Digital technologies have profoundly impacted the arts and expanded the field of sculpture since the 1950s. Art history, however, continues to pay little attention to sculptural works that are conceived and 'materialized' using digital technologies. How can we rethink the artistic medium in relation to our technological present and its historical precursors? A number of theoretical approaches discuss the implications of the so-called 'Aesthetics of the Digital', referring, above all, to screen-based phenomena. For the first time, this publication brings together international and trans-historical research perspectives to explore how digital technologies re-configure the understanding of sculpture and the sculptural leading into the (post-)digital age. Up-to-date research on digital technologies' expansion of the concept of sculpture Linking historical sculptural debates with discourse on the new media and (post-)digital culture

By developing the concept of the "digital effects emblem," Kristen Whissel contributes a new analytic rubric to cinema studies. An "effects emblem" is a spectacular, computer-generated visual effect that gives stunning expression to a film's key themes. Although they elicit feelings of astonishment and wonder, effects emblems do not interrupt narrative, but are continuous with story and characterization and highlight the narrative stakes of a film. Focusing on spectacular digital visual effects in live-action films made between 1989 and 2011, Whissel identifies and examines four effects emblems: the illusion of gravity-defying vertical movement, massive digital multitudes or "swarms," photorealistic digital creatures, and morphing "plasmatic" figures. Across films such as Avatar, The Matrix, the Lord of the Rings trilogy, Jurassic Park, Titanic, and Crouching Tiger, Hidden

Dragon, these effects emblemize heighten the narrative drama by contrasting power with powerlessness, life with death, freedom with constraint, and the individual with the collective.

Cataloging standards practiced within the traditional library, archive and museum environments are not interoperable for the retrieval of objects within the shared online environment. Within today's information environments, library, archive and museum professionals are becoming aware that all information objects can be linked together. In this way, information professionals have the opportunity to collaborate and share data together with the shared online cataloging environment, the end result being improved retrieval effectiveness. But the adaptation has been slow: Libraries, archives and museums are still operating within their own community-specific cataloging practices. This book provides a historical perspective of the evolution of linking devices within the library, archive, and museums environments, and captures current cataloging practices in these fields. It offers suggestions for moving beyond community-specific cataloging principles and thus has the potential of becoming a springboard for further conversation and the sharing of ideas.

Marshall McLuhan was the greatest prophet of the digital age. In the 1960s, McLuhan, a Canadian literary theorist reared on Elizabethan satire and the labyrinthine novels of James Joyce, turned his attention toward the budding and befuddling electronic age. Like most prophets, McLuhan became one through a fascination with God. Prophets divine their wisdom from a source, and Digital Communion shows that McLuhan's was his own Catholic faith. In other words, the greatest prophet of the digital age was an ardent Christian. A reconsideration of his vision can change the way we view the online world. A Catholic convert, McLuhan foretold a digital age full of blessings and sins: a world where information was a phone call or keystroke away, but where our new global village could also bring out the worst in us. For him, mass media was a form of Mass. McLuhan thought that while the print world was visual, the electric world—especially television—was a medium of touch. It enveloped us. For McLuhan, God was everywhere, including in the electric light. Digital Communion considers the religious history of mass communication, from the Gutenberg Bible to James Joyce's literary forerunners of hypertextual language to McLuhan's vision of the electronic world as a place of potential spiritual exchange, in order to reveal how we can cultivate a more spiritual vision of the internet—a vision we need now more than ever.

This book explores the interrelations between food, technology and knowledge-sharing practices in producing digital food cultures. *Digital Food Cultures* adopts an innovative approach to examine representations and practices related to food across a variety of digital media: blogs and vlogs (video blogs), Facebook, Instagram, YouTube, technology developers' promotional media, online discussion forums and self-tracking apps and devices. The book emphasizes the diversity of food cultures available on the internet and other digital media, from those celebrating unrestrained indulgence in food to those advocating very specialised diets requiring intense commitment and focus. While most of the digital media and devices discussed in the book are available and used by people across the world, the authors offer valuable insights into how these global technologies are incorporated into everyday lives in very specific geographical contexts. This book offers a novel contribution to the rapidly emerging area of digital food studies and provides a framework for understanding contemporary practices related to food production and consumption internationally.

Digital media present opportunities for new types of consumption including desiring, buying, collecting, making, and even selling digital virtual goods. To these activities we can add those taking place in virtual communities of consumption, online shops, brand websites, and online auction houses that together amount to a vast new landscape of consumption. Digital virtual consumption motivates concatenated practices which produce meaningful experience for their users as well as market opportunities to profit from them. Consumers create and maintain elaborate wish lists, engaging with simulations of brands on websites and in videogames, coveting items for use in online games and even spending 'real' money on these, undertaking entrepreneurial activity in virtual worlds, conjuring nostalgia via online auctions, engaging in playful consumption in other new retail formats, writing reviews of products as part of the consumption experience, engaging in online activist activities, and many other emerging behaviors. Analyses of consumption in the digital virtual realm are however limited. This collection brings together experienced researchers from the fields of consumer research, digital games, and virtual worlds to provide conceptual and empirical work that helps us understand these new and significant consumer activities. Online communities negotiate the 'correct' use of goods and offer technical advice, consumers develop new products, individuals create and distribute their own promotional material for their favorite brands, and entrepreneurial consumers market and sell their own products online. Here we may see a blurring of consumption and production, or work and leisure activity that requires further thought about what makes it meaningful for individuals. The chapters in this volume take stock of the emergence and likely importance of digital virtual consumption for consumer culture, including a review of both new and existing conceptual and methodological tools as well as a resource of key examples and analyses of practices.

Drawing on recent theories of digital media and on the materiality of words and images, this fascinating study makes three original claims about the work of William Blake. First, Blake offers a critique of digital media. His poetry and method of illuminated printing is directed towards uncovering an analogical language. Second, Blake's work can be read as a performative. Finally, Blake's work is at one and the same time immanent and transcendent, aiming to return all forms of divinity and the sacred to the human imagination, stressing that 'all deities reside in the human breast,' but it also stresses that the human has powers or potentials that transcend experience and judgement: deities reside in the human breast. These three claims are explored through the concept of incarnation: the incarnation of ideas in words and images, the incarnation of words in material books and their copies, the incarnation of human actions and events in bodies, and the incarnation of spirit in matter.

This volume presents the state of the art in digital scholarly editing. Drawing together the work of established and emerging researchers, it gives pause at a crucial moment in the history of technology in order to offer a sustained reflection on the practices involved in producing, editing and reading digital scholarly editions—and the theories that underpin them. The unrelenting progress of computer technology has changed the nature of textual scholarship at the most fundamental level: the way editors and scholars work, the tools they use to do such work and the research questions they attempt to answer have all been affected. Each of the essays in *Digital Scholarly Editing* approaches these changes with a different methodological consideration in mind. Together, they make a compelling case for re-evaluating the foundation of the discipline—one that tests its assertions against manuscripts and printed works from across literary history, and the globe. The sheer breadth of *Digital Scholarly Editing*, along with its successful integration of theory and practice, help redefine a rapidly-changing field, as its firm grounding and future-looking ambit ensure the work will be an indispensable starting point for further scholarship. This collection is essential reading for editors, scholars, students and readers who are invested in the future of textual scholarship and the digital humanities.

With the rise of far-reaching technological innovation, from artificial intelligence to Big Data, human life is increasingly unfolding in digital lifeworlds. While such developments have made unprecedented changes to the ways we live, our political practices have failed to evolve at pace with these profound changes. In this path-breaking work, Mathias Risse establishes a foundation for the philosophy of technology, allowing us to investigate how the digital century might alter our most basic political practices and ideas. Risse engages major concepts in political philosophy and extends them to account for problems that arise in digital lifeworlds including AI and democracy, synthetic media and surveillance capitalism and how AI might alter our thinking about the meaning of life. Proactive and profound, *Political Theory of the Digital Age* offers a systemic way of evaluating the effect of AI, allowing us to anticipate and understand how technological developments impact our political lives – before it's too late.

In the halls of Congress, on the streets, in the media, the war on fast food is on. Tofu may be topical, but bacon is eternal. *Bacon and Egg Man*, Ken Wheaton's second novel, is a sly send-up of a politically correct food establishment, where the Northeast has split off from the rest of the United States. The new Federation is ruled by the electoral descendants of King Mike, a man who made it his mission to form a country based on good, clean living. But you can't keep good food down. And Wes Montgomery, a journalist at the last print paper in the Federation, is a mild-mannered bacon-and-egg dealer on the side. Until he gets pinched and finds himself thrust into Chief Detective Blunt's wild-eyed plot to bring down the biggest illegal food supplier in the land. To make matters

worse, Wes is partnered with Detective Hillary Halstead, the cop who, while undercover, became his girlfriend. Their journey takes them from submarine lairs to sushi speakeasies, from Montauk to

Manhattan, where they have to negotiate with media magnate the Gawker before a climactic rendezvous with the secretive man who supplies the Northeast with its high-cholesterol contraband, the most eternal of all breakfast foods: bacon and eggs.
