 It is written expressly to support the use of MATLAB as a part of an introductory course in automatic control systems. The objective is to introduce the user to some of the capabilities of MATLAB, and the associated Control System Toolbox, so that it can be used to aid in the design and analysis of control systems.

Power System Analysis - Saadat
 MATLAB is the natural environment for analysis, algorithm prototyping, and application development. MATLAB is now the international standard for high level mathematical computing. Industry and academia worldwide are utilizing the powerful features that MATLAB offers in a wide range of application areas.

 This course provides an introduction to the classical methods and modern techniques in power system analysis with the aid of a personal computer. Topics include: the concepts of complex power, balanced three-phase circuits, transmission line parameters, transmission line performance and compensation, system modeling and per-unit

analysis,...
