 Control System Engineering provides students with the necessary
 foundation in analyzing the concepts of control systems. The main
 objective of the book is to enable the students to clearly
 understand the method of solving the control system problems.

EXAMPLE PROBLEMS AND SOLUTIONS A-8-1. Consider a system whose closed-loop transfer function is (This is the same system considered in Problem A-6-8.) Clearly, the closed-loop poles are located at $s = -2$ and $s = -5$, and the system is not oscillatory. (The unit-step response, however, is oscillatory.)

Control System Problems: Formulas, Solutions, and Simulation Tools Next we apply transformations 1 and 3 to the loop that contains the transfer function as feedback and get the following block diagram:

$X(s) = H_3(s)$ Similarly, by applying transforms 1 and 3 we obtain the simplified block diagram that represents the system's transfer function.
