Neoconservatism is the movement that has provided the intellectual foundation for the resurgence of American conservatism in our time. And if neoconservatism can be said to have a father or an architect, that person is Irving Kristol. Neoconservatism is the most comprehensive selection of Kristol's influential writings on politics and economics, as well as the best of his now-famous essays on society, religion, culture, literature, education, and - above all - the "values" issues that have come to define the neo-conservative critique of contemporary life. These essays provide an unparalleled insight into the 50-year development of Kristol's social and political ideas, from an uneasy socialism tempered with religious orthodoxy, to a vigilant optimism about the future of the American experiment. Those already familiar with Kristol's work will especially enjoy the new autobiographical essay that introduces this volume; it is sprinkled with personal recollections about such luminaries as Lionel Trilling, Leo Strauss, Saul Bellow, Sidney Hook, Daniel Patrick Moynihan, and historian Gertrude Himmelfarb (who is also Mrs. Kristol). Those relatively new to Kristol's writings will be treated

to some of the most lucid, insightful, entertaining, and intellectually challenging essays of our time.

Gets Them Engaged. Keeps Them Engaged. Blitzer's philosophy: present the full scope of mathematics, while always (1) engaging the student by opening their minds to learning (2) keeping the student engaged on every page (3) explaining ideas directly, simply, and clearly so they don't get lost when studying and reviewing. First, he gets students engaged in the study of mathematics by highlighting truly relevant, unique, and engaging applications. He explores math the way it evolved: by describing real problems and how math explains them. In doing so, it

answers the question When will I ever use this? Then, Blitzer keeps students engaged by ensuring they don't get lost when studying. Examples are easy to follow because of a three-step learning system -- See it, Hear it, Try it embedded into each and every one. He literally walks the student through each example by his liberal use of annotations -- the instructor's voice that appears throughout.
