On the hottest summer afternoons when desert creatures look for shade and stay close to the earth and keep their voices low I sit high on a cactus and fling my loud ringing trill out to the sun... So sings the Cactus Wren, one of the ten desert creatures that speaks for itself in the evocative and lyrical verses of Desert Voices. In both text and illustration, Desert Voices conveys a message of spirit and courage from the shy and quiet creatures of the beautiful desert land.

A fresh new look for this modern classic by the Newbery-Award winning and bestselling author of Where the Mountain Meets the Moon Pacy is back! The beloved heroine of The Year of the Dog and The Year of the Rat has returned in a brand new story. This summer, Pacy's family is going to Taiwan for an entire month to visit family and prepare for their grandmother's 60th birthday celebration. Pacy's parents have signed her up for a Chinese painting class, and at first she's excited. This is a new way to explore her art talent! But everything about the trip is harder than she thought it would be--she looks like everyone else but can't speak the language, she has trouble following the art teacher's instructions, and it's difficult to make friends in her class. At least the dumplings are delicious... As the month passes by, Pacy eats chicken feet (by accident!), gets blessed by a fortune teller, searches for her true identity, and grows closer to those who matter most.

Can your students process and respond to information quickly? Academic standards call for increased rigor, but simply raising complexity is not enough. Students need to be able to process information quickly and respond to situations with fluency and accuracy. As teachers become better at planning and providing practice sessions that build these skills, students become more adept at using new knowledge and processes swiftly and accurately. Fluent thinking is crucial for success on the SAT, ACT, and other timed testing situations. Practicing Skills, Strategies, & Processes:

Classroom Techniques to Help Students Develop Proficiency explores explicit techniques for mastering this crucial strategy of instructional practice. It includes: * Explicit steps for implementation * Recommendations for monitoring students' ability to develop fluent thinking * Adaptations for students who struggle, have special needs, or excel in learning * Examples and nonexamples from classroom practice * Common mistakes and ways to avoid them The Essentials for Achieving Rigor series of instructional guides helps educators become highly skilled at implementing, monitoring, and adapting instruction. Put it to practical use immediately, adopting day-to-day examples as models for application in your own classroom.

Traditionally, small-group math instruction has been used as a format for reaching children who struggle to understand. Math coach Kassia Omohundro Wedekind uses small-group instruction as the centerpiece of her math workshop approach, engaging all students in rigorous "math exchanges." The key characteristics of these mathematical conversations are that they are: 1) short, focused sessions that bring all mathematical minds together, 2) responsive to the needs of the specific group of mathematicians, and 3) designed for meaningful, guided reflection. As in reading and writing workshop, students in Kassia's math workshop are becoming self-directed and independent while participating in a classroom community of learners. Through the math exchanges, students focus on number sense and the big ideas of mathematics. Teachers guide the conversations with small groups of students, mediating talk and thinking as students share problem-solving strategies, discuss how math works, and move toward more effective and efficient approaches and greater mathematical understanding. Although grounded in theory and research, Math Exchanges is written for practicing teachers and answers such questions as the following: How can I use a math workshop approach and follow a certain textbook or set of standards? How should I form small groups? and How often should I meet with small groups? What should I focus on in small groups? How can I tell if my groups are making progress? What do small-group math exchanges look like, sound like, and feel like?
