This textbook provides
a detailed overview of
industry-specific
business management
and technology

management practices in aerospace for relevant bachelors and MBA programs. The Aerospace Business: Management and Technology sequentially addresses familiar management disciplines such as production management, labor relations, program management, business law, quality assurance, engineering management, supply-chain management, marketing, and finance, among others. In this context it analyzes and discusses the distinctive perspective and requirements of the aerospace industry. The book also includes subjects of special interest such as government intervention in the sector and strategies

to deal with the environmental impact of aircraft. As each chapter deals with a separate management discipline, the material reviews the historical background, technical peculiarities, and financial factors that led the aerospace industry to evolve its own distinct practices and tradition. Theoretical bases of the practices are explained, and the chapters provide actual examples from the industry to illustrate application of the theories. The material is compiled, organized, and analyzed in ways that often provide original perspectives of the subject matter. University students, particularly in programs oriented towards aviation and aerospace

management, will find the book to be directly applicable to their studies. It is also extremely appropriate for aerospace MBA and executive MBA programs, and would suit specialized corporate or government training programs related to aerospace.

The Hydrographic

Journal Springer Nature
The privatization of defence assets and the outsourcing of military services from the armed forces to the private sector is an increasing trend. This book approaches the issue of military privatization by linking it to the transformation of the defence industries since the early 1990s, and shows the extent to which many military functions and activities, ranging

from military research to military consulting/training to operational support services, have already been outsourced in the US and in Europe. This detailed study provides new and updated information on the ongoing privatization of the defence sector and offers an original theoretical explanation as to why the most modern armed forces throughout the world have come increasingly to rely on private companies for nearly everything they do. Contributing to a better understanding of military privatization and its close connection to technological change, the book explains the complexity of the whole phenomenon and discusses its implications for

national and international security.

World Highways

Kogan Page Publishers
The Atlas of the Hoverflies of Greece is the first of a kind within the Mediterranean region. It is the result of decades of research, many travels into the fascinating habitats of Greece (a biodiversity hotspot), visits to world museums, and many people's passion for hoverflies. The Atlas is a concise presentation of all 418 hoverfly species for Greece known so far. The species are documented with photos and distribution GIS-maps and they are preceded by a general introduction on the hoverflies and Greek nature, and a generic key. The Atlas of the Hoverflies of Greece is

a handbook for insect aficionados, students and teachers, everyone interested in nature, and managers and conservationists aiming at raising public awareness of a nature nowadays threatened more than ever.

"With limited resources and increasing competition, managing strategic accounts requires a focused strategy, plan, and process. Developed collaboratively with world-class sales forces, the Large Account Management Process provides an enduring framework for protecting and growing your most important customer relationships."- Damon Jones, COO, Miller

Heiman, Inc."The Large Account Management Process has implemented a discipline that allows people to work together and communicate, setting strategies and sales goals that benefit both our customers and our own company."- Joseph L Cash, senior vice president of sales, Equifax Corporation"Miller Heiman's Large Account Management Process delivers a disciplined process for gathering the information required to really understand the trends impacting our largest clients. This critical information defines the strategies that provide long-term customer value and drive consistently superior business results."- Paul

Wichman, vice president and senior division sales manager, Schwab Institution'The New Successful Large Account Management' now in its third edition, is thoroughly revised and updated and takes into consideration recent changes in the industry. This hard-hitting and no-nonsense book advises you how to best manage your most important business accounts. The authors of the best-selling books The New Strategic Selling and The New Conceptual Selling provide comprehensive and practical lessons that will help you to protect and improve your most crucial customer relationships. By following their clearly defined and dynamic approach to the

account planning process, you will learn how to devise a strategic action plan to manage your key accounts; manage them effectively and profitably; build long term client relationships; climb ahead of competitors and move your relationship up the buy-sell hierarchy. Whatever business you're in, this excellent book shows you how to protect those crucial accounts that you can't afford to lose.

YSEC Yearbook of Socio-Economic Constitutions 2020
Business Information Agency
Using empirical data from the supply chain of aerospace, beverages and retail this text develops an original framework, the 'cascade effect', to

explain changes in industrial concentration. This provides an original insight into the determinants of industrial structure and has vital implications for firms and policy-makers in developing countries.

Atlas of the Hoverflies of Greece

Springer Science & Business Media
A Nobel Prize-winning physicist's "funny, clever, entertaining" account of the history of particle physics and the hunt for a Higgs boson (Library Journal). In this extraordinarily accessible and witty book, Leon Lederman—"the most engaging physicist since the late, much-missed Richard Feynman" (San Francisco Examiner)—offers a

fascinating tour that takes us from the Greeks' earliest scientific observations through Einstein and beyond in an inspiring celebration of human curiosity. It ends with the quest for the Higgs boson, nicknamed the God Particle, which scientists hypothesize will help unlock the last secrets of the subatomic universe. This is not only an enlightening journey through baryons and hadrons and leptons and electrons—it also “may be the funniest book about physics ever written” (The Dallas Morning News). “One of the clearest, most enjoyable new science books in years . . . explains the entire history of physics and cosmology. En route, you’ll laugh so hard you won’t realize how

much you are learning.” —San Francisco Examiner
 “The story of the search for the ultimate constituents of matter has been told many times before, but never with more verve and wit. . . . His hilarious account of how he helped persuade President Reagan to approve the construction of the Super Collider is itself worth the price of the book.” —Los Angeles Times

Aviation Week & Space Technology

John Wiley & Sons

This book presents the very first, interdisciplinarily grounded, comprehensive appraisal of a future “Common European Law on Investment Screening”. Thereby, it provides a foundation

for a European administrative law framework for investment screening by setting out viable solutions and evaluating their pros and cons. Daimler, the harbour terminal in Zeebrugge, or Saxo Bank are only three recent examples of controversially discussed company takeovers in Europe. The “elephant in the room” is China and its “Belt and Road Initiative”. The political will in Europe is growing to more actively control investments flowing into the EU. The current regulatory initiatives raise several fundamental, constitutional and regulatory issues. Surprisingly, they have not been addressed in any depth so far. The

book takes stock of the current rather fragmented regulatory approaches and combines contributions from leading international academics, practitioners, and policy makers in their respective fields. Due to the volume’s comprehensive approach, it is expected to influence the broader debate on the EU’s upcoming regulation of this matter. The book is addressed to participants from academia as well as to representatives from government, business, and civil society. *Asia-Pacific Defence Reporter* The Rosen Publishing Group, Inc Through careful analysis of the archaeological record, close reading of

ancient sources, and deep investigations into the languages of our past, this study demonstrates the importance of the influence of the cult of Acheloius on Thales, fundamentally changing our understanding of the origin of the philosophical experience in 6th century Ionia.

**Universal
Cyclopædia and
Atlas** Routledge

Until the publication of the first edition of 'Star Maps,' books were either general histories of astronomy using examples of antiquarian celestial maps as illustrations, or catalogs of celestial atlases that failed to trace the flow of sky map development over time. The second edition focuses on the

development of contemporary views of the heavens and advances in map-making. It captures the beauty and awe of the heavens through images from antiquarian celestial prints and star atlases. This book uniquely combines a number of features: 1) the history of celestial cartography is traced from ancient to modern times; 2) this development is integrated with contemporary cosmological systems; 3) the artistry of sky maps is shown using beautiful color images from actual celestial atlases and prints; 4) each illustration is accompanied by a legend explaining what is being shown; and 5) the text is written for the lay reader based on the author's

experience with writing articles for amateur astronomy and map collector magazines. This updated second edition of 'Star Maps' contains over 50 new pages of text and 44 new images (16 in color), including completely new sections on celestial frontispieces, deep-sky objects, playing card maps, additional cartographers, and modern computerized star maps. There is also expanded material about celestial globes, volvelles, telescopes, and planets and asteroids.

Star Maps Routledge
This book is designed as a working tool for the study and practice of European competition law. It is an enlarged and updated fifth edition of the highly practical

guide to the leading cases of European competition law. This fifth edition focuses on Article 101 TFEU, Article 102 TFEU and the European Merger Regulation. In addition it explores the public and private enforcement of competition law, the intersection between intellectual property rights and competition law, the application of competition law to state action and state aid laws. Each chapter begins with an introduction which outlines the relevant laws, regulations and guidelines for each of the topics, setting the analytical foundations for the case entries. Within this framework, cases are reviewed in summary form, accompanied by analysis and

commentary. Praise for the book 'This book should be in the library of every competition law practitioner and academic. The summary of cases is first class. But what makes it really stand out is the quality of the commentary and the selection of the material which includes not only the most important European judgements and decisions but also some of the leading cases from the US and European Member States.' Ali Nikpay, Gibson, Dunn & Crutcher LLP 'The study of EU Competition law requires the analysis and understanding of a number of increasingly complex European Commission and European Court decisions. Through the

provision of case summaries, excerpts from the important passages and concise commentary linking these decisions to other key case law and Commission documents, this unique and impressive book, now in its fifth edition, provides the student and practitioner of EU competition law with an extremely clear and useful introduction to these leading decisions.' Dr Kathryn McMahon, Associate Professor, School of Law, University of Warwick 'This book is especially valuable for competition law specialists in Europe and abroad who are interested in the jurisprudence and policy of the European Union and its member states. Familiarity with the European regime is

essential for proficiency in competition law today, and this volume provides an excellent foundation.' William E Kovacic, Global Competition Professor of Law and Policy, George Washington University Law School, Former Chairman, US Federal Trade Commission 'The Guide is an invaluable tool for both students and practitioners. It provides a compact overview on the fundamental cases and highlights the essential problems in a clear and sharp analysis.' Dr Christoph Voelk, Antitrust Practice Group, McDermott, Will & Emery LLP, Brussels Jane's Defence Industry HMH
The Yearbook on Space Policy is the reference publication analyzing

space policy developments. Each year it presents issues and trends in space policy and the space sector as a whole. Its scope is global and its perspective is European. The Yearbook also links space policy with other policy areas. It highlights specific events and issues, and provides useful insights, data and information on space activities. The Yearbook on Space Policy is edited by the European Space Policy Institute (ESPI) based in Vienna, Austria. It combines in-house research and contributions of members of the European Space Policy Research and Academic Network (ESPRAN), coordinated by ESPI. The Yearbook

is designed for government decision-makers and agencies, industry professionals, as well as the service sectors, researchers and scientists and the interested public.

Signal Springer

An expert review of recent progress in the study of turbulent flows with a focus on recently identified organized structures. This book reviews the recent progress in the study of the turbulent flows that sculpt the Earth's surface, focusing in particular on the organized structures that have been identified in recent years within turbulent flows. These coherent flow structures can include eddies or vortices at the scale of individual grains, through structures that scale

with the flow depth in rivers or estuaries, to the large-scale structure of flows at the morphological or landform scale. These flow structures are of wide interest to the scientific community because they play an important role in fluid dynamics and influence the transport, erosion and deposition of sediment and pollutants in a wide variety of fluid flow environments.

Scientific knowledge of these structures has improved greatly over the past 20 years as computational fluid dynamics has come to play an increasing important part in building our understanding of coherent flow structures across a broad range of scales. Chapters comprise a

series of major, invited papers and a selection of the most novel, innovative papers presented at the second Coherent Flow Structures Conference held August 3-5, 2011 at Simon Fraser University in Burnaby, British Columbia. Chapters focus on six major themes:

- Dynamics of coherent flow structures (CFS) in geophysical flows
- Interaction of turbulent flows, vegetation and ecological habitats
- Coherent structure of atmospheric flows
- Numerical modeling of coherent flow structures
- Turbulence in open channel flows
- Coherent flow structures, sediment transport and morphological feedbacks.

Atlas von achtzehn lithographirten Tafeln zu der Abhandlung: Die devonischen Aviculiden Deutschlands

Archaeopress Publishing Ltd
A unique look at European Network Enabled Capabilities (NEC) and their implications for transatlantic co-operation in future operations. Gordon Adams and Guy Ben-Ari identify the key requirements for

improvement of Europe's abilities as an international actor. They focus on national and collaborative, as well as existing and planned, networks. They clearly show the reader how, with the removal of the risks of Soviet invasion, European defence planners must now modify their strategies and capabilities to address new threats, both at home and overseas. They also show why future operations within international coalitions will require network-based capabilities that can interoperate. Europe possesses a technological and industrial base adequate to supply such capabilities, and its defence strategies are gradually being modified to emphasize

expeditionary forces operations within coalition settings. However, much remains to be done. This volume tackles the key challenges facing European nations who need to operate alongside each other and with their North American allies more effectively and efficiently. This book will be of great interest to all students of European affairs and politics, international relations and military and strategic studies. Strategic Digest BRILL This book analyzes the rise of China's naval power and its possible strategic consequences from a wide variety of perspectives – technological, economic, and geostrategic – while employing a historical-comparative approach

throughout. Since naval development requires huge financial resources and mostly takes place within the context of transnational industrial partnerships, this study also consciously adopts an industry perspective. The systemic problems involved in warship production and the associated material, financial, technological, and political requirements currently remain overlooked aspects in the case of China. Drawing on first-hand working experience in the naval shipbuilding industry, the author provides transparent criteria for the evaluation of different naval technologies' strategic value, which other researchers can draw upon as a basis for

further research in such diverse fields as International Security Studies, Naval Warfare Studies, Chinese Studies, and International Relations. The Advertising Red Books Routledge The World's Most Powerful Submarines features 52 of the most significant submarines built, from the German U-9 through the USS Ray and huge Japanese I-400 class of World War II, to the great nuclear-powered submarines of the Cold War. Also included are the latest attack and ballistic missile submarines. Each entry includes a brief description of the submarine's development and history, a color profile view or cutaway, key features, and specifications. Packed

with more than 200 artworks and photographs, *The World's Most Powerful Submarines* is a colorful guide for the military and naval history enthusiasts.
