 WATT Working for Advanced Transmission Technologies What if we could deliver more electricity to end-users over the existing transmission grid, at very little additional cost? We aim to reduce the \$6 billion a year customers are paying for transmission congestion by bringing new technologies to market. WATT was established by the companies who have developed...
 WATT - Working for Advanced Transmission Technologies
 A modern transmission infrastructure would include emerging technologies such as large-scale variable power sources and advanced energy storage devices. For example, it could smooth the variability of power from remotely located intermittent renewable resources 11 and maintain reactive power 12 on the system.

 Advanced Television Systems Committee (ATSC) standards are an American set of standards for digital television transmission over terrestrial, cable and satellite networks. It is largely a replacement for the analog NTSC standard and, like that standard, is used mostly in the United States, Mexico, Canada, and South Korea.
 Several former NTSC users, in particular Japan, have not used ATSC during ...
