time bomb. In a feverish race against the inevitable, nations around the globe band together to devise an ambitious plan to ensure the survival of humanity far beyond our atmosphere, in outer space. But the complexities and unpredictability of human nature coupled with unforeseen challenges and dangers threaten the intrepid pioneers, until only a handful of survivors remain . . . Five thousand years later, their progeny—seven distinct races now three billion strong—embark on yet another audacious journey into the unknown . . . to an alien world utterly transformed by cataclysm and time: Earth. A writer of dazzling genius and imaginative vision, Neal Stephenson combines science, philosophy, technology, psychology, and literature in a magnificent work of speculative fiction that offers a portrait of a future that is both extraordinary and eerily recognizable. As he did in *Anathem*, *Cryptonomicon*, the *Baroque Cycle*, and *Reamde*, Stephenson explores some of our biggest ideas and perplexing challenges in a breathtaking saga that is daring, engrossing, and altogether brilliant.

The Man Who Sold the Moon Lulu.com

When Faustin, the old Acoma, is given his first television set, he considers it a technical wonder, a box full of mystery. What he sees on its screen that first day, however, is even more startling than the television itself: men have landed on the moon. Can this be real? For Simon Ortiz, Faustin's reaction proves that tales of ordinary occurrences can truly touch the heart. "For me," he observes, "there's never been a conscious moment without story." Best known for his poetry, Ortiz also has authored 26 short stories that have won the hearts of readers through the years. *Men on the Moon* brings these stories together—stories filled with memorable characters, written with love by a keen observer and interpreter of his people's community and culture. True to Native American tradition, these tales possess the immediacy—and intimacy—of stories conveyed orally. They are drawn from Ortiz's Acoma Pueblo experience but focus on situations common to Native people, whether living on the land or in cities, and on the issues that affect their lives. We meet Jimmo, a young boy learning that his father is being hunted for murder, and Kaiser, the draft refuser who always wears the suit he was given when he left prison. We also meet some curious Anglos: radicals supporting Indian causes, scholars studying Indian ways, and San Francisco hippies who want to become Indians too. Whether telling of migrants working potato fields in Idaho and pining for their Arizona home or of a father teaching his son to fly a kite, Ortiz takes readers to the heart of storytelling. *Men on the Moon* shows that stories told by a poet especially resound with beauty and depth.
