HODGES DALTON

Rivista di economia agraria Princeton University Press
 The volume is an easy reading and a must for the beginner student and interested party of the history of Armenia as well as for those more familiar with Armenian and its history. The author, an expert on Armenian history, has masterfully covered all aspects of the Armenian history such as Armenian literature, Armenian Church, the history of Armenian old and modern language, architecture, sculpture, music etc. along with all the historical events, starting from the beginning of the human civilization and that of Armenian one to the modern era of Armenia.

Folklore as an Historical Science Springer Nature

Assembles decades of practical insight to help gardeners and orchardists. From planting to harvesting, selection to storage, and pruning to pest control, you'll find the answers here.--Adapted from back cover.

The Global Flora Green Books

Situated at the crossroads of east and west between the Mediterranean, Black, and Caspian seas, the richly historic region of Armenia has provided the world with one of its most varied and exciting culinary traditions. Fragrant with the aromas of spices and herbs, Armenian cuisine abounds in succulent kebabs, stuffed vegetables and fruits, opulent pilafs, delectable breads, and irresistible pastries and confections that have been perfected by generations of ingenious

cooks over a period of many centuries. The 375 recipes and variations in this book range from time-honored favorites to inspired innovations and include many highly original specialties from the Caucasus, which were previously unknown in the West. You will find all the classics in this definitive guide - tanabour, dolma, sarma, keuftteh, shish kebab, moussaka, boereg, manti, lahmajoon, lavash, pideh, choereg, gatah, baklava, tel kadayif, kurabia, and many more. As a bonus, the book includes a number of Sonia Uvezian's own superb creations, derived from the Armenian tradition, important contributions to a vigorous culinary style. Among these are Pomegranate-Glazed Roast Chicken with Apricot and Chestnut Stuffing; Fried Fish with Oranges, Black Olives, and Mint Leaves; Saffron Rice Pilaf with Toasted Almonds and Sesame Seeds;

and Yogurt Cream (a delectable low-calorie alternative to sweetened whipped cream). The book also includes valuable historical information, a selection of perfectly harmonized menus, and an excellent glossary. Long recognized as the standard in its field, *The Cuisine of Armenia* has received outstanding reviews from major publications both in this country and abroad and has been a selection of four different book clubs. Written by one of America's most gifted cookbook authors, it is a "must have" volume, whether you already own one or dozens of books on Armenian, Middle Eastern, or eastern Mediterranean cooking. Sonia Uvezian was born and brought up in Beirut, Lebanon. A leading authority on Middle Eastern and Caucasian cooking and the winner of a James Beard Award, she is the author of six other highly acclaimed cookbooks, including *Recipes and Remembrances from an Eastern Mediterranean Kitchen*, *Cooking from the Caucasus*, and *The Book of Yogurt*. Several of her books have been selections of Book-of-the-Month Club and published internationally. Ms. Uvezian has also contributed articles and recipes to *Gourmet*, *Bon Appetit*, *Vogue*, and numerous other publications."

The recent development of ideas on biodiversity conservation was already being considered almost three-quarters of a century ago for crop plants and the wild species related to them, by the Russian geneticist N.I. Vavilov. He was undoubtedly the first scientist to understand the importance for humankind of conserving for utilization the genetic diversity of our ancient crop plants and their wild relatives from their centres of diversity. His collections showed various traits of adaptation to environmental extremes and biotypes of crop diseases and pests which were unknown to most plant breeders in the first quarter of the twentieth century. Later, in the 1940s-1960s scientists began to realize that the pool of genetic diversity known to Vavilov and his colleagues was beginning to disappear. Through the replacement of the old, primitive and highly diverse land races by uniform modern varieties created by plant breeders, the crop gene pool was being eroded. The genetic diversity of wild species was equally being threatened by human activities: over-exploitation, habitat destruction or fragmentation, competition resulting from the introduction of alien species or varieties, changes and intensification of land use,

environmental pollution and possible climate change.

Micropropagation of Woody Trees and Fruits Springer Science & Business Media

This volume collects the best scientific contribution presented in the 3rd World Conference on Terraced Landscapes held in Italy from 6th to 15th October 2016, offering a deep and multifaceted insight into the remarkable heritage of terraced landscapes in Italy, in Europe and in the World (America, Asia, Australia). It consists of 2 parts: a geographical overview on some of the most important terraced systems in the world (1st part), and a multidisciplinary approach that aims to promote a multifunctional vision of terraces, underlining how these landscapes meet different needs: cultural and historical values, environmental and hydrogeological functions, quality and variety of food, community empowerment and sustainable development (2nd part). The volume offers a great overview on strengths, weaknesses, functions and strategies for terraced landscapes all over the world, summarizing in a final manifest the guidelines to provide a future for these landscapes as natural and cultural heritage.

Bibliotheca Gastronomica Edizioni Polistampa

This volume includes an introduction to The Global Flora series and an overview of an angiosperm poster. The poster visually illustrates relationships of all angiosperm families (following APG IV) and flower images representing 269 plant families. The poster also lists important characters for major grades and clades.

Emilio Sereni's classic work is now available in an English language edition. *History of the Italian Agricultural Landscape* is a synthesis of the agricultural history of Italy in its economic, social, and ecological context, from antiquity to the mid-twentieth century. From his perspective in the Italian tradition of cultural Marxism, Sereni guides the reader through the millennial changes that have affected the agriculture and ecology of the regions of Italy, as well as through the successes and failures of farmers and technicians in antiquity, the middle ages, the Renaissance, and the Industrial Revolution. In this sweeping historical survey, he describes attempts by successive generations to adapt Italy's natural environment for the purposes of agriculture and to respond to its changing ecological problems. *History of the Italian Agricultural Landscape* first appeared in 1961. At the time of its publication it was a

pathbreaking work, parallel in its importance for Italy to Marc Bloc's masterwork of 1931, *The Original Characteristics of French Rural History*. Sereni invented the concept of the historical "agricultural landscape": an interdisciplinary characterization of rural life involving economic and social history, linguistics, archeology, art history, and ecological studies. Originally published in 1997. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Environment, Health, and Safety CRC Press
Over one hundred of the world's most important species of nuts are systematically accounted in this informative handbook. The text defines nuts and discusses their economic and nutritional value. For easy reference; there is an illustrated account of each nut by species, arranged alphabetically by scientific name. Each account includes the family name, several colloquial names, and paragraphs on uses, folk medicine, chemistry, germplasm, distribution, ecology, cultivation, harvesting, yields, energy, and biotic factors. Chapters Describe: Uses Folk medicine Chemistry Germplasm Distribution Ecology Cultivation Harvesting Yields and economics Energy Biotic factors

CRC Handbook of Nuts Springer
Consideration of the interactions between decisions made at one point in the supply chain and its effects on the subsequent stages is the core concept of a systems approach. Postharvest Handling is unique in its application of this systems approach to the handling of fruits and vegetables, exploring multiple aspects of this important process through chapters written by experts from a variety of backgrounds. Newly updated and revised, this second edition includes coverage of the logistics of fresh produce from multiple perspectives, postharvest handling under varying weather conditions, quality control, changes in consumer eating habits and other factors key to successful postharvest handling. The ideal book for understanding the economic as well as physical impacts of postharvest handling decisions. Key Features: *Features

contributions from leading experts providing a variety of perspectives*Updated with 12 new chapters*Focuses on application-based information for practical implementation*System approach is unique in the handling of fruits and vegetables

About the Contemplative Life London : Methuen

The Atlas of Italian Amphibians and Reptiles presents the distribution, ecology and conservation status of the 37 species of amphibians and the 50 species of reptiles found in Italy. A 10x10 km UTM grid map is supplied for each species, on the basis of more than 70.000 records contributed by 900 collaborators during the Societas Herpetologica Italica survey project, started in 1994. Entries, illustrated with photos, are subdivided into the following headings: taxonomy, general distribution, comments on the distribution map, habitat, altitudinal distribution, annual activity cycle, reproduction and status of the Italian populations. General sections on biogeography, history of herpetology in Italy, paleoherpetology and herpetological fauna of the small Italian islands are also included. Italian and English text.

Musei Petiveriani centuria prima CRC Press
It is well established that certain strains of yeasts are suitable for transforming grape sugars into alcohol, while other yeast strains are not suitable for grape fermentations. Recent progress has clearly demonstrated that the sensory profile of a wine is characteristic of each vine cultivated, and the quality and technological characteristics of the final product varies considerably due to the strains which have performed and/or dominated the fermentation process. Because of their technological properties, wine yeast strains differ significantly in their fermentation performance and in their contribution to the final bouquet and quality of wine, such as useful enzymatic activities and production of secondary compounds related both to wine organoleptic quality and human health. The wine industry is greatly interested in wine yeast strains with a range of specialized properties, but as the expression of these properties differs with the type and style of wine to be made, the actual trend is in the use of selected strains, which are more appropriate to optimize grape quality. Additionally, wine quality can be influenced by the potential growth and activity of undesirable yeast species, considered spoilage yeasts, which cause sluggish and stuck fermentation and detrimental taste and aroma in the wine.

L'Italia agricola Springer Science & Business Media

This book provides comprehensive information on micropropagation of economically important forest and fruit trees, which is usually available in scattered literature. Topics cover a wide range, from tropical forest and fruit trees for paper or food supply, to Prunus species for local craft bark production.

Lexicon of Pulse Crops

An investigation into the mysterious case of the vanishing honeybee.

Yeasts in the Production of Wine Springer

Health Canada's Pest Management Regulatory Agency (PMRA), under the authority of the Pest Control Products Act and Regulations, has granted conditional registration for the sale and use of Thiencarbazono-methyl Technical Herbicide, Velocity Herbicide and AE1162464 WG63 Herbicide, containing the technical grade active ingredient thiencarbazono, to control specific weeds in corn and wheat (spring and durum).

This overview describes the key points of the evaluation, while the Science Evaluation provides detailed technical information on the human health, environmental and value assessments of Thiencarbazono-methyl Technical Herbicide, Velocity Herbicide and AE1162464 WG63 Herbicide.--Document.
Raccolta ufficiale delle leggi e dei decreti della Repubblica italiana Academic Press
From the author of the acclaimed and much-loved *Waterlog* and *Wildwood*. For the last six years of his life, Roger Deakin kept notebooks in which he wrote his daily thoughts, impressions, feelings and observations. Discursive, personal and often impassioned, they reveal the way he saw the world, whether it be observing the teeming ecosystem that was Walnut Tree Farm, thinking about the wider environment, walking in his fields or on Mellis Common, or quietly contemplating his past and present life. Notes From Walnut Tree Farm collects the very best of these writings, capturing Roger's extraordinary, restless curiosity into the natural and human worlds, his love of literature and music, his knack for making unusual and apposite connections, and of course his distinct and subversive charm and humour. Together they cohere to present a passionate, engaged and - in spite of the worst pressures of contemporary life - optimistic view of our changing world.

Alternative Food Networks

Discusses the various options for conserving plants at the level of the gene, species and community.

Atti

Lexicon of Pulse Crops integrates botanical and linguistic data to analyze and interpret the grain legume significance from the earliest archaeological and written records until the present day. Aimed at both agronomic and linguistic research communities, this book presents a database containing 9,500 common names in more than 900 languages and dialects of all ethnolinguistic families, denoting more than 1,100 botanical taxa of 14 selected pulse crop genera and species. The book begins with overviews of the world's economically most important grain legume crops and their uncultivated relatives, as well as the world's language families with their inner structure, including both extinct and living members. The main section of the text presents 14 specialized book chapters covering *Arachis*, *Cajanus*, *Cicer*, *Ervum*, *Faba*, *Glycine*, *Lablab*, *Lathyrus*, *Lens*, *Lupinus*, *Phaseolus*, *Pisum*, *Vicia*, and *Vigna*. They provide the reader with extensive lists of the botanically accepted species and subtaxa and surveys lexicological abundance in all world's ethnolinguistic families, comprising extinct and living as well as natural and constructed languages, while the vernacular names for the most significant taxa are presented in comprehensive tables. Each of these chapters also presents the existing etymologies and novel approaches to deciphering the origins of common names, accompanied by one original color plate depicting possible root evolutions in the form of corresponding pulse crop plants.

History of the Alps, 1500-1900

In recent years, Alternative Food Networks (AFNs) have been a key issue both in the scientific community and in public debates. This is due to their profound implications for rural development, local sustainability, and bio-economics. This edited collection discusses what the main determinants of the participation of operators - both consumers and producers - in AFNs are, what the conditions for their sustainability are, what their social and environmental effects are, and how they are distributed geographically. Further discussions include the effect of AFNs in structuring the food chain and how AFNs can be successfully scaled up. The authors explicitly take an interdisciplinary approach to analyse AFNs from different perspectives, using as an example the Italian region of Piedmont, a particularly interesting case study due to the diffusion of AFNs in the area, as well as due to the fact that it was in this region that the 'Slow Food' movement originated.
