### **MEASUREMENTS OF STANAG 5069 AND STANAG 4539 WAVEFORMS WITH ...**

Stanag 4539 STANAG 4539 or MIL-STD-188-110B /C Appendix C is a HDR (110B) / MDR (110C) serial PSK / QAM signal that can reach speeds up to 9600 bps (12800 bps with no interleaving). In 110B, this was designated as High Data Rate, but in 110C, this

mode was recategorized Medium Data Rate. STANAG 4539 - Signal Identification WikiThe STANAG 4539 waveform includes tone excision whereby suppression of up to 4 tones is possible. The inclusion of tone excision improves the waveform resilience and performance in the presence of channel interference. STANAG 4539 | RapidM stanag 4538 - technical standards for an automatic

radio control system (arcs) for hf communication links
