The story of men who are hurting—and hurting America by their absence Man Out describes the millions of men on the sidelines of life in the United States. Many of them have been pushed out of the mainstream because of an economy and society where the odds are stacked against them; others have chosen to be on the outskirts of twenty-first-century America. These men are disconnected from work, personal relationships, family and children, and civic and community life. They may be angry at government, employers, women, and "the system" in general—and millions of them have done time in prison and have cast aside many social norms. Sadly, too many of these men are unsure what it means to be a man in contemporary society. Wives or partners reject them; children are estranged from them; and family, friends, and neighbors are embarrassed by

them. Many have disappeared into a netherworld of drugs, alcohol, poor health, loneliness, misogyny, economic insecurity, online gaming, pornography, other off-the-grid corners of the internet, and a fantasy world of starting their own business or even writing the Great American novel. Most of the men described in this book are poorly educated, with low incomes and often with very few prospects for rewarding employment. They are also disproportionately found among millennials, those over 50, and African American men. Increasingly, however, these lost men are discovered even in tony suburbs and throughout the nation. It is a myth that men on the outer corners of society are only lower-middle-class white men dislocated by technology and globalization. Unlike those who primarily blame an unjust economy, government policies, or a culture sanctioning "laziness," Man Out explores the complex interplay between economics and culture. It rejects the politically charged dichotomy of seeing such men as either victims or culprits. These men are hurting, and in turn they are hurting families and hurting America. It is essential to address their problems. Man Out draws on a wide range of data and existing research as well as interviews with several hundred men, women, and a wide variety of economists and other social

scientists, social service providers and physicians, and with employers, through a national online survey and in-depth fieldwork in several communities.

This book offers a new interpretation of the life and legacy of the Indian reformer and intellectual, Ishvarchandra Vidyasagar (1820–91). Drawing upon autobiography, biography, secondary criticism and a range of Vidyasagar's original writings in Bengali, the book interrogates the role of history, memory and controversy, and emphasises the key challenge of pinning down the identity of an enigmatic and multi-faceted figure. By examining lesser-known works of Vidyasagar (including several pseudonymous and posthumous works) alongside the evidence of his public career, the author calls attention to the colonial transformation of intellectual and social life, the nature of life writing, the limits of standard biographies and the problem of modern Indian identity as such. Based on decades of research and an original perspective, this book will be especially useful to scholars of modern Indian history, biographical studies, comparative literature and those interested in Bengal.

Loriliai Biernacki and Philip Clayton offer a collection of groundbreaking new essays on panentheism. Not to be confused with pantheism - the ancient Greek notion that God is everywhere, an animistic force in rocks and trees - panentheism suggests that God is both in the world, immanent, and also beyond the confines of mere matter, transcendent. One of the fundamental premises in this book is that panentheism, despite being unlabeled until the nineteenth century, is not merely a modern Western invention. The contributors examine a number of the world's established and ancient religious traditions - Christianity, Hinduism, Buddhism, Judaism, among others - to draw out the panentheistic dimensions of these traditions and the possibilities they suggest. Panentheism is not simply an esoteric, potentially heretical, and habitually mystical vision of the world's great religious pasts; it persists today with a proper name and a lineage. As this volume demonstrates, a new paradigm is emerging in modern panentheism, one eminently suited to a world view that can no longer shake off the realities of our evolving species and our evolving technological world. Panentheism's enticingly heretical vision of the relationship between the divine and matter has historically been denied a serious place in scholarship. As Panentheism across the World's Traditions shows, the dynamism between matter and spirit that panentheism offers has had a profound influence in the modern world.

How are the pleasures of making things work turned into processes of domination? Are there links between gender and military institutions? Does eroticism have something to do with engineering? In this book, first published in 1989, Sally Hacker explores the answers to these and other provocative questions about our attitudes toward work and leisure. Drawing from her broad experience as a sociologist, feminist and student of engineering, Hacker helps us to understand the impact of technology on our society and how feminist principles can be used to make work life more egalitarian and more humane. In the first part of the book, the author examines various examples of the masculinization of power, ranging from military institutions to the mechanisation of farm labour, computer technology and affirmative action. In the second part, Hacker presents the results of her research on Mondragon, the world's largest cooperative workplace, located in Spain. Hacker reaches surprising conclusions about gender and technology at Mondragon, where, in spite of the community's egalitarian philosophy, gender inequality was as pervasive as in capitalist and socialist systems.

*Culture of Encounters* documents the fascinating exchange between the Persian-speaking Islamic elite of the Mughal Empire and traditional Sanskrit scholars, which engendered a dynamic idea of Mughal rule essential to the empire's survival. This history begins with the invitation of Brahman and Jain intellectuals to King Akbar's court in the 1560s, then details the numerous Mughal-backed texts they and their Mughal interlocutors produced under emperors Akbar, Jahangir (1605-1627), and Shah Jahan (1628-1658). Many works, including Sanskrit epics and historical texts, were translated into Persian, elevating the political position of Brahmans and Jains and cultivating a voracious appetite for Indian writings throughout the Mughal world. The first book to read these Sanskrit and Persian works in tandem, *Culture of Encounters* recasts the Mughal Empire as a polyglot polity that collaborated with its Indian subjects to envision its sovereignty. The work also reframes the development of Brahman and Jain communities under Mughal rule, which coalesced around carefully selected, politically salient memories of imperial interaction. Along with its groundbreaking findings, *Culture of Encounters* certifies the critical role of the sociology of empire in building the Mughal polity, which came to irrevocably shape the literary and ruling cultures of early modern India.

*Return of the Swastika* presents a collection of essays by the Belgian historian and Indologist Koenraad Elst, who is renowned for his writings on Indian history and Hindu nationalism. The subjects of these essays are manifold, ranging over issues pertaining to the Hindu Right, communitarianism, the European New Right, immigration from Islamic countries, fascism both historical and contemporary, and European neo-paganism. Several of the essays also discuss the alleged connections between Hinduism and the more esoteric and pagan-oriented elements of Nazism, including a critique of the neo-Nazi mystic Savitri Devi, who attempted to depict Hitler as an avatar of the Hindu god Vishnu. The running theme through all of these essays is Elst's exploration of how ideas and symbols are misrepresented by their opponents and those who seek to alter their meanings for their own purposes, and an insistence on understanding things as they

are rather than through their representation by others. For Elst, the Nazi appropriation of the swastika, one of the most ancient symbols of human civilisation and a sacred sign of Hinduism, and its subsequent demonisation by anti-fascists in the West is a case in point. The answer is not to ban the swastika, and thus cede the right to define it to those who misuse it, but rather to insist on its actual meaning, allowing it to be reborn and to flourish freely once again.

'Shourie has the anecdotal reasoning of Nirad Chaudhuri married to the writing style of Robert Ludlum. Both are in ample evidence in this book.' - India Today In this incisive commentary, Arun Shourie documents the ways in which our history textbooks have been doctored by leftist historians. Thoroughly researched and riveting, this study brings to light the techniques and frauds that a cabal of some of our best-known academicians has used to promote themselves, and to acquire control over institutions. And then to put these supposedly academic institutions to use. Shourie shows how, in the process, this cabal has perverted India's historical narrative, and thereby vitiated the country's public discourse. Two new chapters bring to light recent developments in the field: how, with their holy scriptures having been repudiated in their holy cities, these 'historians' strive to retain their perches by dominating niche domains; how these efforts are bound to fail; but how their trajectory holds vital lessons for those who seek to replace them. A must read for every Indian who has an interest in the country's history and a stake in its future.

In this witty and provocative study of democracy and its critics, Charles Willard debunks liberalism, arguing that its exaggerated ideals of authenticity, unity, and community have deflected attention from the pervasive incompetence of "the rule of experts." He proposes a ground of communication that emphasizes common interests rather than narrow disputes. The problem of "unity" and the public sphere has driven a wedge between libertarians and communitarians. To mediate this conflict, Willard advocates a shift from the discourse of liberalism to that of epistemics. As a means of organizing the ebb and flow of consensus, epistemics regards democracy as a family of knowledge problems—as ways of managing discourse across differences and protecting multiple views. Building a bridge between warring peoples and warring paradigms, this book also reminds those who presume to instruct government that they are obliged to enlighten it, and that to do so requires an enlightened public discourse.

History helps us understand change, provides clues to our own identity, and hones our moral sense. But history is not a stand-alone discipline. Indeed, its own history is incomplete without recognition of its debt to its companions in the humane and social sciences. In *Clio among the Muses*, noted historiographer Peter Charles Hoffer relates the story of this remarkable collaboration. Hoffer traces history's complicated partnership with its coordinate disciplines of religion, philosophy, the social sciences, literature, biography, policy studies, and law. As in ancient days, when *Clio* was preeminent among the other eight muses, so today, the author argues that history can and should claim pride of place in the study of past human action and thought. Intimate and irreverent at times, *Clio among the Muses* synthesizes a remarkable array of information. Clear and concise in its review of the companionship between history and its coordinate disciplines, fair-minded in its assessment of the contributions of history to other disciplines and these disciplines' contributions to history, *Clio among the Muses* will capture the attention of everyone who cares about the study of history. For as the author demonstrates, the study of history is something unique, ennobling, and necessary. One can live without religion, philosophy and the rest. One cannot exist without history. Rigorously documented throughout, the book offers a unique perspective on the craft of history.

A New Rhetoric for Modern Democracy Eminent Historians Their Technology, Their Line, Their Fraud Annually during the months of autumn, Bengal hosts three interlinked festivals to honor its most important goddesses: Durga, Kali, and Jagaddhatri. While each of these deities possesses a distinct iconography, myth, and character, they are all martial. Durga, Kali, and Jagaddhatri often demand

blood sacrifice as part of their worship and offer material and spiritual benefits to their votaries. Richly represented in straw, clay, paint, and decoration, they are similarly displayed in elaborately festooned temples, thronged by thousands of admirers. The first book to recount the history of these festivals and their revelry, rivalry, and nostalgic power, this volume marks an unprecedented achievement in the mapping of a major public event. Rachel Fell McDermott describes the festivals' origins and growth under British rule. She identifies their iconographic conventions and carnivalesque qualities and their relationship to the fierce, Tantric sides of ritual practice. McDermott confronts controversies over the tradition of blood sacrifice and the status-seekers who compete for symbolic capital. Expanding her narrative, she takes readers beyond Bengal's borders to trace the transformation of the goddesses and their festivals across the world. McDermott's work underscores the role of holidays in cultural memory, specifically the Bengali evocation of an ideal, culturally rich past. Under the thrall of the goddess, the social, political, economic, and religious identity of Bengalis takes shape.

Tracing the emergence of the domestic kitchen from the 17th to the middle of the 19th century, Sara Pennell explores how the English kitchen became a space of specialised activity, sociability and strife. Drawing upon texts, images, surviving structures and objects, *The Birth of the English Kitchen, 1600-1850* opens up the early modern English kitchen as an important historical site in the construction of domestic relations between husband and wife, masters, mistresses and servants and householders and outsiders; and as a crucial resource in contemporary heritage landscapes.

What was so special about Muhammad that caused people to follow him, obey him, and trust him when he declared he was a prophet? Bharat Singh, a retired professor, covers the prophet's extraordinary achievements in this academic work. He examines how in a short period, from the time Muhammad became a prophet to his death, he successfully converted most Arabs and many others to Islam. At the same time, he also established an Arab kingdom and developed a religious doctrine based on Allah's messages and his examples, followed by about two billion Muslims today. In simple language, the author answers questions such as: • What are the doctrines, beliefs, and rituals of Islam? • What is the meaning behind the traditions and practices of Muslims? • How does the Quran shape behavior in daily life, social customs, gender issues, marriage, divorce, legal and illegal sexual relationships, and more? • Why Muslims put faith in the divinely inspired judicial system of sharia instead of laws formed by humans. Knowing the immense curiosity in the west of the violent acts carried by some Muslim groups claiming their actions as jihad sanctioned under Islam, Dr. Singh reviews jihad's doctrine and history. He also devotes a chapter to the jihad agenda of around last hundred years and prominent terrorist organizations like Muslim Brotherhood, Hamas, Al-Qaida, ISIS, Taliban, and Hezbollah.

**Revisiting the Educational Heritage of India** Columbia University Press

Long before the first European universities appeared, India already had multi-disciplinary centers of learning that fuelled a knowledge revolution around the world. This book fills a dire need to chronicle the great educational heritage of India. It describes a unique ecosystem which ensured that Gurus and Acharyas handed the lamp of learning to generations of students. As the author puts it, "When swords quenched their thirst and famine ravaged the lands, Indians still held on to their truth that there was nothing more purifying than knowledge." She has collated information from oral history, local lore, travelogs, surviving literature, inscriptions, salvaged manuscripts, and accounts of scholars and laity. Historically, the book covers a vast time span from ancient India's traditions to the deliberate destruction of its heritage. It also outlines steps that can be taken today to incorporate the most relevant aspects of ancient learning systems into the current structure of school and university education.

Philip Blosser and Thomas Nenon The essays in the volume were assembled in honor of Lester Embree, who celebrated his 70th birthday on January 9, 2008. A preview of this volume was presented to Professor Embree at a reception sponsored by the Center for Advanced Research in Phenomenology that was held in his honor at the 2008 meeting of the Husserl Circle at Marquette University in Milwaukee, Wisconsin. The title *Advancing Phenomenology* is purposely ambiguous. On the one hand, these essays document the progress that phenomenology as an ongoing and vibrant movement has made in the period of over a century since its inception. They illustrate the advance of phenomenology both in terms of the range of topics represented in this volume and in terms of the disciplinary and geographical diversity of the scholars who have contributed to it. The topics range from scholarly appropriations of past achievements in phenomenology, to concrete phenomenological investigations into ethics, gender, and environmental philosophy, as well as phenomenological reflections on the foundations of disciplines outside philosophy such as psychology, history, the social sciences, and archeology. The contributors come both from

philosophy departments and from a number of disciplines outside of philosophy such as sociology, psychology, and archeology; and they come from all around the world – from North America, from Western and Eastern Europe, from Latin America, and from several different countries in Asia.

These essays represent a critique of the disciplinary practices of history. They examine the historian's practices and assumptions, being mainly concerned with finding a set of practices of history-writing that are both truthful and ethical. They are united by the desire to find a way out of the self-constructed cage of scientific history that has made historians wary of the popular.
