arms technologies will blur established “lanes” within the S&T and PEO/PM community □ Emerging technologies promise to radically change the nature of how we define the relationship between Soldiers and small arms. In particular, robotic platforms and exoskeletons could provide disruptive

Envisioning the Deep Future of Small Arms 2022-2042A new lightweight polymer-cased ammunition system is being developed that could bring the U.S. Military's small arms into the 21st century. Is this the future for the military (and possibly sportsmen)? A company called Textron Systems has developed and is now testing a new kind of ammunition designed to reduce a combat soldier's payload.

Is Polymer Ammunition the Future of Military Small

Arms?The Lightweight Small Arms Technologies (LSAT) program is funded by the U.S. Joint Service Small Arms Program, with the goal of significantly reducing the weight of small arms and their ammunition. Following a series of military programs to investigate advances in small arms ( SPIW , Future Rifle, ACR , OICW ), the LSAT program is the US military 's latest project to replace existing US small arms.
