Waging Peace offers

the first fully comprehensive study

of Eisenhower's "New Look" program of

national security, which provided the

groundwork for the

next three decades of

America's Cold War strategy. Though the Cold War itself and the idea of containment originated under Truman, it was left to Eisenhower to develop the first coherent and sustainable strategy for addressing the issues unique to the nuclear age. To this end, he designated a decision-making system centered around the National Security Council to take full advantage of the expertise and data from various departments and agencies and of the judgment of his principal advisors. The result was the formation of a "long haul" strategy of preventing war and Soviet expansion and of mitigating Soviet hostility. Only now, in the aftermath of the

Cold War, can Eisenhower's achievement be fully appreciated. This book will be of much interest to scholars and students of the Eisenhower era, diplomatic history, the Cold War, and contemporary foreign policy.

*Air Base Attacks and Defensive Counters*

The gap between the growing cruise and ballistic missile threat to U.S. Air Force bases in Europe and the U.S. capacity and capability to counter the threat is worrisome. This report assesses alternative Air Force courses of action.

insurgency as a system; The rebellion's viewpoint: structure, operations, and proclivities; The authority's viewpoint: concepts and conduct of counterrebellion; Inflicting damage; Intelligence and information; and Rebellion and authority: A summary. Winning the Battle of the Airfields Rand Corporation  
The classic and “utterly engrossing” study of Stalin’s pursuit of a nuclear bomb during the Cold War by the renowned political scientist and historian (Foreign Affairs). For forty years the U.S.-Russian nuclear arms race dominated world politics, yet the Soviet nuclear establishment was shrouded in secrecy. Then, shortly after the collapse of

the Soviet Union, David Holloway pulled back the Iron Curtain with his “marvelous, groundbreaking study” Stalin and the Bomb (The New Yorker). How did the Soviet Union build its atomic and hydrogen bombs? What role did espionage play? How did the American atomic monopoly affect Stalin's foreign policy? What was the relationship between Soviet nuclear scientists and the country's political leaders? David Holloway answers these questions by tracing the dramatic story of Soviet nuclear policy from developments in physics in the 1920s to the testing of the hydrogen bomb and the emergence of nuclear deterrence in

the mid-1950s. This magisterial history throws light on Soviet policy at the height of the Cold War, illuminates a central element of the Stalinist system, and puts into perspective the tragic legacy of this program—environmental damage, a vast network of institutes and factories, and a huge stockpile of unwanted weapons. *Stalin and the Bomb* Bloomsbury Publishing A history of the SAC, which "entered the battle" in March 1956 and had relied on the alert force as its primary tactic since October 1957. SAC has accomplished its mission and is retired. The weapon systems it operated were transferred to several new Air Force commands. Black and

### **Force Presentation in U.S. Air Force History and Airpower Narratives**

Oxford University Press, USA

This report provides an overview of RAND's work on air base defense and attack from 1951 through 2020, describes RAND's contributions, and identifies enduring insights for improving the resiliency of U.S. air bases in the face of modern threats.

**Deterrence** Princeton University Press

Force presentation constructs are salient to service leaders because they are often viewed as a way to constrain demands for rotational forces and personnel, thereby protecting service readiness and retention. USAF leaders

are concerned that their force presentation construct is lacking in this regard. This report presents historical analysis and recommendations to inform USAF deliberations regarding future force presentation constructs.

choisie celle de la prière eucharistique et de sa reconstitution.

This professional memoir describes RAND's contributions to the evolution of computer science, particularly during the first decades following World War II, when digital computers succeeded slide rules, mechanical desk calculators, electric accounting machines, and analog computers. The memoir includes photographs and vignettes that reveal the collegial, creative, and often playful spirit in which the groundbreaking research was conducted at RAND.

**The Divine Constitution** DIANE Publishing

Andrew Marshall is a Pentagon legend. For more than four decades he has served as Director of the Office of Net Assessment, the Pentagon's internal think tank, under twelve defense secretaries and eight administrations. Yet Marshall has been on the cutting edge of strategic thinking even longer than that. At the RAND Corporation during its golden age in the 1950s and early 1960s, Marshall helped formulate bedrock concepts of US nuclear strategy that endure to this day; later, at the Pentagon, he pioneered the development of "net assessment" -- a new analytic framework for understanding the long-term military competition between

the United States and the Soviet Union. Following the Cold War, Marshall successfully used net assessment to anticipate emerging disruptive shifts in military affairs, including the revolution in precision warfare and the rise of China as a major strategic rival of the United States. In *The Last Warrior*, Andrew Krepinevich and Barry Watts -- both former members of Marshall's staff -- trace Marshall's intellectual development from his upbringing in Detroit during the Great Depression to his decades in Washington as an influential behind-the-scenes advisor on American defense strategy. The result is a unique insider's perspective on the changes in US

strategy from the dawn of the Cold War to the present day. Covering some of the most pivotal episodes of the last half-century and peopled with some of the era's most influential figures, *The Last Warrior* tells Marshall's story for the first time, in the process providing an unparalleled history of the evolution of the American defense establishment.

Herman Kahn was the only nuclear strategist in America who might have made a living as a standup comedian. In telling his story,

Ghamari-Tabrizi captures an era that is still very much with us—a time whose innocence, gruesome nuclear humor, and outrageous but deadly serious visions of annihilation have their echoes in the "known unknowns and unknown unknowns" that guide

policymakers in our own embattled world. The Military History of the Soviet Union

all your powerful Canon has to offer! Strategy in the Missile Age Rand Corporation This volume provides an introduction to the history of the Soviet armed forces from 1917 to 1991. The authors highlight the many facets of the Cold War, including the rise of the Soviet Navy after the Great Patriotic War and the collapse of the Soviet Union which marks its twentieth anniversary in 2011. *The Effects of Nuclear Weapons* John Wiley & Sons Strategy in the Missile Age first reviews the development of modern military strategy to World War II, giving the reader a reference point for the radical rethinking that follows, as Dr. Brodie considers the problems

of the Strategic Air Command, of civil defense, of limited war, of counterforce or pre-emptive strategies, of city-busting, of missile bases in Europe, and so on. The book, unlike so many on modern military affairs, does not present a program or defend a policy, nor is it a brief for any one of the armed services. It is a balanced analysis of the requirements of strength for the 1960's, including especially the military posture necessary to prevent war. A unique feature is the discussion of the problem of the cost of preparedness in relation to the requirements of the national economy, so often neglected by other military thinkers. ### **Rings of Supersonic Steel**

This book examines six decades of RAND Corporation research on deterrence for lessons relevant to the current and future

strategic environments.

*Waging Peace*

The challenges posed by insurgency and instability have proved difficult to surmount.

This difficulty may embolden future opponents to embrace insurgency in combating the United

States. Both the current and future conduct of the war on terror demand that the United States improve its ability to conduct counterinsurgency (COIN) operations. This study makes recommendations for improving COIN based on RAND's decades-long study of it.
