*Law Q&A Revision and Study Guide* John  
Wiley and Sons

In this textbook designed for courses on aviation labor relations, the authors-experts with many years of experience in these sectors-examine and evaluate the labor process for all aspects of the aviation and aerospace industries, including aerospace manufacturing,

airlines, general aviation, federal and state administrative agencies, and public airports. Divided into three parts-Public Policy and Labor Law; Principles, Practices and Procedures in Collective Bargaining and Dispute Resolution; and the Changing Labor Relations Environment-the book provides an overview of the industries and the development of US labor law and policy, then explores the statutory, regulatory, and case laws applicable to each industry segment before concluding with

an examination of current and developing issues and trends. The authors present the evolution of aviation and aerospace labor laws, going as far back as the early nineteenth century to lay the historical foundation, and cover the development and main features of the principal statutes governing labor relations in the United States today, the Railway Labor Act, the National Labor Relations Act, and the Civil Service Reform Act. They also investigate the growth of the industries and their impact on labor relations, as well as the current issues and challenges facing management and labor in each segment of this dynamic, sometimes volatile, business and their implications for collective bargaining. Twenty case studies not only illuminate practical

applications of such fundamental concepts as unfair labor practices and unions' duty of fair representation but also enliven the subject, preparing the reader to use the concepts in real-world decision making. A study guide with review questions, online assignments, supplemental readings, and exercises is available for students. For those teachers using the textbook in their courses, there is an instructor's manual with additional resources for developing courses in the classroom, online, or by blended learning, as well as a variety of assignments and materials to enhance and vary the mock negotiation exercise. A revision and expansion of Robert W. Kaps's *Air Transport Labor Relations*, this outstanding new volume provides students and teachers with valuable

information and perspectives on industries that are highly dependent on technologically skilled labor. *Labor Relations in the Aviation and Aerospace Industries* offers a sweeping and thorough treatment of labor relations, public policy, law, and practice and is the definitive work on the labor process in the aviation and aerospace sectors.

Educational Publishers

This book contributes to our knowledge

of the social and economic implications of the adoption of new technology, on the basis of a detailed study of the process by which BL cars, in financial crisis in 1975 and with a history of several industrial relations problems, launched the first of its new model range in 1980. It draws on substantial data from the company itself and describes the emergence of a new management strategy which emphasised the right to manage on the shopfloor, and the consequences of this for trade union organisation, the role of shop stewards, and the organisation of work. It emphasises the importance of labour relations reform in securing the success of the new model, and the relationships between innovation decisions and changes on the shopfloor. It then

discusses the wider implications of, and the theoretical and policy conclusions to be drawn from, the development of such labour relations strategies.

**Canadian Master Labour Guide** Basic Guide to the National Labor Relations Act It cannot be denied that in recent decades, for many if not most people, work has become unstable and insecure, with serious risk and few benefits for workers. As this reality spills over into political and social life, it is crucial to

interrogate the transformations affecting employment relations, shape research agendas, and influence the policies of national and international institutions. This single volume brings together thirty-nine scholars (both academics and experienced industrial relations actors) in the fields of employment relations and labour law in a forthright discussion of new approaches, theories, and methods aimed at ameliorating the world of work. Focusing on why and how work is changing, how collective actors deal with it, and the future of work from different disciplinary angles and at an international level, the contributors describe and analyse such issues and topics as the following: new forms of social protection and representation; differences in the power relations of

workers and political dynamics; balancing protection of workers' dignity and promotion of productivity; intersection of information technology and workplace regulation; how the gig economy undermines legal protections; role of professional and trade associations; workplace conflict management; lay judges in labour courts; undeclared work in the informal sector of the labour market; work incapacity and disability; (in)coherence of the work-related case law of the European Court of Justice; and business restructurings. Derived from a major conference held in Leuven in September 2018, the book offers an in-depth understanding of the changing world of work, its main transformations, and the challenges posed to classical

employment relations theories and methods as well as to labour law. With its wide range of insights, analysis, and reflection, this unique contribution to the study of industrial relations offers an authoritative reference guide to scholars, policymakers, trade unions and business associations, human resources professionals, and practitioners who need to deal with the future of work challenges.

Oxford University Press

This study aims to elucidate the general legal rules and principles of the law of unfair dismissal, as well as offering an account of the social, political, and philosophical context in which the idea of protection from "unfair dismissal at work" has developed and currently operates.
