The people the look initially inspired have grown with the hobby, finding ways to still be cool on a tight budget and producing a micro-industry that still manages to embrace the 'built not bought' ethos. *How to Build a Patina Volkswagen* book takes a look at the differing styles of patina VW build, and imparts tips on finding and buying a project car, carrying out a sympathetic patina style renovation and includes a chapter on re-creating a patina finish on repaired areas or missing parts.

Economic, technological, and political shifts as well as changing business strategies have driven firms to unbundle production processes and disperse them across countries. Thanks to these changes, developing countries can now increase their participation in global value chains (GVCs) and thus become more competitive in agriculture, manufacturing and services. This is a paradigm shift from the 20th century when countries had to build the entire supply chain domestically to become competitive internationally. For policymakers, the focus is on boosting domestic value added and improving access to resources and technology while advancing development goals. However, participating in global value chains does not automatically improve living standards and social conditions in a country. This requires not only improving the quality and quantity of production factors and redressing market failures, but also engineering equitable distributions of opportunities and outcomes - including employment, wages, work conditions, economic rights, gender equality, economic security, and protecting the environment. The internationalization of production processes helps with very few of these development challenges. Following this perspective, *Making Global Value Chains Work for Development* offers a strategic framework, analytical tools, and policy options to address this challenge. The book conceptualizes GVCs and makes it easier for policymakers and practitioners to discuss them and their implications for development. It shows why GVCs require fresh thinking; it serves as a repository of analytical tools; and it proposes a strategic framework to guide policymakers in identifying the key objectives of GVC participation and in selecting suitable economic strategies to achieve them.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved

educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Since the early 2000s, the apparent explosion of interest in Volkswagens with original paint, rust and patina has inspired a generation of car fanatics, who might not be able to afford to

restore a car to show condition, but still want a good looking, cool car that will stand out from the crowd. Once looked upon as being in need of restoration, cars with original paint, rust and patina, especially within the global Volkswagen community, have gradually become far more popular than restored cars. When walking down a line of cars at a car show, it's easy to see why; these cars are rare, unspoiled survivors – cars that tell a story of an interesting and varied past. The look of the Volkswagens being built in this style is so honest, unspoiled and characterful, that it has begun to inspire the media; even Hollywood movie stars and celebrities. Whilst this has undoubtedly resulted in increased car values, and turned a brand of cars that had always been a cheap, honest mode of transportation into something cool with a high price tag, the generation it initially inspired has grown with the hobby, and produced a micro-industry that still manages to embrace the 'Built not bought' ethos. This book, superbly illustrated with stunning colour photographs, takes an inside look at some of the key car builders, dealers, celebrities and hobbyists, as well as the different styles of build, meaning every single car has a style all its own. Foreword by Drew Pritchard of TV's 'Salvage Hunters' fame.
