Since mathematical principles have remained the same all throughout the world for centuries, Mathematics has been considered by many the “universal language of numbers”. For some, Mathematics causes anxiety or fear because it seems difficult to understand. One of the objectives of this eBook is to make the material more visually,

technologically and multiculturally attractive, with the aid of videos, pictures, games, animations and interactive exercises so that Mathematics can become more interesting and accessible for today’s worldwide students since “evidence is mounting to support technology advocates’ claims that 21st-century information and communication tools, as well as more traditional computer-assisted instructional applications, can positively influence student learning processes and outcomes (Cradler, 2002)”. The role of mathematics in our modern world is crucial for today’s global communication and for a multitude of scientific and technological applications and advances.
