drawn from across local councils in England, Ray Tomkinson explains the implications of sharing service delivery, addresses concerns about loss of control and accountability, and demonstrates the potential advantages. He shows how to set up collaborative ventures, formal partnerships, shared service centres or special purpose vehicles, while pointing out possible

pitfalls, thus enabling senior managers to follow all the necessary project steps to create an appropriate shared service. It seeks to examine the evidence of the cost, effectiveness and quality improvements achieved from sharings. This ground-breaking book has been written for everyone in local government; it explores the political and cultural barriers, and legislative/leg

al framework for joint workings, explains how to find an appropriate governance vehicle, and how to gain the commitment of partners. It deals with political and managerial concerns, risk aversion and parochial issues, and the possible impact on the reputation and performance of both sharers. Shared Services in Local Government is the only comprehensive study for the

UK and it will ensure any public sector organization pursuing this route is able to approach the task of creating a shared service with a real understanding of the issues involved. Improving corporate functions using shared services Springer

exploring the rising prominence of outsourcing with a multi-dimensional, contextual perspective. *Shared Services as a New Organizational Form* IGI Global

"One of the ways companies are looking for competitive advantage in this frenetic [business] environment .

. . . is through the use of a tactical technique called shared services. . . . In this book, we bridge [the] chasm between the theory of how a shared services operation 'ought to' work and the practical issues involved in how to make it work, how to carry out a successful implementation of a shared service operation in your business."- from the Preface. Gaining

competitive advantage in today's fierce business environment requires focus throughout the company on value, as measured by quality, cost, speed, and service. In the quest for superior performance, a growing number of companies are now turning to shared services, a tactical technique by which corporations can organize financial and other transaction-oriented activities to

reduce costs and provide better service to business unit partners. Written by four authorities, three PricewaterhouseCoopers consultants and the executive who has directed the shared service efforts at Lucent Technologies, this comprehensive resource-the first of its kind-examines shared services from the macro issues that compel senior management to embrace this approach

through the design and implementation of a shared services environment that leads to increased customer and shareholder value. Of all the tools available for gaining competitive advantage, why shared services? One of the principal reasons is that it creates, through consolidation of often disparate activities, more of a "one company" feel among business

units. The benefits of this are twofold: one, it enables companies to show a consistent face to clients and customers, vendors and suppliers, shareholders and potential shareholders; two, it provides increased flexibility to all of the business' operations, allowing corporate leaders to maintain a global perspective while at the same time allowing

business unit leaders to take strong, customer-focused actions. Providing both a domestic and global view, Shared Services addresses the full spectrum of issues, including: * Assessing whether shared services is right for you- issues to consider, goals to be reached. * Getting started- building support, establishing an effective organization, instituting

continuous communication. * Setting up the infrastructure-billing shared services to business units, dealing with tax and legal entity issues. * International challenges-complexity, time zone, legal issues, currency stability, and security. * Program and project management-structures, planning, execution, and control. A groundbreaking book that examines a timely and important

topic, Shared Services is an accessible and thorough guide to what could be a critical component in achieving long-term business success. This comprehensive resource is the first to introduce, explain, and explore shared services, an innovative business strategy that involves centralizing various business units, including accounting and transactional

operations, to reduce costs and increase customer satisfaction. Presenting a practical and easy-to-follow blueprint for the smooth and sound implementation of shared services in your organization, *Shared Services: Adding Value to the Business Units* covers all the fundamentals, from how to get started to proper management techniques. *The Complete Business Process Handbook*

Harvard Business Press Business Process Management (BPM) has become one of the most widely used approaches for the design of modern organizational and information systems. The conscious treatment of business processes as significant corporate assets has facilitated substantial improvements in organizational performance but is also used to ensure the

conformance of corporate activities. This Handbook presents in two volumes the contemporary body of knowledge as articulated by the world's leading BPM thought leaders. This first volume focuses on arriving at a sound definition of Business Process Management approaches and examines BPM methods and process-aware information systems. As such, it provides

guidance for the integration of BPM into corporate methodologies and information systems. Each chapter has been contributed by leading international experts. Selected case studies complement these views and lead to a summary of BPM expertise that is unique in its coverage of the most critical success factors of BPM.

This second edition includes extended and completely revised chapters on process identification, process discovery, qualitative process analysis, process redesign, process automation and process monitoring. A new chapter on BPM as an enterprise capability has been added, which expands the scope of the book to encompass

topics such as the strategic alignment and governance of BPM initiatives. Students and professionals from both business management and computer science will benefit from the step-by-step style of

the textbook and its focus on fundamental concepts and proven methods. Lecturers will appreciate the class-tested format and the additional teaching material available on the accompanying website. IT Savvy The Stationery Office Most large companies worldwide today have some kind of shared services concept in place. Over half of the medium and

large companies are currently engaged in some kind of shared service project activity. The investment in shared services is always calculated in millions. In other words, the costs of getting it right (or getting it wrong) can be huge. Tom Bangemann's book is a concise blueprint for identifying, assessing, designing, implementing and improving the process for shared services in the

finance and accounting function. The author focuses on critical success factors, the people issues involved, and learning from other people's big mistakes. The book includes a variety of real life examples and real benchmarking data, performance metrics and best practices. The section on implementation is based on a proven five-phase methodology and explains the steps and activities involved as

well as showing examples of the deliverables and the results you can expect. Any CEO, MD, CFO, Finance Director and senior finance people will find this book a 'must-have' guide to the process before they start and an excellent benchmark against which to measure the performance of any existing shared service operation.

evaluate a shared services program Shared services, a form of "internal outsourcing," enables corporations to achieve economies of scale by creating a separate entity within the company to perform specific internal services, such as payroll, accounts payable, travel and expense processing, etc. Essentials of Shared Services provides a

quick, concise overview of shared services fundamentals, bringing senior-level executives up to speed so that they make the right decision. Bryan Bergeron provides a foundation of shared services from a historical, economic, technical, and customer perspective, showing how shared services can impact a corporation's bottom line, both long and short term. He delivers

specific recommendations that can be used to establish and manage a shared services effort and includes a variety of examples of programs that work and those that do not.

"The benefits Carrefour achieved have been substantially in excess of predictions. The Shared Service accounting centers enabled

streamlined processes, lowered costs, and introduced standard processes, a standard system, and standard data for a global company. The new infrastructure can support rapid expansion and can add new stores with the flip of a switch. From a systems point of view, Carrefour now has a 'factory' in place to deliver high-efficiency systems, tools, processes, and training."

--From Chapter 9, Implementation and Operational Imperatives for ERP "The benefits of efficient information delivery are demonstrated by the results of one of the world's largest mySAP.com implementations. Siemens achieved a twenty-five percent cost reduction through streamlined information delivery and improved access to financial information. It also enhanced its reporting

capabilities from seventy percent to nearly 100 percent through increased intranet availability." -- From Chapter 3, Financial and Management Reporting Research shows that high-performance businesses and governments use finance technology as one of the capabilities to help executives make better decisions for resource allocation, while at the

same time increasing productivity. CFO Insights: Enabling High Performance through Leading Practices for Finance ERP includes a number of case studies and lessons learned from Accenture clients across a variety of industries that have implemented, upgraded, and operated Oracle/People Soft and SAP. Each case study highlights vital thoughts, benefits, and considerations and provides

relevant guidance as one proceeds with an ERP on the journey toward high performance. **Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations for 2006** Springer Nature Built on independent research and financial audits of a number of newly created Shared Service Centers (SSCs) in Poland, Local

Shared Services and Outsourcing: A Contemporary Outlook Rector-

Duncan Corporate services provide often vital support to the delivery of effective and efficient public services, and cover such areas as finance and accounting, human resources, procurement, information technology, facilities and estates management. Sir Peter Gershon's review of public sector efficiency (available on the HM Treasury website, <http://www.hm>

<p>- treasury.gov.uk/media/C/A/efficiency_review120704) identified benefits from shared services, but found that departments' efficiency targets did not include savings specifically from shared corporate services. This NAO report has been conducted to take account of developments between the 2004 Spending Review (Cm.6237, ISBN 97801016227</p>	<p>28) and the 2007 Comprehensive Spending Review (Cm. 7227, ISBN 0101722729) on shared services and focuses mainly on finance and human resources, which are generally the more developed areas of shared service in the public sector. The publication is divided into four parts, and looks at general and specific areas, including: the potential of shared services in the</p>	<p>public sector; the problems of customer satisfaction experienced by the NHS and HM Prison Service with shared services; the variable progress across government; the lack of a clear overview from the Cabinet Office on shared services. The NAO has also set out 9 recommendations, including: public bodies should streamline their corporate service processes in line with best</p>
--	--	---

practice; they should also improve how they analyse the performance of their corporate services and whether there are more cost-effective ways to obtain such services; Departments should increase public transparency of corporate service performance. Common Cause: Shared Services for Human Resources Dorrance Publishing Corporate services provide vital

support to the delivery of effective and efficient public services. They include activities such as finance and accounting, human resources, procurement, information technology, facilities management and estates management. Shared services are designed to improve efficiency and service quality by combining such activities across different parts of an organisation, or across separate

organisations. The Cabinet Office has estimated the cost of finance and human resources functions across government as £7 billion a year. It believes there is scope to save in the order of £1.4 billion annually through the use of shared services. This report examines the Cabinet Office's efforts to improve corporate functions using shared services, as well as the impact of two

of the more established public sector shared services in the NHS and the Prison Service. NHS Shared Business Services is a joint venture between the Department of Health and Xansa PLC selling procurement, finance and accounting services to 89 NHS organisations out of a total of 416 potentially eligible NHS bodies. It is not yet making a profit and has paid no dividend to

either the Department of Health or Xansa. It needs to attract a further 22 customers simply to break even, and approximately 180 more customers to deliver its forecast savings to the taxpayer of £250 million by 2014-15. HM Prison Service's Shared Services Centre provides finance, procurement and human resources services to all 128 Prison

establishments, and the system is now working well. *The CFO as Business Integrator* Wiley The Complete Business Process Handbook is the most comprehensive body of knowledge on business processes with revealing new research.
