Moving beyond reductive notions of identity, myths of authenticity, fetishized traditionalism, or the constructed opposition of tradition and modernity, *The Arab City*:

Architectural and Representation critically engages contemporary architectural and urban production in the Middle East. Taking the "Arab City" and "Islamic Architecture" as sites of investigation rather than given categories, this book reframes the region's buildings, cities, and landscapes and broadens its architectural and urban canons. Arab cities are multifaceted places and sites of layered historical imaginaries; defined by regional and territorial economies, they bridge scales of production and political engagement. The essays collected here investigate cultural representation, the evolution of historical cities, contemporary architectural practices, emerging urban conditions, and responsive urban imaginaries in the Arab World. With contributions from Ashraf Abdalla, Senan Abdelqader, Nadia Abu ElÂ-Haj, Su'ad Amiry, Amale Andraos, Mohammed al-Asad, George Arbid, Mohamed Elshahed, Yasser Elsheshtawy, Rania Ghosn, Saba Innab, Adrian Lahoud, Lila Abu Lughod, Ziad Jamaledine, Ahmed Kanna, Bernard Khoury, Laura Kurgan, Ali Manger, Reinhold Martin, Timothy Mitchell, Magda Mostafa, Nasser Rabbat, Hashim Sarkis, Felicity Scott, Hala Warde, Mark Wasiuta, Eyal Weizman, Mabel O. Wilson, and Gwendolyn Wright.

Throughout the world there is evidence of mounting interest in marine resources and new maritime industries to create jobs,

economic growth and to help in the provision of energy and food security. Expanding populations, insecurity of traditional sources of supply and the effects of climate change add urgency to a perceived need to address and overcome the serious challenges of working in the maritime environment. Four promising areas of activity for 'Blue Growth' have been identified at European Union policy level including Aquaculture; Renewable Energy (offshore wind, wave and tide); Seabed Mining; and Blue Biotechnology. Work has started to raise the technological and investment readiness levels (TRLs and IRLs) of these prospective industries drawing on the experience of established maritime industries such as Offshore Oil and Gas; Shipping; Fisheries and Tourism. An accord has to be struck between policy makers and regulators on the one hand, anxious to direct research and business incentives in effective and efficient directions, and developers, investors and businesses on the other, anxious to reduce the risks of such potentially profitable but innovative investments. The EU H2020 MARIBE (Marine Investment for the Blue Economy) funded project was designed to identify the key technical and non-technical challenges facing maritime industries and to place them into the social and economic context of the coastal and ocean economy. MARIBE went on to examine with companies, real projects for the combination of marine industry sectors into multi-use platforms (MUPs). The purpose of this book is to publish the detailed analysis of each prospective and established maritime business sector. Sector experts working to a common template explain what these industries are, how they work, their prospects to create wealth and employment, and where they currently stand in terms of innovation, trends and their lifecycle. The book goes

on to describe progress with the changing regulatory and planning regimes in the European Sea Basins including the Caribbean where there are significant European interests. The book includes:

- Experienced chapter authors from a truly multidisciplinary team of sector specialisms
- First extensive study to compare and contrast traditional Blue Economy with Blue Growth
- Complementary to EU and National policies for multi-use of maritime space

“Capers Jones has accumulated the most comprehensive data on every aspect of software engineering, and has performed the most scientific analysis on this data. Now, Capers performs yet another invaluable service to our industry, by documenting, for the first time, its long and fascinating history. Capers’ new book is a must-read for every software engineering student and information technology professional.” — From the Foreword by Tony Salvaggio, CEO and president, Computer Aid, Inc. Software engineering is one of the world’s most exciting and important fields. Now, pioneering practitioner Capers Jones has written the

definitive history of this world-changing industry. Drawing on several decades as a leading researcher and innovator, he illuminates the field’s broad sweep of progress and its many eras of invention. He assesses the immense impact of software engineering on society, and previews its even more remarkable future. Decade by decade, Jones examines trends, companies, winners, losers, new technologies, productivity/quality issues, methods, tools, languages, risks, and more. He reviews key inventions, estimates industry growth, and addresses “mysteries” such as why programming languages gain and lose popularity. Inspired by Paul Starr’s Pulitzer Prize-winning *The Social Transformation of American Medicine*, Jones’ new book is a tour de force—and compelling reading for everyone who wants to understand how software became what it is today. **COVERAGE INCLUDES**

During the last decade, the Latin American and Caribbean region

has experienced unprecedented natural resources abundance. This book highlights how transparency can help realize the benefits and reduce negative externalities associated with the extractive industries in the region. A central message is that high-quality and well-managed information is critical to ensure the transparent and effective governance of the sector. The insights from experiences in the region can help policymakers design and implement effective regulatory reforms and adopt international standards that contribute to this goal. This is particularly important at a time when the recent boom experienced by extractives in the region may be coming to an end.

Italy and Saudi Arabia are united by numerous and strong ties that have developed over the decades. In 1932, the two countries signed a Treaty of Friendship that constitutes the origin of their bilateral relations. The celebrations of the 80th anniversary of the establishment of Saudi-Italian diplomatic relations provide an opportunity to assess the state of these relations, as well as to advance some proposals as to how the two countries' mutual cooperation and engagement in the regional and international arenas could be strengthened. The steady development of Saudi-Italian relations over the past 80 years has most recently been affected by the accelerated changes taking place in the Mediterranean region as part of the so-called "Arab Spring". This region represents a priority for both countries and a significant link between them. Both economic imperatives and a geo-strategic rationale lie behind the increasingly frequent calls for a

consolidation of bilateral relations between Italy and the countries of the GCC in general, and Saudi Arabia in particular. This book wishes to commemorate the outstanding level of engagement between Italy and the Kingdom of Saudi Arabia in a number of domains. It also aims to advance our knowledge of the most promising areas of cooperation, the challenges facing such cooperation and the prospects for future mutual engagement.

Oil and gas projects have special characteristics that need a different technique in project management. The development of any country depends on the development of the energy reserve through investing in oil and gas projects through onshore and offshore exploration, drilling, and increasing facility capacities. Therefore, these projects need a sort of management match with their characteristics, and project management is the main tool to achieving a successful project. Written by a veteran project manager who has specialized in oil and gas projects for years, this book focuses on using practical tools and methods that are widely and successfully used in project management for oil and gas projects. Most engineers study all subjects, but focus on project management in housing projects, administration projects, and commercial buildings or other similar projects. However, oil and gas projects have their own requirements and characteristics in management from the owners, engineering offices, and contractors' side. Not only useful to graduating engineers, new hires, and students, this volume is also an invaluable addition to any veteran project manager's library as a reference or a helpful go-to guide. Also meant to be a refresher for practicing

engineers, it covers all of the project management subjects from an industrial point of view specifically for petroleum projects, making it the perfect desktop manual. Not just for project managers and students, this book is helpful to any engineering discipline or staff in sharing or applying the work of a petroleum project and is a must-have for anyone working in this industry. *Saudi Arabia: An Environmental Overview* Government Printing Office

For many years to come this volume. . . is surely going to be the ultimate reference work on international business. . . thanks to Dunning and Lundan, have at their disposal, a wealth of relevant data, as well as theoretical and empirical analyses, which will enable them to assess the capabilities, contributions and challenges posed by the multinational enterprises to the global economy. Seev Hirsch, *International Business Review*

Multinational Enterprises and the Global Economy has become a classic in international business. . . Yet , the book s second edition is even better than the first, in part because of Professor Dunning s wise decision to choose Dr Lundan as his co-author and to draw upon her deep knowledge of various strands of research on business government relations and the societal effects of firm behaviour. . . In addition to being a remarkably useful reference book, *Multinational Enterprises and the Global Economy* is the first book any IB doctoral student should read to understand the significance and richness of IB scholarship as it has developed over the past 50 years. Alain Verbeke, *Journal of International Business Studies*

The second edition of *Multinational Enterprises and the Global Economy* provides unparalleled coverage not only of the literature relevant to IB research but

also of the evolution of IB in the world economy. Dunning and Lundan offer powerful insights into the societal effects of MNEs and the role of business government relations in the IB context. *Journal of International Business Studies*

This wonderful book offers the definitive synthesis of the modern literature on the economic aspects of international business. It is encyclopedic yet full of incisive insights. It is a creative masterpiece which unbundles the DNA of the multinational enterprise and shows how it is the cornerstone of the field of international business. Alan M. Rugman, University of Reading, UK

The rise of the multinational enterprise, and the consequent globalisation of the world economy, was arguably the single most important phenomenon of the second half of the twentieth century. This magisterial book, written by two leading authorities, examines this phenomenon in depth. It explains how foreign investment by multinationals diffused advanced technologies and novel management methods, driving productivity growth in Europe, Asia and North America; however, economic inequalities were reinforced as rich countries attracted more foreign investment than poor ones. This new edition of a classic work is not only an authoritative guide to contemporary multinational business, but a major historical resource for the future. Mark Casson, University of Reading, UK

This thoroughly updated and revised edition of a widely acclaimed, classic text will be required reading for academics, policymakers and advanced students of international business worldwide. Employing a distinctive and unified framework, this book draws together research across a range of academic fields to offer a synthesis of the determinants of MNE activity, and its effects on the economic and social well-being of

developed and developing countries. Unique to the new edition is its focus on the institutional underpinnings of the resources and capabilities of MNEs, and the role of MNE activity in transmitting and facilitating institutional change. Since the initial publication of this book more than a decade ago, the economic, managerial and social implications of globalisation and technological advancement have become even more varied and prominent. Accompanying these developments, there has been a rise in scholarly interest in interdisciplinary research addressing the important challenges of an ever-changing physical and human environment. Drawing on articles and books from international business and economics, as well as economic geography, political economy and strategic management, a systematic overview of the developments in scholarly thinking is presented.

The Saudi Arabian economy has changed almost beyond recognition since the oil boom days of the 1980s, and the Kingdom itself has changed too economically, socially, and demographically. In the second edition of *The Saudi Arabian Economy*, Mohamed Ramady uses several overlapping themes to establish and develop a framework for studying the fundamental challenges to the Saudi economy. Particular attention is paid to the benefits of short-term planning and long-term diversification intended to shield the economy from potentially de-stabilizing oil price fluctuations and the pace and diversity of domestic reforms.

The author examines the core strengths and evolution of various financial institutions and the Saudi stock market in the face of globalization, before analyzing the private sector in detail. Topics discussed include:

- The hydrocarbon and minerals sector, including the emergence of the competitive petrochemical sector
- The impact of small and medium sized businesses and the evolving role of “family” businesses
- The growing role of women in the Saudi economy
- The role of privatization and FDI as engines of change and the position of public-private-partnerships
- The establishment of a foundation for a knowledge-based economy

Finally, the author offers an analysis of the key challenges facing the Saudi economy, paying particular attention to the potential costs and benefits of globalization, and membership in the WTO. Employment, education, economic and social stability, and Saudi Arabia’s place in the Gulf Cooperation Council, as well as Saudi Arabia’s evolving strategic economic relations with China and other countries are offered as keys to the consensus building needed to ensure the Kingdom’s healthy economic future.

Tallinn Manual 2.0 expands on the highly influential first edition by extending its coverage of the international law governing cyber operations to peacetime legal regimes. The product of a three-year follow-on project by a new group of twenty renowned international law experts, it addresses such topics as sovereignty, state responsibility, human rights, and the law of air, space, and the sea. Tallinn Manual 2.0 identifies 154 'black letter' rules governing cyber operations and provides extensive commentary on each rule. Although Tallinn Manual 2.0 represents the views of the experts in their personal capacity, the project benefitted from the unofficial input of many states and over fifty peer reviewers.
