Banaras Hindu University (BHU) is considered one of the prestigious Universities in the world. This university provides a healthy environment, great Infrastructure and faculties. Student not only from India but also across world prepare for its entrance exam in order to get admission into this University. The book of "BHU Bachelor of Commerce (B.Com.)" has been revised for the

students who will be appearing for this exam in 2020. It is divided into 4 majors Parts: General English, Numerical Ability, Computer Knowledge, and Commerce that covers the entire syllabus and lastly an overview has been given on computer subject. It also provides the Solved Papers from [2019 - 2017] right in the beginning of the book that helps candidates to get

acquaintance with latest exam pattern and also provides the ideas for the solutions of the various tricky questions that come in the exams. Packed with relevant study material to perform well in the upcoming entrance examination for admission to BHU B.Com. (Bachelor of Commerce), it is a must have book to get assured of success.

*Compressed Sensing*  
Cengage Learning

Compressed sensing is an exciting, rapidly growing field, attracting considerable attention in electrical engineering, applied mathematics, statistics and computer science. This book provides the first detailed introduction to

the subject, highlighting recent theoretical advances and a range of applications, as well as outlining numerous remaining research challenges. After a thorough review of the basic theory, many cutting-edge techniques are presented, including advanced signal modeling, sub-Nyquist sampling of analog signals, non-asymptotic analysis of random

matrices, adaptive sensing, greedy algorithms and use of graphical models. All chapters are written by leading researchers in the field, and consistent style and notation are utilized throughout. Key background information and clear definitions make this an ideal resource for researchers, graduate students and practitioners wanting to join this exciting

research area. It can also serve as a supplementary textbook for courses on computer vision, coding theory, signal processing, image processing and algorithms for efficient data processing. **BCOM S.** Chand Publishing Never HIGHLIGHT a Book Again! *State Governments Cambridge University Press* such as Information Engineering and Soft Computing are being developed in order to provide the tools required. Conferences such as the International Conference on Information Processing and Management of Uncertainty in Knowledge-based Systems (IPMU) are being held to provide forums in which researchers can discuss the latest developments. The recent IPMU conference held at La Sorbonne in Paris brought together some of the world's leading experts in uncertainty and information fusion. In this volume we have included a selection of papers from this conference. What should be clear from looking at this volume is the number of different ways that are available for representing uncertain information. This variety in representation

al frameworks is a manifestation of the different types of uncertainty that appear in the information available to the users. Perhaps, the representation with the longest history is probability theory. This representation is best at addressing the uncertainty associated with the occurrence of different values for similar variables. This uncertainty is often described as

randomness. Rough sets can be seen as a type of uncertainty that can deal effectively with lack of specificity, it is a powerful tool for manipulating granular information. *STUDYGUIDE FOR BCOM 6 BY LEHMA Cram101* Learn business communication your way with Lehman/DuFrene/Walker's BCOM, 10E from 4LTR Press. Cengage  
Learning

The aim of this book is to provide a single reference source for the wealth of geometrical formulae and relationships that have proven useful in the description of atomic nuclei and nuclear processes. While many of the sections may be useful to students and instructors it is not a text book but rather a reference

book for experimentalists and theoreticians working in this field. In addition the authors have avoided critical assessment of the material presented except, of course, by variations in emphasis. The whole field of macroscopic (or Liquid Drop Model) nuclear physics has its origins in such early works as [Weizsacker 35] and [Bohr 39]. It continued to grow because of its success in explaining

collective nuclear excitations [Bohr 52] and fission (see the series of papers culminating in [Cohen 62]). These developments correspond to the first maximum in the histogram below, showing the distribution by year of the articles cited in our Bibliography. After the Liquid Drop Model had been worked out in some detail the development of the Strutinsky approach [Strutinsky 68]

(which associates single particle contributions to the binding energy with the shape of the nucleus) gave new life to the field. The growth of interest in heavy-ion reaction studies has also contributed.
