This volume is a compilation of carefully selected questions at the PhD qualifying exam level, including many actual questions from Columbia University, University of Chicago, MIT, State University of New York at Buffalo, Princeton University, University of Wisconsin and the University of California at Berkeley over a twenty-year period. Topics covered in this book include dynamics of systems of point masses, rigid bodies and deformable bodies, Lagrange's and Hamilton's equations, and special relativity. This latest edition has been updated with more problems and solutions and the original problems have also been modernized, excluding outdated questions and emphasizing those that rely on calculations. The problems range from fundamental to advanced in a wide range of topics on mechanics, easily enhancing the student's knowledge through workable exercises. Simple-to-solve problems play a useful role as a first check of the student's level of knowledge whereas difficult problems will challenge the student's capacity on finding the solutions.

For the Greeks, the craft of Odysseus and the wisdom of Athena were examples of metis, an elusive cast of mind that ranged from wisdom and forethought to craft and cunning. Although it informed many aspects of Greek society, metis was all but absent from the language of Greek philosophy. Invoking indigenous Chinese debates, Lisa Raphals here examines the role and significance of metis intelligence in classical Chinese philosophy, literature, history, and military strategy. Raphals first examines the range of meanings of the Chinese word zhi. As with the Greek metis, the uses of zhi include "wisdom," "knowledge," "intelligence," "skill," "cleverness," and "cunning." Drawing on parallels between the two traditions, she argues that, in China as in Greece, metis intelligence tacitly informed many aspects of cultural and social life. In China, these included views of the nature of knowledge and language, standards of personal and social morality, and theories of military strategy and statecraft. After surveying representative texts from the Warring States period, Raphals considers the function of metis intelligence as the dominant quality of central characters in two novels from the Ming dynasty, the Romance of Three Kingdoms and Journey to the West. Finally, she compares the treatment of themes of heroism and recognition in the Chinese and Greek narrative traditions. Knowing Words will be welcomed by sinologists, classicists, and scholars of comparative philosophy and literature.

This new kind of dictionary reflects the use of "rhythm rhymes" by rappers, poets, and songwriters of today. Users can look up words to find collections of words that have the same rhythm as the original and are useable in ways that are familiar to us in everything from vers libre poetry to the lyrics and music of Bob Dylan and hip hop groups.

Now in its sixth edition, Pipeline Rules of Thumb Handbook has been and continues to be the standard resource for any professional in the pipeline industry. A practical and convenient reference, it provides quick solutions to the everyday pipeline problems that the pipeline engineer, contractor, or designer faces. Pipeline Rules of Thumb Handbook assembles hundreds of shortcuts for pipeline construction, design, and engineering. Workable "how-to" methods, handy formulas, correlations, and curves all come together in this one convenient volume. Save valuable time and effort using the thousands of illustrations, photographs, tables, calculations, and formulas available in an easy to use format Updated and revised with new material on project scoping, plastic pipe data, HDPE pipe data, fiberglass pipe, NEC tables, trenching, and much more A book you will use day to day guiding every step of pipeline design and maintenance
