The Chicago Medical  
Journal JP Medical Ltd  
"Like all clinicians,

reproductive health care  
providers face specialty-  
specific ethical questions.  
However, the first editor  
of this book, Dr. Julie Chor  
(JC), has never found an  
ethics text that is tailored  
to the needs of practicing  
clinicians, students, and  
trainees in Reproductive  
Healthcare. This is an

unfortunate gap in the  
literature, because  
whether reproductive  
health providers come  
from Obstetrics and  
Gynecology, Family  
Medicine, Pediatrics or  
another field, they all  
must be able to identify  
and analyze complex  
ethical issues that lie at

the crossroads of patient decision-making, scientific advancement, political controversy, government regulation, and profound moral considerations in the context of continually evolving medical, legal, and societal factors. To fill this gap, Dr. Chor invited co-editor Professor Katie Watson (KW) to partner in creating the text that she has always longed to use but has never found as an Obstetrician-Gynecologist practicing and teaching in this complex milieu"--

Press  
 Clinical Trials  
 Comprehensive resource presenting methods essential in planning, designing, conducting, analyzing, and interpreting clinical trials  
 The Fourth Edition of Clinical Trials builds on the text's reputation as a straightforward, detailed, and authoritative presentation of quantitative methods for clinical trials, discussing principles of design for various types of clinical trials and elements of planning the experiment,

assembling a study cohort, assessing data, and reporting results. Each chapter contains an introduction and summary to reinforce key points. Discussion questions stimulate critical thinking and help readers understand how they can apply their newfound knowledge. Written by a highly qualified author with significant experience in the field, the Fourth Edition of Clinical Trials approaches the topic with: Problems that may arise during a trial, and accompanying

common sense solutions  
Design alternatives for  
addressing many  
questions in therapeutic  
development Statistical  
principles with new and  
provocative topics, such  
as generalizing results,  
operating characteristics,  
trial issues during the  
COVID-19 pandemic, and  
more Alternative  
medicine, ethics, middle  
development,  
comparative studies,  
adaptive designs, and  
clinical trials using point  
of care data Revamped  
exercise sets, updated  
and extensive references,

new material on  
endpoints and the  
developmental pipeline,  
and revisions of numerous  
sections, tables, and  
figures Standing out due  
to its accessible and  
broad coverage of  
statistical design methods  
which are the building  
blocks of clinical trials and  
medical research, Clinical  
Trials is an essential  
learning aid on the  
subject for undergraduate  
and graduate clinical trials  
courses.  
*Clinical Essays in  
Obstetrics and  
Gynaecology for MRCOG*

*Part II* Oxford University  
Press  
An analysis of a scandal  
involving a doctor  
accused of allowing a  
number of women to  
develop cervical cancer  
from carcinoma in situ as  
part of an experiment he  
had been conducting  
since the 1960s into  
conservative treatment of  
the disease, to more  
broadly explore dramatic  
changes in medical  
history in the second half  
of the twentieth century.

First multi-year cumulation covers six years: 1965-70. Nervous Diseases: Their Description and Treatment Jaypee Brothers, Medical Publishers Pvt. Limited. Reproductive health care professionals in fields such as Obstetrics and Gynecology, Family Medicine, and Pediatrics face difficult ethical issues because they work at the crossroads of patient decision-making, scientific advancement, political controversy, legal regulation, and profound

moral considerations. The dilemmas these professionals face expose big-picture bioethics questions of interest to everyone. Yet for clinicians striving to deliver excellent patient care, the ethical questions that make daily practice challenging can be just as nuanced. This volume presents a carefully curated compilation of essays written by leading experts in the fields of medicine, ethics, and law, who address key issues at the forefront of reproductive ethics. It is

organized into three main sections: I. Contraception and Abortion Ethics - Preventing Pregnancy and Birth, II. Assisted Reproduction Ethics - Initiating Pregnancy, and III. Obstetric Ethics - Managing Pregnancy and Delivery. Each section begins with a short introduction by the editors providing an overview of the area and contextualizing the essays that follow. This volume's primary aim is to be useful to practicing clinicians, students, and trainees by providing

short and practical essays covering urgent topics-- from race, religion and abortion, to legal liability, violations of confidentiality and maternal choices that risk future children's health. This collection provides clinicians at all levels of training with frameworks they need to approach the intimate and high-stakes encounters central to their profession.

Few specialties have a longer or richer eponymous background than obstetrics and gynaecology. Eponyms add a human side to an increasingly technical profession and represent the historic tradition and language of the speciality. This collection aims to

perpetuate the names and contributions of pioneers and offer introductory profiles to the founders in whose steps we follow. This third edition includes 26 new entries, as well as expanded detail, illustration and quotation for existing entries. Biographical data and historical and medical context are discussed for each of the 391 names, with reference to 34 countries, reflecting the field's far reaching origins. More than 1700 original references feature,

alongside an extensive bibliography of more than 2500 linked references to assist readers searching for more detailed information. This is a volume for physicians, midwives, medical historians, medical ethicists and all those interested in the history and evolution of obstetrical and gynaecological treatment. *Acupuncture for IVF and Assisted Reproduction* Elsevier Health Sciences. The management of infertility using acupuncture is an

expanding area of practice and one which is frequently rewarding for TCM acupuncture practitioners. *Acupuncture for IVF and Assisted Reproduction* has been specially prepared to meet the growing demand for information in this area and draws upon 20 years combined experience of the authors together with the latest evidence from both orthodox medicine and TCM. Richly illustrated and clearly written throughout, the book takes the reader through

the anatomy and physiology of reproductive medicine (from both an orthodox and TCM perspective) and explains the underlying basis of orthodox medical fertility tests and investigations. The volume then explores the pathology and aetiology of TCM syndromes and shows how common fertility-related conditions, such as endometriosis and male factor infertility, affect Assisted Reproductive Technology (ART) success rates. It explains in great detail

how to take a reproductive medical history and successfully diagnose TCM syndromes. Acupuncture for IVF and Assisted Reproduction also provides guidelines on how to regulate the menstrual cycle in preparation for IVF treatment and shows how lifestyle can affect fertility and ART success rates. Placing a strong emphasis on the practical aspects of patient care, Acupuncture for IVF and Assisted Reproduction contains an abundance of case history templates, algorithmic

acupuncture treatment pathways and patient fact sheets and will be ideal for all acupuncture practitioners working in this field. "A must have for the bookshelf of any acupuncturist who is ever called upon to treat fertility issues - if you have room for one book this surely must be it." Reviewed by The Acupuncture Fertility Centre March 2015 "Practitioners of all levels of experience and TCM students should find it compelling reading and an invaluable companion

to their learning."  
 Reviewed by Stephen Clarke, Journal of the Australian Traditional Medicine Society May 2015 "This book is extremely well researched and referenced."  
 Reviewed by Danny Maxwell on behalf of Journal of Chinese Medicine, February 2015  
The Journal of the Michigan State Medical Society John Wiley & Sons  
 MRCOG Short Essay Questions is the essential aid for all trainees studying for the membership examination

of the Royal College of Obstetricians and Gynaecologists. This book contains 150 short essay questions, clearly structured to facilitate both learning and practice. Questions are divided primarily into obstetrics and gynaecology and secondly by main topics such as infertility, operative gynaecology and antenatal care. The answers are written in the form of bullet points; a format that not only clearly identifies the key points but also emulates

the structure of the model answers given to the examiners by the RCOG. Khaldoun Sharif is a consultant in obstetrics and gynaecology at the Birmingham Women's Hospital, and has a proven track record as an author of MRCOG revision books. His co-author, Parveen Abedin recently passed the examination and has therefore provided invaluable insights that have ensured the content is both appropriate and up-to-date.
