 ...The geometrical study of a surface M in Euclidean space R^3
 separates into three distinct categories: the intrinsic geometry of
 M , the shape of M in R^3 , and the Euclidean geometry of R^3 .
 Geometry of R^3 is based on the dot product and consists of
 those concepts preserved by the isometries of R^3 . The chapter
 emphasizes that the geometry of M is also based on the dot
 product—applied only to vectors tangent to M —and that it
 consists of those features preserved by the isometries of
 M . Elementary Differential Geometry | ScienceDirect Elementary
