Paras Medical Publisher

There are very few radiology multiple choice question books on the market that reflect the current trends and developments in the field of imaging. Hence, the emphasis of this book is on cross-sectional CT and MR imaging. It highlights the current understanding and concepts in the state-of-the-art imaging of a wide range of diseases in the body. The multiple choice questions are organised according to body systems and imaging modalities. There are twelve sections in

the book, testing the reader in a broad range of imaging knowledge. The questions are accompanied by expanded answers, which provide the reader with a summary of the key facts relating to a particular topic. This is especially useful in assisting the reader in consolidating his or her understanding of the subject. The questions are devised in a format similar to those encountered in the Part 2A examination of the Royal College of Radiologists (UK) and the Part 2

examinations of the Joint Australian and New Zealand College of Radiology. Candidates taking the American Radiology Board examinations will also find the book informative.

The radiological abnormalities associated with suspected child abuse can be extremely subtle. If missed, a baby or child may be returned to an environment where episodes of abuse may escalate. Similarly, a wrongful diagnosis can lead to an infant being removed from loving carers. This atlas will be of particular use to radiologists (both in training and at consultant level), and also to other doctors who may be first in line to encounter suspected abuse, including paediatricians, accident and emergency doctors,

orthopaedic surgeons and pathologists. It uses numerous radiographs from Professor Hall's collection amassed over three decades, including many examples of the sorts of difficult cases and normal variants that are found in day to day practice. It offers assistance with the initial interpretation of what are often difficult and subtle findings in the emotionally charged environment that frequently exists when child abuse is suspected.
