RICH JAQUAN

Contemporary Asian Australian Poets

Springer

This ground-breaking anthology collects poems written by Australian poets who are migrants, their children, and refugees of Asian heritage, spanning work that covers over three decades of writing. Inclusive of hitherto marginalised voices, these poems explore the hyphenated and variegated ways of being Asian Australian, and demonstrate how the different origins and

traditions transplanted from Asia have generated new and different ways of being Australian. This anthology highlights the complexity of Asian Australian interactions between cultures and languages, and is a landmark in a rich, diversely-textured and evolving story. Timely and proactive this anthology fills existing cultural gaps in poetic expressions of home, travel, diaspora, identity, myth, empire and language.

Mitigation of Greenhouse Gas Emissions in Livestock Production CRC Press

"Published by the Sustainable Agriculture Research and Education (SARE) program,

with funding from the National Institute of Food and Agriculture, U.S. Department of Agriculture."

Neo-nationalism and Universities Hodder Children's Books

This is Volume 42 of the Educational Media and Technology Yearbook. For the past 40 years, our Yearbook has contributed to the field of Educational Technology in presenting contemporary topics, ideas, and developments regarding diverse technology tools for educational purposes. Our Yearbook has inspired researchers, practitioners, and teachers to consider how to develop technological designs and

develop curricula and instruction integrating technology to enhance student learning, teach diverse populations across levels with effective technology integration, and apply technology in interactive ways to motivate students to engage in course content. In addition, Volume 42 features the Virtual Reality (VR) and Augmented Reality (AR) research and educational use cases, organized and coordinated by Vivienne and David. This section provides evidence that the affordances of AR, VR, and mixed reality, defined as an immersive multi-platform experience reality (XR), have begun to make indelible changes in teaching and learning in the United States. XR's recent developments stimulated the editors to propose a special edition to mark the interoperability of immersive technology to push the boundaries of human curiosity, creativity, and problem solving. After years of incremental development, XR has reached a critical level of investment, infrastructure, and emerging production. The chapters included in this section illustrate how XR can push user inquiry, engagement, learning, and interactivity to new levels within physical and digital

contexts.

Romulus, My Father CRC Press

The Role of International Administrative Law at International Organizations', edited by Peter Quayle, is centred on the law of employment relations at international organizations, and divided into four parts. It examines the interplay between international administrative law and the jurisdictional immunities of international organizations. It explores the principles and practice of resolving employment related disputes at intergovernmental institutions. It considers the dynamic development of international administrative tribunals. It examines international administrative law as the basis for the effectiveness and integrity of international organizations. Together academics, jurists and practitioners portray the employment law that governs the international civil service and the resulting accountability of the United Nations, UN Specialized Agencies, and international financial institutions, like the World Bank and IMF. Also available in Open Access.

Sustainable Soil Management University of Michigan Press

Setaria viridis and *S.italica* make up a model grass system to investigate C4 photosynthesis, cell wall biosynthesis, responses to drought, herbicide, and other environmental stressors, genome dynamics, developmental genetics and morphology, and interactions with microorganisms. *Setaria viridis* (green foxtail) is one of the world's most widespread weeds, and its small size, native variation, rapidly burgeoning genetic and genomic resources, and transformability are making it the system of choice for both basic research and its translation into crop improvement. Its domesticated variant, *S. italica* (foxtail millet), is a drought-hardy cereal grown in China, India and Africa, and new breeding techniques show great potential for improving yields and nutrition for drought-prone regions. This book brings together for the first time evolutionary, genomic, genetic, and morphological analyses, together with protocols for growing and transforming *Setaria*, and approaches to high throughput genotyping and candidate gene analysis. Authors include major *Setaria* researchers from both the USA and overseas.

Livestock in a Changing Landscape,

Volume 2 Food & Agriculture Org.

The rise of neo-nationalism is having a profound and troubling impact on leading national universities and the societies they serve. This is the first comparative study of how today's right-wing populist movements and authoritarian governments are threatening higher education. Universities have long been at the forefront of both national development and global integration. But the political and policy world in which they operate is undergoing a transition, one that is reflective of a significant change in domestic politics and international relations: a populist turn inward among a key group of nation-states, often led by demagogues, that includes China and Hong Kong, Turkey, Hungary, Russia, Brazil, the United Kingdom, and the United States. In many parts of the world, the COVID-19 pandemic provided an opportunity for populists and autocrats to further consolidate their power. Within right-wing political ecosystems, universities, in effect, offer the proverbial canary in the coal mine—a clear window into the extent of civil liberties and the

political environment and trajectory of nation-states. In *Neo-nationalism and Universities*, John Aubrey Douglass provides the first significant examination of the rise of neo-nationalism and its impact on the missions, activities, behaviors, and productivity of leading national universities. Douglass presents a major comparative exploration of the role of national politics and norms in shaping the role of universities in nation-states—and vice versa. He also explores when universities are societal leaders or followers: When they are agents of social and economic change, or simply agents reinforcing and supporting an existing social and political order. In a series of case studies, Douglass and contributors examine troubling trends that threaten the societal role of universities, including attacks on civil liberties, free speech, and the validity of science; the firing and jailing of academics; anti-immigrant rhetoric; and restrictions on visas with consequences for the mobility of academic talent. The book also offers recommendations to preserve the autonomy and academic freedom of universities and their constituents. Neo-

nationalism and *Universities* is written for a broad public readership interested and concerned about the rise of nationalist movements, illiberal democracies, and autocratic leaders. Contributors: José Augusto Guilhon Albuquerque, Elizabeth Balbachevsky, Thomas Brunotte, Igor Chirikov, Igor Fedyukin, Karin Fischer, Wilhelm Krull, Brendan O'Malley, Bryan E. Penprase, Marijk van der Wende

Read the books that inspired the How to Train Your Dragon films! This book will be a hit with children and adults alike. The story continues in the tenth volume of Hiccup's How to Train Your Dragon memoirs. When we last left Hiccup things were getting very dark indeed. The Dragon Rebellion has begun. Snotlout is the new Chief of the Hooligan Tribe. Stoick has been banished and given the Slavemark. And Alvin the Treacherous has EIGHT of the King's Lost Things, and has been proclaimed the new King of the Wilderwest ... But what can Hiccup do, now all alone and in exile, hunted by both humans and dragons? Can he find the Dragon Jewel, mankind's last and only hope? And if he

does, what will he do with it? How to Train Your Dragon is now a major DreamWorks franchise. How to Train Your Dragon 2 hits cinemas in Summer 2014 starring Gerard Butler, Cate Blanchett and Jonah Hill and the TV series, Riders of Berk, can be seen on CBeebies and Cartoon Network. Check out www.howtotrainyourdragonbooks.com for games, downloads, activities and sneak peeks! Read all about Hiccup and all of your favourite characters, learn to speak Dragonese and train your own dragon to do tricks!

Completely revised and updated, the Second Edition of Specialty Corns includes everything in the first edition and more. Considered the standard in this field, significant changes have been made to keep all the information current and bring the references up-to-date. Two new chapters have been added to keep up with the latest trends: Blue Corn and Baby Corn. Access the latest methods in developing specialty corns with this standard-setting reference. Edited by an expert in the field who has spent his professional life working with corn,

Specialty Corns, Second Edition discusses the genetic variation inherent in corn, genetic materials available, breeding methods, and special problems associated with the development of specialty corns. Hallauer has assembled a team of international experts who have contributed to this work.

Next Generation Science Standards

In the context of improving water productivity, there is a growing interest in deficit irrigation, an irrigation practice whereby water supply is reduced below maximum levels and mild stress is allowed with minimal effects on yield. Under conditions of scarce water supply and drought, deficit irrigation can lead to greater economic gains than maximizing yields per unit of water for a given crop; farmers are more inclined to use water more efficiently, and more water-efficient cash crop selection helps optimize returns. However, this approach requires precise knowledge of crop response to water as drought tolerance varies considerably by species, cultivar and stage of growth. The studies present the latest research concepts and involve various practices for

deficit irrigation. Both annual and perennial crops were exposed to different levels of water stress, either during a particular growth phase, throughout the whole growing season or in a combination of growth stages. The overall finding, based on the synthesis of the different contributions, is that deficit or regulated-deficit irrigation can be beneficial where appropriately applied. Substantial savings of water can be achieved with little impact on the quality and quantity of the harvested yield. However, to be successful, an intimate knowledge of crop behavior is required, as crop response to water stress varies considerably.

Experiences and Regional Perspectives
Wesleyan University Press

The U.S. Department of Energy (DOE) and the U.S. Department of Agriculture (USDA) are both strongly committed to expanding the role of biomass as an energy source. In particular, they support biomass fuels and products as a way to reduce the need for oil and gas imports; to support the growth of agriculture, forestry, and rural economies; and to foster major new domestic industries-- biorefineries--making a variety of fuels, chemicals, and other

products. As part of this effort, the Biomass R AND D Technical Advisory Committee, a panel established by the Congress to guide the future direction of federally funded biomass R AND D, envisioned a 30 percent replacement of the current U.S. petroleum consumption with biofuels by 2030. Biomass--all plant and plant-derived materials including animal manure, not just starch, sugar, oil crops already used for food and energy--has great potential to provide renewable energy for America's future. Biomass recently surpassed hydropower as the largest domestic source of renewable energy and currently provides over 3 percent of the total energy consumption in the United States. In addition to the many benefits common to renewable energy, biomass is particularly attractive because it is the only current renewable source of liquid transportation fuel. This, of course, makes it invaluable in reducing oil imports--one of our most pressing energy needs. A key question, however, is how large a role could biomass play in responding to the nation's energy demands. Assuming that economic and financial policies and advances in

conversion technologies make biomass fuels and products more economically viable, could the biorefinery industry be large enough to have a significant impact on energy supply and oil imports? Any and all contributions are certainly needed, but would the biomass potential be sufficiently large to justify the necessary capital replacements in the fuels and automobile sectors?

Next Generation Science Standards identifies the science all K-12 students should know. These new standards are based on the National Research Council's *A Framework for K-12 Science Education*. The National Research Council, the National Science Teachers Association, the American Association for the Advancement of Science, and Achieve have partnered to create standards through a collaborative state-led process. The standards are rich in content and practice and arranged in a coherent manner across disciplines and grades to provide all students an internationally benchmarked science education. The print version of Next Generation Science

Standards complements the nextgenscience.org website and: Provides an authoritative offline reference to the standards when creating lesson plans Arranged by grade level and by core discipline, making information quick and easy to find Printed in full color with a lay-flat spiral binding Allows for bookmarking, highlighting, and annotating

Coronavirus Politics JHU Press

Makes the case for systems thinking in an easily accessible form for a broad interdisciplinary audience, including health system stewards, programme implementers, researchers, evaluators, and funding partners.

Biochar in Horticulture: Prospects for the Use of Biochar in Australian Horticulture

Food and Agriculture Organization

What do you do when you profoundly disagree with someone you love? Wearing a hijab is a touchstone of religious identity, but it is also imbued with a complex array of historical and contemporary meanings. In Alana Valentine's new play, the cultural meaning of the hijab has become a wedge between generations. At the heart of *Shafana and Aunt Sarrinah* is the relationship between an aunt and her

niece. Both devout Muslims, the younger woman wants to put on a headscarf, the older woman tries to dissuade her. For Aunt Sarrinah, the hijab represents a world from which she has escaped; for her niece, Shafana, it is a personal statement of renewed faith. Alana Valentine has written a startling meditation on the clash between individual freedom and community reaction and, as academic Christina Ho acclaims, "a quietly insightful intervention that portrays what media headlines never can; the multiple meanings of the headscarf for Muslim women". (1 act, 2 female).

'...an outstanding achievement that will, with its skill and elegance, deeply enrich Australian poetry and whoever reads it.' Judges' citation, 2013 NSW Premier's Literary Award for Poetry. Ali Cobby Eckermann, a Yankunytjatjara/Kokatha poet, is at the forefront of Australian Indigenous poetry. *Inside My Mother* is both a political and personal collection, angry and tender, propelled by the need to remember, yet brimming with energy and vitality – qualities that distinguished

her previous, prize-winning verse novel, *Ruby Moonlight*. Tributes to country, to her elders, and to the animals and spirits that inhabit the landscape, coupled with the rhythms of mourning and celebration that pulse through the poems, make this a moving and personal collection. Grief is deeply felt and vividly portrayed in poems such as 'Inside My Mother' and 'Lament'. There is defiance and protest in 'Clapsticks' and 'I Tell You True'. In the final section there is a marked generational shift as the elders begin to pass away and the poet as grandmother comes to accept her rightful place as matriarch.

The Striped World
Springer Nature

While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that country has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's

expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas and policy proposals from leading China specialists, *China's Influence and American Interests* argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and

methods than they do now.

The Growing Assault on Truth and Memory
Academic Press

Carbohydrates in Food, Third Edition provides thorough and authoritative coverage of the chemical analysis, structure, functional properties, analytical methods, and nutritional relevance of monosaccharides, disaccharides, and polysaccharides used in food.

Carbohydrates have become a hot topic in the debate about what to eat. This new edition includes increased treatment of resistant starch, dietary fiber, and starch digestion, especially in relation to different diets, suggesting that carbohydrate consumption should be reduced. New to the Third Edition: Explains how models for starch molecules have been improved recently leading to clearer understanding Discusses the growing interest in new sources of carbohydrates, such as chitosan and fructans, because of their function as prebiotics Features the latest developments on research into dietary fiber and starch digestion Carbohydrates in Food, Third Edition combines the latest data on the analytical, physicochemical, and nutritional properties of

carbohydrates, offering a comprehensive and accessible single source of information. It evaluates the advantages and disadvantages of using various analytical methods, presents discussion of relevant physicochemical topics that relate to the use of carbohydrates in food that allow familiarity with important functional aspects of carbohydrates; and includes information on relevant nutritional topics in relation to the use of carbohydrates in food.

Specialty Corns, Second Edition Faber & Faber

The Mediterranean basin is the main area both for the cultivation of durum wheat and for the consumption of derived food products such as pasta, couscous, and bulgur. The ongoing climate changes and new consumer preferences make the selection of genetic materials suitable for the present scenarios particularly difficult. This Special Issue Book covers several aspects of the genetic improvement of durum wheat, collected in seven chapters including two review papers focused on milestones in durum wheat breeding programs across the countries of the Mediterranean basin and sub-Saharan

Africa. Water deficit and heat stress occurring during the reproductive stage of wheat have a detrimental effect on yield and grain quality of durum wheat. The papers included in this Special Issue propose selection strategies for traits associated with yield and grain quality (e.g., root architecture, carbon isotope composition of grain, and gluten quality) under natural or artificial environmental conditions of drought, heat, and nutrient stress. This Special Issue presents new breeding opportunities for selecting modern varieties adapted to climate change and expanding durum wheat production.
